Closing the Opportunity Gap
National Academies Press

The achievement gap between white students and African American and Hispanic students has been debated by scholars and lamented by policymakers since it was first documented in 1966. The average black or Hispanic secondary school student currently achieves at about the same level as the average white student in the lowest quartile of white achievement. Black and

Hispanic students are much less likely than white students to graduate from high school, acquire a college or advanced degree, or earn a middle-class living. They are also much more likely than whites to suffer social problems that often accompany low income. While educators have gained an understanding of the causes and effects of the education achievement gap, they have been less successful in finding ways to eliminate it—until now. This book provides, for the first time in one place, evidence that the achievement gap can be bridged. A variety of schools and school reforms are boosting the achievement of black and Hispanic students to levels

nearing those of whites. Bridging the Achievement Gap brings together the findings of renowned education scholars who show how various states, school districts, and individual schools have lifted the achievement levels of poor and minority students. The most promising strategies include focusing on core academic skills, reducing class size, enrolling students in more challenging courses, administering annual achievement assessment tests, creating schools with a culture of competition and success, and offering vouchers in big-city school districts. While implementing new educational programs on a large scale is fraught with difficulties, these

successful reform efforts offer what could be the start of widespread effective solutions for bridging the achievement gap.

book, *Bridging the Gap*: Reading

Critically and Writing Meaningfully to Get to the Core, argues that memoir, or creative nonfiction, can help students bridge narrative structure and nonfiction writing in order to meet Common Core standards. The text includes information and resources on implementation for teachers.

Adaptation under Fire

Longman Publishing Group
Helps to ease the transition between school/college and university mathematics by (re)introducing readers to a

range of topics that they will meet in the first year of a degree course in the mathematical sciences, refreshing their knowledge of basic techniques and focussing on areas that are often perceived as the most challenging. Each chapter starts with a "Test Yourself" section so that readers can monitor their progress and readily identify areas where their understanding is incomplete. A range of exercises, complete with full solutions, makes the book ideal for self-study.

This book presents the proceedings of the XXII International Conference on Industrial Engineering and Operations Management, International IIE Conference 2016, and International AIM Conference 2016. This joint conference is a result of an agreement between ADINGOR (Asociación para el Desarrollo de la Ingeniería de Organización), ABEPRO (Associação Brasileira de Engenharia de Produção), AIM (European Academy for Industrial Management) and the IIE

(Institute of Industrial Engineers), and took place at TECNUN-School of Engineering (San Sebastián, Spain) from July 13th to 15th, 2016. The book includes the latest research advances and cutting-edge analyses of real case studies in Industrial Engineering and Operations Management from diverse international contexts, while also identifying concrete business applications for the latest findings and innovations in operations management and the decisions sciences. The use of cognitive science in creating stories, languages, visuals, and characters is known as narrative generation, and it has become a trending area of study. Applying artificial intelligence (AI) techniques to story development has caught the attention of professionals and researchers; however, few studies have inherited techniques used in previous literary methods and related research in social sciences. Implementing previous narratology theories to

current narrative generation systems is a research area that remains unexplored. *Bridging the Gap Between AI, Cognitive Science, and Narratology With Narrative Generation* is a collection of innovative research on the analysis of current practices in narrative generation systems by combining previous theories in narratology and literature with current methods of AI. The book bridges the gap between AI, cognitive science, and narratology with narrative generation in a broad sense, including other content generation, such as novels, poems, movies, computer games, and advertisements. The book emphasizes that an important method for bridging the gap is based on designing and implementing computer programs using knowledge and methods of narratology and literary theories. In order to present an organic, systematic, and integrated combination of both the fields to develop a new research area, namely post-narratology, this book has an important place in the creation of a new research area and has an impact on both narrative generation studies, including AI and cognitive science, and narrative studies, including narratology and literary theories. It is ideally designed for academicians, researchers, and students, as well as enterprise practitioners, engineers, and creators of diverse content generation fields such as advertising production, computer game creation, comic and manga writing, and movie production. Three experts on equity and technology offer concrete, evidence-based strategies for classroom teachers to move toward digital equity in K12 settings. Closing the Gap is an ISTE book series designed to reflect the contributions of multiple stakeholders seeking to ensure that digital equity is achieved on campuses, in classrooms, and throughout education. In this series, authors Nicol R. Howard, Sarah Thomas, and Regina

Schaffer offer historical and philosophical insights while exploring challenges and solutions unique to teacher preparation programs, pre-service and in-service teachers, and instructional coaches. The second title in the Closing the Gap series, this book includes:

- Examination of digital equity and the “problem of practice” for teachers and coaches
- Strategies for connecting the ISTE Educator and Student Standards to practice
- Discussion of

key challenges facing teachers in today’s classrooms, such as access, connectivity, limited resources, digital divide, and the homework gap

- Research-based vignettes from teachers who have encountered and conquered some of the challenges addressed in the book, and from edtech coaches who have implemented equity-centered innovative professional development

This book helps teachers address the challenges of

teaching in the digital age, providing positive examples and recommendations for achieving digital equity in their classroom communities.

