Advanced Topics in the Theory of Dynamical Systems covers the proceedings of the international conference by the same title, held at Villa Madruzzo, Trento, Italy on June 1-6, 1987. The conference reviews research advances in the field of dynamical systems. This book is composed of 20 chapters that explore the theoretical aspects and problems arising from applications of these systems. Considerable chapters are devoted to finite dimensional systems, with special emphasis on the analysis of existence of periodic solutions to Hamiltonian systems. Other chapters deal with infinite dimensional systems and the developments of methods in the general approach to existence and qualitative analysis problems in the general theory,

as well as in the study of particular systems concerning natural sciences. The final chapters discuss the properties of hyperbolic sets, equivalent period doubling, Cauchy problems, and quasiperiodic solitons for nonlinear Klein-Gordon equations. This book is of value to mathematicians, physicists, researchers, and advance students.

Cengage Learning Custom Solutions and South-Western proudly bring you Cases in Financial Management. This database consists of two sets of cases: the Klein-Brigham Cases and the Brigham-Buzzard Cases. Both sets of cases are available to create custom casebooks for use in undergraduate and graduate Corporate Finance courses. Cases in Financial Management can be packaged with any South-Western textbook, or serve as a standalone

casebook. You may even include your original materials in your custom casebook.

This volume includes the full proceedings from the 1982 Academy of Marketing Science (AMS) Annual Conference held in Las Vegas, Nevada. It provides a variety of quality research in the fields of marketing theory and practice in areas such as consumer behaviour, marketing management, marketing education, industrial marketing, and international marketing, among others. Founded in 1971, the Academy of Marketing Science is an international organization dedicated to promoting timely explorations of phenomena related to the science of marketing in theory, research, and practice. Among its services to members and the community at large, the Academy offers conferences, congresses and symposia that attract delegates from around the world. Presentations from these events are published in this Proceedings series, which offers a

comprehensive archive of volumes reflecting the evolution of the field.

Volumes deliver cutting-edge research and insights, complimenting the Academy's flagship journals, the Journal of the Academy of Marketing Science (JAMS) and AMS Review. Volumes are edited by leading scholars and practitioners across a wide range of subject areas in marketing science.

Clay Christensen's groundbreaking bestselling work in education now updated and expanded, including a new chapter on Christensen's seminal "Jobs to Be Done" theory applied to education. "Provocatively titled, *Disrupting Class* is just what America's K-12 education system needs--a well thought-through proposal for using technology to better serve students and bring our schools into the 21st Century. Unlike so many education 'reforms,' this is not small-bore stuff. For that reason alone, it's likely to be resisted by defenders of the status quo, even though it's necessary and right for our kids. We owe it to them to make sure this book isn't merely a terrific read; it

must become a blueprint for educational transformation." —Joel Klein, Chancellor of the New York City Department of Education "A brilliant teacher, Christensen brings clarity to a muddled and chaotic world of education." —Jim Collins, bestselling author of *Good to Great* "Just as iTunes revolutionized the music industry, technology has the potential to transform education in America so that every one of the nation's 50 million students receives a high quality education. *Disrupting Class* is a must-read, as it shows us how we can blaze that trail toward transformation." —Jeb Bush, former Governor of Florida According to recent studies in neuroscience, the way we learn doesn't always match up with the way we are taught. If we hope to stay competitive-academically, economically, and technologically—we need to rethink our understanding of intelligence, reevaluate our educational system, and reinvigorate our commitment to learning. In other words, we need "disruptive innovation." Now, in his long-awaited new book, Clayton M.

