behind? Is it possible that history "overly remembers" some events at the expense of others? A landmark work in philosophy, Paul Ricoeur's *Memory, History, Forgetting* examines this reciprocal relationship between remembering and forgetting, showing how it affects both the perception of historical experience and the production of historical narrative. *Memory, History, Forgetting*, like its title, is divided into three major

sections. Ricoeur first takes a phenomenological approach to memory and mnemonical devices. The underlying question here is how a memory of present can be of something absent, the past. The second section addresses recent work by historians by reopening the question of the nature and truth of historical knowledge. Ricoeur explores whether historians, who can write a history of memory, can truly break with all dependence on

memory, including memories that resist representation. The third and final section is a profound meditation on the necessity of forgetting as a condition for the possibility of remembering, and whether there can be something like happy forgetting in parallel to happy memory. Throughout the book there are careful and close readings of the texts of Aristotle and Plato, of Descartes and Kant, and of Halbwachs and Pierre Nora. A

momentous achievement in the career of one of the most significant philosophers of our age, Memory, History, Forgetting provides the crucial link between Ricoeur's Time and Narrative and Oneself as Another and his recent reflections on ethics and the problems of responsibility and representation. " His success in revealing the internal relations between recalling and forgetting, and how this dynamic becomes problematic in light of events once present but now in the past, will inspire academic dialogue and response but also holds great appeal to educated general readers in search of both method for and insight from considering the ethical ramifications of modern events. . . . It is indeed a master work, not only in Ricoeur ' s own vita but also in contemporary European philosophy. " —Library Journal " Ricoeur writes the best kind of philosophy—critical, economical, and clear. " —New York Times Book Review

### The Spycraft Manual

HarperCollins

This book presents for the first time a history of Eretria during the Archaic Era, the city's most notable period of political importance and Keith Walker examines all the major elements of the city's success.

One of the key factors explored is Eretria's role as a pioneer coloniser in both the Levant and the West - its early Aegaen 'island empire' anticipates that of Athens by more than a century, and Eretrian shipping and trade was similarly widespread. Eretria's major, indeed dominant, role in the events of central

This book was

first published in 1991 and was well received by students, teachers and researchers in many universities and institutes in India and abroad. In the past 28 years (since its first publication), tremendous progress have been made in temperate fruit research, notably in developing varieties and rootstocks, canopy management, understanding the flowering physiology, storage technology, biological control of pests and diseases, resistance breeding, biotechnology, etc., Revision of the book with updated information was considered necessary. In the process of a comprehensive literature survey it was felt impossible to compile all the information in one volume. This enlarged edition on temperate fruits is, therefore, published in two volumes. The first volume consists of pome and stone fruits (apples, pears, peaches, plums, apricots and

---

cherries) in more than 550 pages. The second volume deals with temperate nuts and berries (almonds, chestnuts, hazelnuts, pecans, pistachios, walnut, strawberries, currants, gooseberries, raspberries, blueberries and cranberries) in about 650 pages. Apart from through revision with updated scientific information on various aspects of mentioned pome, stone, nuts and berries, substantial reorganization	of the text has been made. Emphasis has been laid to include released cultivars and rootstocks, recent trends in propagation and orchard management, pruning and canopy management, nutrition and tissue analysis, water management, improved technology for harvesting, postharvest handling, storage and ripening. Special emphasis has been laid to include the development in breeding and improvement	through biotech nological approaches like molecular markers, genetic transformation, genetic map and microbes for N and P input. Other information like organic production technology, protected cultivation and impact of climate change are included, where sufficient information is available. Though the subject is vast, this two volumes book presents the concepts in a condensed, informative and lucid manner.
