A complete reference on all aspects of landfill engineering including landfill characteristics, measuring, analysis and modelling of landfill behaviour, recycling materials and landfill design; this handbook is a vital source of information on current methods of landfill use and management. Environmental pressures and changes in legislation, such as the EU Landfill Directive, are forcing us to rethink our attitudes towards landfill. The necessity of diverting and separating biodegradable domestic waste from hazardous waste, as well as an increased emphasis upon recycling waste materials is changing the engineering properties of landfill, which are a function not only of their physical characteristics, but also the chemistry of degradation. Increasing government pressure to redevelop brownfield land is driving the redevelopment of closed landfill sites, prompting engineers to reconsider the disposal of waste in new sites to enable their safe redevelopment in the future. This is a significant challenge; the engineering questions are considerable and have not been addressed in the literature to date. This book is an essential reference on the engineering of landfill materials, providing safe solutions to engineering problems from the construction and development of new landfill facilities, to the reuse and development on closed sites.

This latest volume in the World Yearbook of Education series examines the relationship between assessment systems and efforts to advance equity in education at a

time of growing inequalities. It focuses on the political motives behind the expansion of an assessment industry, the associated expansion of an SEN industry and a growth in consequential accountability systems. Split into three key sections, the first part is concerned with the assessment industry, and considers the purpose and function of assessment in policy and politics and the political context in which particular assessment practices have emerged. Part II of the book, on assessing deviance, explores those assessment and identification practices that seek to classify different categories of learners, including children with Limited English Proficiency, with special needs and disabilities and with behavioural problems. The final part of the book considers the consequences of assessment and the possibility of fairer and more equitable alternatives, examining the production of inequalities within assessment in relation to race, class, gender and disability. Discussing in detail the complex historical intersections of assessment and educational equity with particular attention to the implications for marginalised populations of students and their families, this volume seeks to provide reframings and reconceptualisations of assessment and identification by offering new insights into economic and cultural trends influencing them. Co-edited by two internationally renowned scholars, Julie Allan and Alfredo J. Artilles, *World Yearbook of Education 2017* will be a valuable resource for researchers, graduates and policy makers who are interested in the economic trends of global education assessment.

The authors trace the emergence of Ataturk and Reza Shah through the constitutional revolutions in Iran and the Ottoman Empire, which led to the introduction of European social models, the establishment of dictatorship and of secularist reforms. This produced in both Turkey and Iran highly authoritarian, nationalist, and quasi-westernised states, where the personality cult of the leader defined the politics of each country."
