History repeats itself as the Battles of Lexington and Concord play out in modern-day Virginia. The Virginia National Guard is ordered to Culpeper County to impose gun confiscation on a defiant population. Culpeper County has declared itself a Second Amendment sanctuary and the popular sheriff there has deputized hundreds of citizens to defend their right to keep and bear arms. Scenes of desperate fighting on social media galvanize support for the deputized citizens. Reinforcements arrive as thousands of people travel from around Virginia and surrounding states. The news media and BLM also converge on Culpeper County, directed by powerful forces behind the scenes. As the fighting escalates, everyday Americans are forced to pick a side, and to decide for themselves how far they will go to defend their values and their way of life. **BLOOD OF TYRANTS**, *Watering the Tree of Liberty*, is a fast-paced action thriller inspired by true events and the fifty-six men who signed the Declaration of Independence, pledging their lives, their fortunes and their sacred honor to the cause of liberty.

The Orthodox Church's reverence for Mary the Mother of God can be a stumbling block for converts, and a fulfilling relationship with her can prove elusive for converts and lifelong Orthodox Christians alike. In this deeply personal but beautifully universal memoir, Brandi Willis Schreiber relates her own quest to know and love the Virgin Mary and to incorporate her as a vital participant in her spiritual life. Brandi's sparkling, vulnerable account invites the reader to join her in this quest.

Reflectance spectroscopy is the investigation of the spectral composition of surface-reflected radiation with respect to its angularly dependent intensity and the composition of the incident primary radiation. Two limiting cases are important: The first concerns regular (specular) reflection from a smooth surface, and the second diffuse reflection from an ideal matte surface. All possible variations are found in practice between these two extremes. For the two extreme cases, two fundamentally different methods of reflectance spectroscopy are employed: The first of these consists in evaluating the optical constants  $n$  (refractive index) and  $x$  (absorption index) from the measured regular reflection by means of the Fresnel equations as a function of the wave  $A$ . This rather old and very troublesome procedure, which is length incapable of very accurate results, has recently been modified by Fahren fort by replacing the air-sample phase boundary by the phase boundary between a dielectric of higher refractive index ( $n$ ) and the sample ( $n$ ). 1 2 If the sample absorbs no radiation and the angle of incidence exceeds a certain definite value, total reflection occurs. On close optical contact between the two phases, a small amount of energy is transferred into the less dense phase because of diffraction phenomena at the edges of the incident beam. The energy flux in the two directions through the phase boundary caused by this is equal, however, so that 'total reflection takes place.

Christopher Shaw, the book's author said, "Through preferential postage rates for nonprofits the Postal Service facilitates civic involvement and a healthy democracy." Nader also noted, "Postal employees are fairly remunerated in an increasingly low-wage, low benefit 'Wal-Mart' economy." According to Nader, "Post offices serve as the heart of community life in neighborhoods and towns nationwide and the presence of postal workers on community streets make them safer, as the many beneficiaries of their frequently heroic efforts attest." "The lack of citizen-consumers' involvement in the recently passed postal reform legislation has highlighted the need for a public dialogue about the future of our postal system. The book provides a starting point for that conversation," stated Nader.

Traditionally, the Orthodox Church has appointed forty days of rest and seclusion after childbirth for mothers to recover from the rigors of birth and get to know their new babies. In the modern world, it can be difficult to understand how to use this time to the fullest in the way it was intended. The authors of *A Sacred Beginning*—a therapist and a pediatrician who are both mothers themselves—come to the rescue with a resource that addresses the spiritual, emotional, and physical aspects of a mother's recovery from birth and embarkation on her new life. Whether you are preparing to birth your first baby or your tenth, you will find in this book a wealth of spiritual food, comfort, encouragement, and sound advice to guide you, one postpartum day at a time.

