While collecting his thoughts on Islam, author Ashraf Nubani soon came to realize that while Islam has often been misunderstood in public discourse, it has a powerful message to offer in the marketplace of ideas. Bridging the Gap: Islam's Challenge for America is meant to do just what the title suggests: build a bridge between Islam and Western principles that leads to a bigger, much needed discussion. Through use of the tenets of Islam, Nubani wants to reframe Western values in a way that can accentuate and foster human dignity. By having a firm grasp of the core beliefs of Islam, Nubani believes we can have a deeper and more realized appreciation of the United States. In this collection of topics, Bridging the Gap addresses and discusses many issues such as: Understanding the root of violence and addressing it with a fresh mindset. Defining the role of men and women in society. Reforming the criminal justice system. In Bridging the Gap, Ashraf Nubani hopes to draw

attention to both Islam and western values; showing how they can be used to improve our lives.

Bridging the gap that separates the two cultures of academia and policymaking is the central purpose of this pathbreaking study. George examines six U.S. strategies toward Iraq in 1988-1991. He urges policymakers to make better use of scholarly knowledge and challenges scholars to develop the types of knowledge that can be employed effectively by

policymakers .

This book illustrates how social media platforms enable us to understand everyday politics and evaluates the extent to which they can foster accountability, transparency and responsiveness. The first part focuses on accountability and tests whether the offline behavior of politicians is consistent with their online declarations, showing that textual analysis of politicians ' messages is useful to explain phenomena such as endorsements, party splits and appointments to cabinet. The second part concerns responsiveness. By means of sentiment analysis, it investigates the shape of the

interaction between citizens and politicians determining whether politicians' behavior is influenced by the pressure exerted on social media both on policy and non-policy issues. Finally, the book evaluates whether a responsive behavior is successful in restoring online political trust, narrowing the gap between voters and political elites. The book will be of use to students, scholars and practitioners interested in party organization, intra-party politics, legislative politics, social media analysis and political communication, as well as politicians themselves.

This book aims to bridge the gap between engineers' and architects' understanding of structural form. Its intention is to inspire the development of innovative and viable structures. It presents case studies where imaginative structural forms are in harmony with the architectural concept and at the same time present very efficient solutions to technical and structural problems.

This book provides theoretical clarity about the concepts of failed and fragile states, which have emerged strongly since the 9/11 attacks. Recent contributions often see the fragile state as either a problem of

development or of security. This volume argues that that neither perspective on its own is a sufficient basis for good policy. In a wide-ranging treatment, drawing on large samples as well as case studies, the authors create an alternative model of the fragile state emphasizing the multidimensional, multifaceted nature of the "fragile state problematique". On the basis of their model and empirical evidence, they then derive a number of policy-relevant insights regarding the need for contextualized and ongoing country analysis, the perils and pitfalls of unstructured development assistance, and the need to move whole-of-government approaches from the realm of rhetoric to reality. In offering both a synthesis of existing research and an innovative

approach to understanding the fragile state, this volume will be of great interest to students of war and conflict studies, risk, conflict management, and international relations in general. It will also be of use to practitioners in policy circles and to NGOs.

This popular book helps students make the

transition from their undergraduate experience to law school learning. Unlike other "introduction to law school" texts, Bridging the Gap offers a different approach because it: Explains the "why" of law, providing students with the context necessary to understand why law school is taught in a certain manner. Explains the "how" of the law, setting out a step-by-step process that will help students adapt to the law school setting. Explains the "what" of the law, giving students the opportunity to practice the problem-solving process by providing numerous exercises in a variety of subject matter areas. Rather than giving only general advice, or black letter law and some practice problems for a specific subject, Bridging the Gap provides the context, the process, and the problems.

Written by two former law school professors who used these techniques with thousands of students, *Bridging the Gap* is a guide to what really works in law school.

The Second Edition of *Bridging the Achievement Gap: What Successful Educators and Parents Do* includes 11 examples of K-12 high performing public schools which serve mostly African American students. The book argues that school district leaders with low performing schools should consider what these high performing schools do in their planning to reverse the on-going trend of relatively low academic performance of African American students. Included in the Solution Chapter

is the rationale for state legislation to provide funding for students who are low performing, but may not qualify for current funding for low income students. Also included in that chapter is the actual legislative language currently under consideration by the California State Legislature. The book contains other supporting research on this topic.

Treating Athletes with Eating Disorders

Universitätsverlag Potsdam

Eating disorders (EDs) affect at least 11 million people in the United States each year and spread across age, race, ethnicity and socio-economic class. While professional literature on the subject has grown a great deal in the past 30 years, it tends to be exclusively research-based and lacking expert clinical commentary on treatment. This volume focuses on just such commentary, with

chapters authored by both expert clinicians and researchers. Core issues such as assessment and diagnosis, the correlation between EDs and weight and nutrition, and medical/psychiatric management are discussed, as are the underrepresented issues of treatment differences based on gender and culture, the applications of neuroscience, EDNOS, comorbid psychiatric disorders and the impact of psychiatric medications. This volume uniquely bridges the gap between theoretical findings and actual practice, borrowing a bench-to-bedside approach from medical research. Includes real-world clinical findings that will improve the level of care readers can provide, consolidated in one place. Underrepresented issues such as gender, culture, EDNOS and comorbidity are covered in full. Represents outstanding scholarship, with each chapter written by an expert in the topic area.

