For the first time, middle readers can learn the complete story of the courageous girl whose life, which ended through the effects of war, inspired a worldwide call for peace. In this book, author Sue DiCicco and Sadako's older brother Masahiro tell her complete story in English for the first time--how Sadako's courage throughout her illness inspired family and friends, and how she became a symbol of all people, especially children, who suffer from the impact of war. Her life and her death carry a message: we must have a wholehearted desire for peace and be willing to work together to achieve it. Sadako Sasaki was two years old when the atomic bomb was dropped on her city of Hiroshima at the end of World War II. Ten years later, just as life was starting to feel almost normal again, this athletic and enthusiastic girl was fighting a war of a different kind. One of many children affected by the bomb, she had contracted leukemia. Patient and determined, Sadako set herself the task of folding 1000 paper cranes in the hope that her wish to be made well again would be granted. Illustrations and personal family photos give a glimpse into Sadako's life and the horrors of war. Proceeds from this book are shared equally between The Sadako Legacy NPO and The Peace Crane Project.

As seen in Time, USA TODAY, The Atlantic, The Wall Street Journal, and on CBS This Morning, BBC, PBS, CNN, and NPR, iGen is crucial reading to understand how the children, teens, and young adults born in the mid-1990s and later are vastly different from their Millennial predecessors, and from any other generation. With generational divides wider than ever, parents, educators, and employers have an urgent need to understand today's rising generation of teens and young adults. Born in the mid-1990s up to the mid-2000s, iGen is the first generation to spend their entire adolescence in the age of the smartphone. With social media and texting replacing other activities, iGen spends less time with their friends in person—perhaps contributing to their unprecedented levels of anxiety, depression, and loneliness. But technology is not the only thing that makes iGen distinct from every generation before them; they are also different in how they spend their time, how they behave, and in their attitudes toward religion, sexuality, and politics. They socialize in completely new ways, reject once sacred social taboos, and want different things from their lives and careers. More than previous generations, they are obsessed with safety, focused on tolerance, and have no patience for inequality. With the first members of iGen just graduating from college, we all need to understand them: friends and family need to look out for them; businesses must figure out how to recruit them and sell to them; colleges and universities must know how to educate and guide them. And members of iGen also need to understand themselves as they communicate with their elders and explain their views to their older peers. Because where iGen goes, so goes our nation—and the world.

From legendary playwright August Wilson comes the powerful, stunning dramatic bestseller that won him critical acclaim, including the Tony Award for Best Play and the Pulitzer Prize. Troy Maxson is a strong man, a hard man. He has had to be to survive. Troy Maxson has gone through life in an America where to be proud and black is to face pressures that could crush a man, body and soul. But the 1950s are yielding to the new spirit of liberation in the 1960s, a spirit that is changing the world Troy Maxson has learned to deal with the only way he can, a spirit that is making him a stranger, angry and afraid, in a world he never knew and to a wife and son he understands less and less. Handbook of Research on Wireless Security Basic Books
From the New York Times best-selling author of Cod and Salt, a definitive history of paper and the astonishing ways it has shaped today ' s world. Paper is one of the simplest and most essential pieces of human technology. For the past two millennia, the ability to produce it in ever more efficient ways has supported the proliferation of literacy, media, religion, education, commerce, and art; it has formed the foundation of civilizations, promoting revolutions and restoring stability. By tracing paper ' s evolution from antiquity to the present, with an emphasis on the contributions made in Asia and the Middle East, Mark Kurlansky challenges common assumptions about technology ' s influence, affirming that paper is here to stay. In this unique book, Pastor Eric Redmond confronts the important question of "Where are the black men in the African-American church?" with a candid approach that combines wisdom with a conversational tone. Instead of side-stepping issues, Redmond converses with readers about some of their reasons for not going to church-the church seems geared toward women, the preacher is just an ordinary man, Islam appears to offer more for the black man, organized religion is not necessary, churches are just after your money-and approaches their skepticism with respect but also with corrective truth. On these and other topics, Where Are All the Brothers? speaks about the things that men think about in private or discuss at the barbershop when it comes to church and religion, challenging them to reexamine their long-held assumptions. Redmond, who has used this material in a variety of settings with great success, also gives eight things to look for when considering a good church so that readers can find a healthy, biblical church home. And it's all in this unintimidating book that can easily be read in ten

minutes a day.

"This report is all about people and using computers to connect them and their healthcare information. It is a report about how we get consumers and clinicians to use these tools, how we pay for them, and what we want the computers to do. But computers are only a tool, a means to an end. We have focused this report on computers because they seem to be the best tool--and maybe the only tool--that will allow the nation to change the way healthcare works... This report articulates a vision of an information-connected healthcare system, where consumers' privacy is protected and their convenience facilitated, where doctors and nurses have the information they need to efficiently deliver safe and effective care, where our public health and homeland security can be protected while still guarding each individual's privacy. The report recommends specific actions and broader policy objectives, all with the goal of allowing healthcare to effectively use computers and information technology. If followed, the Commission's recommendations will accelerate healthcare's transformation." [From Foreword].

Praised by Entertainment Weekly as “ the man who put the fizz into physics,” Dr. Len Fisher turns his attention to the science of cooperation in his lively and thought-provoking book. Fisher shows how the modern science of game theory has helped biologists to understand the evolution of cooperation in nature, and investigates how we might apply those lessons to our own society. In a series of experiments that take him from the polite confines of an English dinner party to crowded supermarkets, congested Indian roads, and the wilds of outback Australia, not to mention baseball strategies and the intricacies of quantum mechanics, Fisher sheds light on the problem of global cooperation. The outcomes are sometimes hilarious, sometimes alarming, but always revealing. A witty romp through a serious science, Rock, Paper, Scissors will both teach and delight anyone interested in what it what it takes to get people to work together.