Today's children are tomorrow's citizens. Good health and well-being in the early years are the foundations for well-adjusted and productive adult lives and a thriving society. But children are being let down in Australia

and elsewhere by the lack of knowledge transfer between the worlds of research, policy and practice.

Improving such transfer is the job of knowledge brokers - the various ways they can operate are explored in this book through case examples and the lessons learned from experienced proponents. The book concludes by posing three sets of ideas to shape the future of knowledge brokering.

This book provides a thorough overview of the concept of whole energy systems and the role of vector-coupling technologies (VCTs) in meeting long-term decarbonization strategies. It is the first comprehensive reference that provides basic definitions and fundamental, applicable approaches to whole energy systems analysis and vector-coupling technologies in a multidisciplinary way. Whole Energy Systems presents practical methods with evidence from applications to real-world and simulated coupled energy systems.

Sample analytical examples are provided to aid in the understanding of the presented methods. The book will provide researchers and industry stakeholders focused on whole energy systems, as well researchers and developers from different branches of engineering, energy, economics, and operation research, with state-of-the-art coverage and the latest developments in the field.

- Chronicles the first all-African American summit attempt on Denali, the highest point in North America
- Part

and part argument for the importance of inspiring future generations to value nature. The nation's wild places—from national and state parks to national forests, preserves, and wilderness areas—belong to all Americans. But not all of us use these resources equally. Minority populations are much less likely to seek recreation, adventure, and solace in our wilderness spaces. It's a difference that African American author James Mills addresses in his new book, *The Adventure Gap: Changing the Face of the Outdoors*. Bridging the so-called "adventure gap"

requires role models who can inspire the uninitiated to experience and enjoy wild places. Once new visitors are there, a love affair often follows. This is important because as our country grows increasingly multicultural, our natural legacy will need the devotion of people of all races and ethnicities to steward its care. In 2013, the first all-African American team of climbers, sponsored by the National Outdoor Leadership School (NOLS), challenged themselves on North America's highest point, the dangerous and forbidding Denali, in Alaska. Mills uses *Expedition Denali* and its team

members' adventures as a jumping-off point to explore how minority populations view their place in wild environments and to share the stories of those who have already achieved significant accomplishments in outdoor adventures—from Mathew Henson, a Black explorer who stood with Peary at the North Pole, to Kai Lightner, a teenage sport climber currently winning national competitions. The goal of the expedition, and now the book, is to inspire minority communities to look outdoors for experiences that will enrich their lives, and to encourage them toward greater environmental

stewardship. Narrative Medicine Springer Bridging the gap that separates the two cultures of academia and policymaking is the central purpose of this pathbreaking study. George examines six U.S. strategies toward Iraq in 1988-1991. He urges policymakers to make better use of scholarly knowledge and challenges scholars to develop the types of knowledge that can be employed effectively by policymakers. Bridging the Gap Between AI, Cognitive Science, and

Narratology With Narrative Generation Bridging the Achievement Gap What happens when you die? How does one transcend mankind to heavenly being, the known to the eternal mystery? One spring day in 1971, Calvin Cassady, a southwest Missouri teenager, was a victim in an unexplained automobile accident on a curvy Ozark mountain roadway. The impact caused the car that Calvin was a passenger in to burst into flames, plunging him into a clouded existence

that included a walk through the valley of the shadow of death, leaving him on the threshold of eternal life. Eternity surrounded him and filled him with an absolute certainty of heaven. Standing before the Master and all his creation Calvin became troubled with the vision of his judgment and the life that he brought with him. Consumed with feelings of emptiness, he needed fulfillment. Bridging the Gap is the story of that miraculous event and the life of fulfillment that followed. Experience that fulfillment through Calvin's spouse, his children, his students, his friends, and through the lives of total strangers as they became players in the great spiritual adventures of his life. Observe as the Holy Spirit guides Calvin through natural disasters and serious health issues, and feel the love as he takes into the mission field. Bridging the Gap celebrates the ordinary and illustrates the extraordinary results that occur during a lifetime lived for Christ. While you continue your spiritual journey, remember that faith, hope, and love conquer all. May your journey be fruitful, and may God's peace be with you.