Matrix metalloproteinases (MMPs) are members of an enzyme family and are critical for maintaining tissue allostasis. MMPs can catalyze normal turnover of the extracellular matrix (ECM) together with other metalloproteinases such as ADAM (a disintegrin and metalloproteinase) and ADAMTS (a disintegrin and metalloproteinase with thrombospondin motif) families. MMP activity is also regulated by a group of endogenous proteins called tissue inhibitor of metalloproteinases (TIMPs). All these proteins have a pivotal role involving ECM remodelling in normal physiological processes such as wound healing, embryogenesis, angiogenesis, bone remodelling, immunity, and the female reproductive cycle. An imbalance in the expression or activity of MMPs can also have important consequences in diseases such as cancer, cardiovascular disease, peripheral vascular disease, chronic leg ulcers, and multiple sclerosis. In recent years, MMPs have been found to play an important role in the field of precision medicine, as they may serve as biomarkers that may predict an individual's disease predisposition, state, or progression. MMPs are also thought to be a sensible target for molecular therapy. The aim of this Special Issue is to explore the most recent findings in this field that may have an impact in healthcare systems.

As an intricate association between a fungus and one or more green algae or cyanobacteria, lichens are one of the most successful examples of symbiosis. These fascinating organisms survive extreme desiccation and temperatures. They are adapted to a great variety of habitats, from deserts to intertidal zones, from tropical rain forests to the peaks of the Himalayas and to circumpolar ecosystems. Lichens are extremely efficient accumulators of atmospherically deposited pollutants, and are therefore widely used to monitor environmental pollution. Their wide range of secondary products show pharmaceutically interesting fungicidal, antibacterial and antiviral properties. Lichens are extremely difficult to culture. This manual provides well-tested tissue culture protocols, protocols for studying lichen ultrastructure, (eco)physiology, primary and secondary compounds, and for using lichens as bioindicators.

In this real life spy saga, James E. David reveals the extensive and largely hidden interactions between NASA and U.S. defense and intelligence departments. The story begins with the establishment of NASA in 1958 and follows the agency through its growth, not only in scope but also in complexity. In *Spies and Shuttles*, David digs through newly declassified documents to ultimately reveal how NASA became a strange bedfellow to the Department of Defense (DoD) and the Central Intelligence Agency (CIA). He tracks NASA's early cooperation—supplying cover stories for covert missions, analyzing the Soviet space program, providing weather and other scientific data from its satellites, and monitoring missile tests—that eventually devolved into NASA's reliance on DoD for political and financial support for the Shuttle. David also examines the restrictions imposed on such activities as photographing the Earth from space and the intrusive review mechanisms to ensure compliance. The ties between NASA and the intelligence community have historically remained unexplored, and David's riveting book is the first to investigate the twists and turns of this labyrinthine relationship.

In this volume, international experts describe biological, ecological, economic and social aspects of planted forests. Representative types of planted forests are described and discussed, technical and social aspects are considered, and case studies depict the variety of purposes and uses of planted forests. Authors discuss the nature of planted forests of representative species world-wide, basic biology and ecology of plantations, and economic and social considerations in landscapes where planted forests contribute to potentially sustainable societies. The authors represent temperate and tropical forests, developed and developing nations, and all levels of intensity of planting and managing forest trees. This compilation of views and viewpoints about planted forests provides a fresh, broad outlook on trees planted for myriad purposes. Forest scientists and managers, policy experts, development officials and interested citizens will find information of value and stimuli for thinking about forests of the future. **Fluorescence Microscopy for Disease Diagnosis and Environmental Monitoring** Springer Science & Business Media

abundance. Not only does this currency actually grow on trees, but it comes from animals, books, thoughts, and each of us! And that is what makes data curation so essential. The abundance of digital research data challenges library and information science professionals to harness this flow of information streaming from research discovery and scholarly pursuit and preserve the unique evidence for future use. Volume One of Curating Research Data explores the variety of reasons, motivations, and drivers for why data curation services are needed in the context of academic and disciplinary data repository efforts. Twelve chapters, divided into three parts, take an in-depth look at the complex practice of data curation as it emerges around us. Part I sets the stage for data curation by describing current policies, data sharing cultures, and collaborative efforts currently underway that impact potential services. Part II brings several key issues, such as cost recovery and marketing strategy, into focus for practitioners when considering how to put data curation services in action. Finally, Part III describes the full lifecycle of data by examining the ethical and practical reuse issues that data curation practitioners must consider as we strive to prepare data for the future. Digital data is ubiquitous and rapidly reshaping how scholarship progresses now and into the future. The information expertise of librarians can help ensure the resiliency of digital data, and the information it represents, by addressing how the meaning, integrity, and provenance of digital data generated by researchers today will be captured and conveyed to future researchers.