Christensen and coauthors Michael B. Horn and Curtis W. Johnson take one of the most important issues of our time-education-and apply Christensen's now-famous theories of "disruptive" change using a wide range of real-life examples. Whether you're a school administrator, government official, business leader, parent, teacher, or entrepreneur, you'll discover surprising new ideas, outside-the-box strategies, and straight-A success stories. You'll learn how: Customized learning will help many more students succeed in school Student-centric classrooms will increase the demand for new technology Computers must be disruptively deployed to every student Disruptive innovation can circumvent roadblocks that have prevented other attempts at school reform We can compete in the global classroom-and get ahead in the global market Filled with fascinating case studies, scientific findings, and unprecedented insights on how innovation must be managed, *Disrupting Class* will open your eyes to new possibilities, unlock hidden

potential, and get you to think differently. Professor Christensen and his coauthors provide a bold new lesson in innovation that will help you make the grade for years to come. The future is now. Class is in session.

Medical residents in hospitals are often required to be on duty for long hours. In 2003 the organization overseeing graduate medical education adopted common program requirements to restrict resident workweeks, including limits to an average of 80 hours over 4 weeks and the longest consecutive period of work to 30 hours in order to protect patients and residents from unsafe conditions resulting from excessive fatigue. *Resident Duty Hours* provides a timely examination of how those requirements were implemented and their impact on safety, education, and the training institutions. An in-depth review of the evidence on sleep and human performance indicated a need to increase opportunities for sleep during residency training to prevent

acute and chronic sleep deprivation and minimize the risk of fatigue-related errors. In addition to recommending opportunities for on-duty sleep during long duty periods and breaks for sleep of appropriate lengths between work periods, the committee also recommends enhancements of supervision, appropriate workload, and changes in the work environment to improve conditions for safety and learning. All residents, medical educators, those involved with academic training institutions, specialty societies, professional groups, and consumer/patient safety organizations will find this book useful to advocate for an improved culture of safety.

Getting the right diagnosis is a key aspect of health care - it provides an explanation of a patient's health problem and informs subsequent health care decisions. The diagnostic process is a complex, collaborative activity that involves clinical reasoning and information gathering to determine a patient's health problem. According to *Improving Diagnosis in Health Care*, diagnostic errors-inaccurate or delayed diagnoses-persist

throughout all settings of care and continue to harm an unacceptable number of patients. It is likely that most people will experience at least one diagnostic error in their lifetime, sometimes with devastating consequences. Diagnostic errors may cause harm to patients by preventing or delaying appropriate treatment, providing unnecessary or harmful treatment, or resulting in psychological or financial repercussions. The committee concluded that improving the diagnostic process is not only possible, but also represents a moral, professional, and public health imperative. Improving Diagnosis in Health Care, a continuation of the landmark Institute of Medicine reports To Err Is Human (2000) and Crossing the Quality Chasm (2001), finds that diagnosis-and, in particular, the occurrence of diagnostic errorsâ€"has been largely unappreciated in efforts to improve the quality and safety of health care. Without a dedicated focus on improving diagnosis, diagnostic errors will likely worsen as the delivery of health care and the diagnostic process continue to increase in complexity. Just as the diagnostic process is a collaborative activity, improving diagnosis will require collaboration and a widespread commitment to change among health care professionals, health care organizations, patients and their families, researchers, and policy makers. The recommendations of Improving Diagnosis in Health Care contribute

to the growing momentum for change in this crucial area of health care quality and safety. *Scientific and Technical Aerospace Reports* McGraw Hill Professional
When data from all aspects of our lives can be relevant to our health - from our habits at the grocery store and our Google searches to our FitBit data and our medical records - can we really differentiate between big data and health big data? Will health big data be used for good, such as to improve drug safety, or ill, as in insurance discrimination? Will it disrupt health care (and the health care system) as we know it? Will it be possible to protect our health privacy? What barriers will there be to collecting and utilizing health big data? What role should law play, and what ethical concerns may arise? This timely, groundbreaking volume explores these questions and more from a variety of perspectives, examining how law promotes or discourages the use of big data in the health care sphere, and also what we can learn from other sectors.