Every military must prepare for future wars despite not really knowing the shape such wars will ultimately take. As former U.S. Secretary of Defense Robert Gates once noted: "We have a perfect record in predicting the next war. We have never once gotten it right." In the face of such great uncertainty, militaries must be able to adapt

rapidly in order to win. *Adaptation under Fire* identifies the characteristics that make militaries more adaptable, illustrated through historical examples and the recent wars in Iraq and Afghanistan. Authors David Barno and Nora Bensahel argue that militaries facing unknown future conflicts must nevertheless make choices about the type of doctrine that their units will use, the weapons and equipment they will purchase, and the kind of leaders they will select and develop to guide

the force to victory. Yet after a war begins, many of these choices will prove flawed in the unpredictable crucible of the battlefield. For a U.S. military facing diverse global threats, its ability to adapt quickly and effectively to those unforeseen circumstances may spell the difference between victory and defeat. Barno and Bensahel start by providing a framework for understanding adaptation and include historical cases of success and failure. Next, they examine U.S. military adaptation during the

nation's recent wars, and explain why certain forms of adaptation have proven problematic. In the final section, Barno and Bensahel conclude that the U.S. military must become much more adaptable in order to address the fast-changing security challenges of the future, and they offer recommendations on how to do so before it is too late. **Bridging the Family Care Gap** McGraw Hill Professional In *Bridging the Gap from Rehab to Performance*, physical therapist Sue

Falsone walks the reader through the thought process and physical practice of guiding an injured athlete from injury through rehab and back to the field of play. To both health care professionals and strength and conditioning experts alike, she describes the path as her athletes move through pain and healing toward optimal function and advanced performance. Bridging the Opportunity Gap National Academies Press Bridging the Opportunity Gap offers an empowerment tool that investigates and analyzes the experiences of school

principals and the processes they underwent in their promotion from educator to principal. Author Dr. Danielle Hyles-Rainford interrogates the notion of career mobility in school systems. The purpose of this study is to explore actual career barriers that impede the mobility of aspiring educators, with a specific focus on race and gender, and also to give agency attributes and navigational tools to attain personal empowerment and systemic resiliency for career success. Previous research in the field of mobility and leadership in education has rarely brought together issues of race, gender and identity

politics with the notions of human, social and cultural capital accumulation. Bridging the Opportunity Gap explores a variety of closely related topics, including the impact of horizontal versus vertical mobility, the career community web, spiral and the traditional ladder, under-representation and overqualified candidates, and family/childrearing and its effects on promotion in different global contexts. Most importantly, it explores how to navigate a complex system like the public education system and gives individual and collective agency attributes for success, such as political astuteness, influential

mentorship, personal style, higher education, and superior job performance.

In this collective volume, we seek to bridge gaps between research and practice in the teaching and learning of English for Specific Purposes (ESP) with a set of strong research-based contributions drawing on a wide range of ESP contexts. It offers new theoretical and pedagogical insights for

ESP practitioners and researchers alike, going beyond descriptions of ESP situations and programmes to bring in sound research design and data analysis which are firmly anchored in previous ESP research. The nine papers in this collection cover a variety of ESP domains, from medicine, technical science, and engineering to social sciences and the humanities, in order to encapsulate current trends and new developments in

ESP teaching and learning research in Europe.

The Long Game Rowman & Littlefield

Today, most substance abuse treatment is administered by community-based organizations. If providers could readily incorporate the most recent advances in understanding the mechanisms of addiction and treatment, the treatment would be much more effective and efficient. The gap between research findings and everyday treatment practice represents an enormous

missed opportunity at this exciting time in this field. Informed by real-life experiences in addiction treatment including workshops and site visits, *Bridging the Gap Between Practice and Research* examines why research remains remote from treatment and makes specific recommendations to community providers, federal and state agencies, and other decision-makers. The book outlines concrete strategies for building and disseminating knowledge about addiction; for linking

research, policy development, and everyday treatment implementation; and for helping drug treatment consumers become more informed advocates. In candid language, the committee discusses the policy barriers and the human attitudes—the stigma, suspicion, and skepticism—that often hinder progress in addiction treatment. The book identifies the obstacles to effective collaboration among the research, treatment, and policy

sectors; evaluates models to address these barriers; and looks in detail at the issue from the perspective of the community-based provider and the researcher. [*International Approaches to Bridging the Language Gap R & L Education*](#) *Bridging the Multimodal Gap* addresses multimodality scholarship and its use in the composition classroom. Despite scholars' interest in their students' multiple literacies, multimodal composition is far from the norm in most writing classes. Essays explore how multimodality can be

implemented in courses and narrow the gap between those who regularly engage in this instruction and those who are still considering its scholarly and pedagogical value. After an introductory section reviewing the theory literature, chapters present research on implementing multimodal composition in diverse contexts. Contributors address starter subjects like using comics, blogs, or multimodal journals; more ambitious topics such as multimodal assignments in online instruction or digital story telling; and complex issues like assessment, transfer, and rhetorical awareness. *Bridging*
