In addition to the indisputably necessary electrification of the transport sector, which is currently being ramped up, internal combustion engines will still be urgently needed in the future. Otherwise, the demand for mobility in the on-road, off-road and non-road sectors cannot be met. There is no doubt that these internal combustion engines will have to be improved regarding efficiency plus lower emissions and nowadays more and more important upgraded for zero and low carbon fuels. Even though Spark Ignition (SI) engines have been around for more than a century, there is still a lot of room for improvement, particularly in terms of power density, ignition, combustion control, and preventing uncontrolled combustion. To offer all interested developers an inspiring exchange platform for the latest developments, IAV established two exciting conferences more than two decades ago, which are now held under the heading "Two Conferences - One Goal". This volume brings together the contributions to this conference.

Such diverse thinkers as Lao-Tze, Confucius, and U.S. Defense Secretary Donald Rumsfeld have all pointed out that we need to be able to tell the difference between real and assumed knowledge. The systematic review is a scientific tool that can help with this difficult task. It can help, for example, with appraising, summarising, and communicating the results and implications of otherwise unmanageable quantities of data. This book, written by two highly-respected social scientists, provides an overview of systematic literature

review methods: Outlining the rationale and methods of systematic reviews; Giving worked examples from social science and other fields; Applying the practice to all social science disciplines; It requires no previous knowledge, but takes the reader through the process stage by stage; Drawing on examples from such diverse fields as psychology, criminology, education, transport, social welfare, public health, and housing and urban policy, among others. Including detailed sections on assessing the quality of both quantitative, and qualitative research; searching for evidence in the social sciences; meta-analytic and other methods of evidence synthesis; publication bias; heterogeneity; and approaches to dissemination.

" Individual women ' s stories enliven almost every page " of this comprehensive illustrated reference, now updated, from the National Air and Space Museum (Technology and Culture). Women run wind tunnel experiments, direct air traffic, and fabricate airplanes. American women have been involved with flight from the beginning. But until 1940, most people believed women could not fly, that Amelia Earhart was an exception to the rule. World War II changed everything. " It is on the record that women can fly as well as men, " stated General Henry H. Arnold, commanding general of the Army Air Forces. Then the question became " Should women fly? " Deborah G. Douglas tells the story of this ongoing debate and its impact on American history. From Jackie Cochran, whose perseverance led to the formation of the Women ' s Army Service Pilots (WASP) during World War II to the more recent achievements of Jeannie Flynn, the Air Force ' s first woman fighter pilot and Eileen Collins, NASA ' s first woman shuttle commander, Douglas introduces a host of determined women who overcame prejudice and became military fliers, airline pilots, and air and space engineers. Not forgotten are stories of flight attendants, air traffic controllers, and mechanics. American Women and Flight since 1940 is a revised and expanded edition of a Smithsonian National Air and Space Museum reference work. Long considered the single best reference work in the field, this new edition contains extensive new illustrations and a comprehensive bibliography.

Who is The Shadow? How did he come to be? Master of Mystery: The Rise of The Shadow delves into the murky origins of perhaps the most significant media creation of all time. Between 1930 and 1954, The Shadow was a dominant figure in American popular culture. A multi-media sensation, he emerged from the creative cauldron of the earliest days of radio drama, and soon migrated to magazines, comic books, film and eventually paperback books. Only Superman and Batman, who were created a few years later, rivaled The Shadow in global public recognition. A century later, this enigmatic personality and his famous mantra, "Who knows what evil lurks in the hearts of men? The Shadow knows!" remains recognizable to new generations born long after his remarkable reign. Popular culture historian and novelist Will Murray explores radio's first superstar and talks to the writers and artists who took a nebulous radio personality and brought him to blazing life in the pages of more than 300 classic pulp novels. Packed with revelations, Master of Mystery reveals how The Shadow inspired the creation of Batman in 1939! Including rare interviews with Walter B. Gibson, Theodore Tinsley, John L. Nanovic, Graves Gladney and Edd Cartier.
