Baruch Spinoza a Dutch rationalist philosopher of the 17th century and Donald Davidson one of the most distinguished contemporary American analytic philosophers, are two thinkers not usually analysed in conjunction with each other in the philosophical literature yet there are remarkable parallels in their thought. In this book Floris van der Burg identifies topics of comparison in the areas of ontology, epistemology, philosophy of mind and philosophy of language and, after explaining the theory of each philosopher, examines the parallel themes between Spinoza and Davidsonian theory. In the light of this comparison van der Burg shows that the staunch naturalism of Spinoza, even in the mental realm, should not be abandoned in modern times. Rather it is exactly what Spinoza lacks in this area, the linguistic turn in philosophy, characterised by Davidson, that allows for his naturalism to be salvaged after 300 years. Van der Burg's analysis culminates in his paving the way for a Spinozistic ethics for a Davidsonian philosophy.

The case studies in this book use authentic injury assessment examples to help readers link theory and clinical practice with the goal of becoming competent clinicians. The situations are realistic and present more than 130 of the injuries that athletic trainers may encounter in the real world. The questions that accompany the cases ask readers to identify clinical and differential diagnoses, critique the evaluating clinician's actions, recommend treatment, comment on ethical choices, and make many of the decisions they will face in the field. The cases encourage readers to think and problem solve; evidence-based answers (for select cases in the text and for all cases in the instructor's manual) ensure that the recommended clinical decisions are based on the best available research, clinical expertise, and patient preferences rather than on anecdotal practice.

This important book captures contemporary attempts to build bridges between the two very different disciplines of law and psychology and to establish

the true nature of the interaction between the two. Including international contributions from lawyers, psychologists, sociologists and criminologists, the book bridges the inherent gap between the practice of law and the profession of psychology at an international level. It throws light on how psychology connects with, inter alia, the courts, prisons, community care, clinics, long-stay hospitals, police investigations and legislative bodies. More recent contributions of social science to legal proceedings are also covered, such as the liability that arises from lack of crime prevention, or the systematic prediction of likely violence by an offender. The book will be essential reading not only for academics and professionals in psychology, the law and related disciplines wishing to understand the broadening base of psychology within the legal process, but also for students trying to form an understanding of the emerging science and the associated career opportunities for this exciting field.

This book answers a question which came about while the author was working on his diploma thesis [1]: would it be better to ask for the available bandwidth instead of probing the network (like TCP does)? The diploma thesis was concerned with long-distance musical interaction ("NetMusic"). This is a very peculiar application: only a small amount of bandwidth may be necessary, but timely delivery and reduced loss are very important. Back then, these requirements led to a thorough investigation of existing telecommunication network mechanisms, but a satisfactory answer to the question could not be found. Simply put, the answer is "yes" - this work describes a mechanism which indeed enables an application to "ask for the available bandwidth". This obviously does not only concern online musical collaboration any longer. Among others, the mechanism yields the following advantages over existing alternatives: • good throughput while maintaining close to zero loss and a small bottleneck queue length • usefulness for streaming media applications due to a very smooth rate • feasibility for satellite and wireless links • high scalability Additionally, a reusable framework for future

applications that need to "ask the network" for certain performance data was developed.

The book opens a very important debate for the family therapy field. At a time of treatment rationing and standard setting, it aptly draws our attention to an issue of increasing importance: training the highest-quality family therapists. In addition, it offers trainers and supervisors an invaluable "howto-do-it" guide to tried-and-tested methods of taking trainees through a programme of personal and professional development. Judy Hildebrand is known throughout the family therapy world who has always spoken for integrating formal aspects of personal development, and she has designed and run courses in Britain and Europe for many years. But the picture would be incomplete without understanding the effect that the exercises have on personal development, and for this volume she is joined by Collette Richardson and Frankie Zimmerman, two colleagues and ex-trainees, who have collated the experiences of a range of trainees from several courses and are able to complement Hildebrand's ideas with the voice of the trainee.

When we think of constitutional law, we invariably think of the United States Supreme Court and the federal court system. Yet much of our constitutional law is not made at the federal level. In *51 Imperfect Solutions*, U.S. Court of Appeals Judge Jeffrey S. Sutton argues that American Constitutional Law should account for the role of the state courts and state constitutions, together with the federal courts and the federal constitution, in protecting individual liberties. The book tells four stories that arise in four different areas of constitutional law: equal protection; criminal procedure; privacy; and free speech and free exercise of religion. Traditional accounts of these bedrock debates about the relationship of the individual to the state focus on decisions of the United States Supreme Court. But these explanations tell just part of the story. The book corrects this omission by looking at each issue-and some others as well-through the lens of many constitutions, not one constitution; of many courts, not one court; and of all American judges, not federal or state judges. Taken together, the stories reveal a remarkably complex, nuanced, ever-changing federalist system, one that ought to make lawyers and litigants pause before reflexively assuming that the United States Supreme Court alone has all of the answers to the most vexing constitutional questions. If there is a central conviction of the book, it's that an underappreciation of state constitutional law has hurt state and federal law and has undermined the appropriate balance between state and federal courts in protecting individual liberty. In trying to correct this imbalance, the book also offers several ideas for reform. [Spangenberg's Steam and Electrical Engineering in Questions and Answers](#) Routledge

Projective geometry is one of the most fundamental and at the same time most beautiful branches of geometry. It can be considered the common foundation of many other geometric disciplines like Euclidean geometry, hyperbolic and elliptic geometry or even relativistic space-time geometry. This book offers a comprehensive introduction to this fascinating field and its applications. In particular, it explains how metric concepts may be best understood in projective terms. One of the major themes that appears throughout this book is the beauty of the interplay between geometry, algebra and combinatorics. This book can especially be used as a guide that explains how geometric objects and operations may be most elegantly expressed in algebraic terms, making it a valuable resource for mathematicians, as well as for computer scientists and physicists. The book is based on the author's experience in implementing geometric software and includes hundreds of high-quality illustrations.