The chemical interaction of water and

rock is one of the most fascinating and multifaceted processes in geology. The composition of surface water and groundwater is largely controlled by the reaction of water with rocks and minerals. At elevated temperatures, hydrothermal features, hydrothermal ore deposits and geothermal fields are associated with chemical effects of water-rock interaction. Surface outcrops of rocks from deeper levels in the crust, including exposures of lower crustal and mantle rocks, often display structures that formed by interaction of the rocks with a supercritical aqueous fluid at very high pT conditions. Understanding water-rock interaction is also of great importance to applied geology and geochemistry, particularly in areas such as geothermal energy, nuclear waste repositories and applied hydrogeology. The extremely wide-ranging research efforts on the universal water-rock interaction process is reflected in the wide diversity of themes presented at the regular International Symposia on Water-Rock Interaction (WRI). Because of the large and widespread interest in

water-rock interaction, the European Union of Geosciences organized a special symposium on "water-rock interaction" at EUG10, the biannual meeting in Strasbourg 1999 convened by the editors of this volume. In contrast to the regular WRI symposia addressed to the specialists, the EUG 10 "water-rock interaction" symposium brought the subject to a general platform. This very successful symposium showed the way to the future of water-rock reaction research.

The tension between reason and revelation has occupied Jewish philosophers for centuries, who were committed, on the one hand, to defending Judaism, and, on the other hand, to remaining loyal to philosophical principles. Maimonides is considered the most prominent Jewish religious philosopher, whose aim was to reconcile philosophy, in particular Aristotelian philosophy, with the fundamental principles of Judaism. But many other Jewish thinkers, before and after him, also struggled with this task, raising the question whether it is possible

to attain this reconciliation. The connection between philosophy and religion was often not an obvious one. As a consequence, it could serve in some cases as grounds for supporting Maimonides' project, while in others it could lead to rejection. Scepticism and Anti septicism in Medieval Jewish Thought focuses on sceptical questions, methods, strategies, and approaches raised by Jewish thinkers in the Middle Ages. In a series of lectures, we examine the variety of attitudes presented by these thinkers, as well as the latest readings of contemporary scholars concerning those attitudes.

This book provides a critical analysis of the current state of knowledge on the relationship between family firms and a wide range of accounting choices, including earnings management, accounting conservatism, and financial and non-financial disclosure. In examining the choices made in family firms, the authors explore and elucidate the relevance of agency, socioemotional wealth, stewardship, and resource-based theories. Readers will also find close consideration of the impacts of a country's culture and societal values on accounting choices. In particular,

further evidence is provided on the impact of different cultures on accounting conservatism in family businesses. Finally, avenues for future accounting research on family firms are discussed, highlighting theoretical and empirical challenges. In addition to offering a revealing analysis of the influence of ownership types and cultures on accounting choices within family firms, the book identifies significant practical implications for the management of family firms and policy implications for regulators and standard setters.

Knowledge of the processes of educational change is said to be the missing ingredient in attempts to bring about educational innovation and reform. Whether these efforts involve grass roots innovation or large-scale societal reform, failure to understand and act on existing knowledge of the change process has accounted for the

widespread lack of success in making educational improvements. This volume analyzes what is known about successful or productive change processes, and identifies corresponding action strategies at the individual, school, local and state levels. Included in this book is a major treatment of the topic of the 'ethics of planned change', a neglected topic in recent literature, especially since strategies for intervening in the change process are receiving more attention. This book is intended to be used by teachers in training and in service, teacher trainers, educational researchers, education historians and administrators.

An interdisciplinary approach enables health care providers to work together. A logical, easy-to-follow organization covers information by intervention type, from least invasive to most invasive. Integration of interventions provides information in a clinically useful way, so it's easier to consider more than one type of treatment or intervention for low back pain, and easier to see which methods should be tried first. 155 illustrations include x-rays, photos, and drawings. Tables and boxes summarize key information. Evidence-based content allows you to make clinical decisions based on the ranking the best available scientific studies from strongest to weakest. Patient history and examination chapters help in assessing the patient's condition and in ruling out serious pathology before making decisions about specific interventions.-