Bridging the Gap Cengage Learning

From its very beginning, in June 1842, the Protestant Mission in Gabon included men and women of African descent—African Americans, Americo-Liberians, and West Africans—all teachers and advanced students from the Cape Palmas (Liberia) Mission, who transferred with the mission to its new location on the Gaboon estuary. All came voluntarily and wholeheartedly. They served as teachers, evangelists, preachers, and printers, building the early foundation of Christianity in Gabon. Many eventually returned to their homelands, but others stayed for the duration of their lives, assimilating into the local community. This book celebrates the contribution of persons of African descent who served with the mission from 1834 until 1891, a time of complex and controversial race relations in America, which seeped into mission relations overseas. Private missionary correspondence and

journals reveal the interrelationships, roles, and contributions of these individuals, and also the underlying perceptions of nationality, race, and gender. One must grieve the injustices evident in the stories, yet marvel at the giftedness, faith, determination and commitment of those who served, often with no official recognition. I introduce you to Mr. B. V. R. James, Lavinia Sneed, Charity Sneed Menkel, Mary Harding, and others—may their stories inspire you!

The UN Environment Emissions Gap Report assesses the latest scientific studies on current and estimated future greenhouse gas emissions and compares these with the emission levels permissible for the world to progress on a least-cost pathway to achieve the goals of the Paris Agreement. This difference between “where we are likely to be and where we

need to be” is known as the ‘emissions gap’. The report explores some of the most important options available for countries to bridge the gap.

For more than a century, no US adversary or coalition of adversaries - not Nazi Germany, Imperial Japan, or the Soviet Union - has ever reached sixty percent of US GDP. China is the sole exception, and it is fast emerging into a global superpower that could rival, if not eclipse, the United States. What does China want, does it have a grand strategy to achieve it, and what should the United States do about it? In *The Long Game*, Rush Doshi draws from a rich base of Chinese primary sources, including decades worth of party

documents, leaked materials, memoirs by party leaders, and a careful analysis of China's conduct to provide a history of China's grand strategy since the end of the Cold War. Taking readers behind the Party's closed doors, he uncovers Beijing's long, methodical game to displace America from its hegemonic position in both the East Asia regional and global orders through three sequential "strategies of displacement." Beginning in the 1980s, China focused for two decades on "hiding capabilities and biding time." After the 2008 Global Financial Crisis, it became more assertive regionally, following a policy of "actively accomplishing something." Finally, in the aftermath populist elections of 2016, China shifted to an even more aggressive strategy for undermining US hegemony,

adopting the phrase "great changes unseen in century." After charting how China's long game has evolved, Doshi offers a comprehensive yet asymmetric plan for an effective US response. Ironically, his proposed approach takes a page from Beijing's own strategic playbook to undermine China's ambitions and strengthen American order without competing dollar-for-dollar, ship-for-ship, or loan-for-loan.

The correctness of model transformations is a crucial element for the model-driven engineering of high quality software. A prerequisite to verify model transformations at the level of the model transformation specification is

that an unambiguous formal semantics exists and that the employed implementation of the model transformation language adheres to this semantics. However, for existing relational model transformation approaches it is usually not really clear under which constraints particular implementations are really conform to the formal semantics. In this paper, we will bridge this gap for the formal semantics of triple graph grammars (TGG) and an existing efficient implementation. Whereas the formal semantics assumes backtracking and ignores non-determinism, practical implementations do not support backtracking, require rule sets that

ensure determinism, and include further optimizations. Therefore, we capture how the considered TGG implementation realizes the transformation by means of operational rules, define required criteria and show conformance to the formal semantics if these criteria are fulfilled. We further outline how static analysis can be employed to guarantee these criteria.

In the age of information, an essential priority in the context of international education is the development of language learning and its inconsistencies. The gap between language and education has intermittently grown through time, with

mistaken assumptions about how linguistic shortcomings are being solved around the world. Research on comparative educational approaches to teaching verbiage and the foundation of future language development are instrumental in positively impacting the global narrative of dialectal education. International Approaches to Bridging the Language Gap is a collection of innovative research on the methods and applications of second language teaching as well as social developments regarding intercultural learning. While highlighting topics including curricular approaches, digital competence, and linguistic disparities, this book is ideally designed for language instructors, linguists, teachers, researchers, public administrators, cultural centers,

policymakers, government officials, academicians, researchers, and students seeking current research on the latest advancements of multilingual education.

The word tribology was first reported in a landmark report by P. Jost in 1966 (Lubrication (Tribology)--A Report on the Present Position and Industry's Needs, Department of Education and Science, HMSO, London).

Tribology is the science and technology of two interacting surfaces in relative motion and of related subjects and practices. The popular equivalent is friction, wear and lubrication. The economic impact of the better understanding of tribology of two interacting surfaces in relative motion is known to be immense.

Losses resulting from ignorance of tribology amount in the United States alone to about 6 percent of its GNP or about \$200 billion dollars

per year (1966), and approximately one-third of the world's energy resources in present use, appear as friction in one form or another. A fundamental understanding of the tribology of the head-medium interface in magnetic recording is crucial to the future growth of the \$100 billion per year information storage industry. In the emerging microelectromechanical systems (MEMS) industry, tribology is also recognized as a limiting technology. The advent of new scanning probe microscopy (SPM) techniques (starting with the invention of the scanning tunneling microscope in 1981) to measure surface topography, adhesion, friction, wear, lubricant-film thickness, mechanical properties all on a micro to nanometer scale, and to image lubricant molecules and the availability of supercomputers to conduct atomic-scale simulations has led to the development of a new field referred to as Microtribology,

Nanotribology, or Molecular Tribology (see B.
