Books, magazine articles, and educational programs on entrepreneurship are all based on the idea that anyone can be an entrepreneur—that entrepreneurs are made, not born. Well, maybe not. In a study of 234 CEOs funded by the Kauffman Foundation, James L. Fisher and James V. Koch came up with a surprising conclusion: Some individuals are simply more naturally fitted to become entrepreneurs than others. They are pre-wired. Because of heredity, some people are much more likely to become

successful entrepreneurs or pursue entrepreneurial strategies within a corporate setting profitably. By recognizing that, this book will significantly improve corporate selection processes, strengthen entrepreneurship programs, and boost the confidence of aspiring entrepreneurs through invaluable insights. Among other things, Fisher and Koch show that true entrepreneurs not only see the world differently—they act differently. Compared with corporate managers, for example, they are more confident, more decisive, more likely to upset the apple cart, and more energetic. They love to compete but are notable for the partnerships they are able to fashion with friend and foe alike. Such conclusions are remarkable. Why? Because they are based on the only empirical comparison study yet conducted on entrepreneurship. The insights are not based on personal opinion or case studies but on valid and reliable personality indicators. Because the book shows that certain kinds of people will find it much easier to found successful companies than others, it has many practical applications. It will help organizations fit the right people into jobs requiring an entrepreneurial bent. It will challenge corporations to hire entrepreneurial CEOs who will transform businesses rather than maintain the status quo. And it will speak directly to entrepreneurs and those contemplating starting a business, who will learn if they have the right

stuff to start and sustain a business. In short, this book provides insights into the entrepreneurial soul that can change the fortunes of individuals and companies for the better.

Economics 4th edition is a concise introduction to the core principles of economics, aimed at students taking their first, and probably only, one semester course in Economics. These students may be taking a business related degree, or may be from other degree schemes in the university taking a service course in Introductory Economics. There is a balanced split between the micro and macro economics section and the use of case studies and numerous examples makes this a lively little book for the reader. The real difference that this book offers the student is the amount and variety of questioning material that will really test their understanding.

The snow-storm lasted another day; but what became of it afterwards, I cannot possibly imagine. At any rate, it entirely cleared away, during the night; and when the sun arose, the next morning, it shone brightly down on as bleak a tract of hill-country, here in Berkshire, as could be seen anywhere in the world. The frost-work had so covered the windowpanes that it was hardly possible to get a glimpse at the scenery outside. But, while waiting for breakfast, the small populace of Tanglewood had scratched peepholes with their finger-nails, and saw with vast delight that—unless it were one or two bare patches on a precipitous hillside, or the gray effect of the snow, intermingled with the black pine forest—all nature was as white as a sheet. How exceedingly pleasant! And,

to make it all the better, it was cold enough to nip one's nose short off! If people have but life enough in them to bear it, there is nothing that so raises the spirits, and makes the blood ripple and dance so nimbly, like a brook down the slope of a hill, as a bright, hard frost.

Presents algorithmic techniques for solving problems in bioinformatics, including applications that shed new light on molecular biology This book introduces algorithmic techniques in bioinformatics, emphasizing their application to solving novel problems in post-genomic molecular biology. Beginning with a thought-provoking discussion on the role of algorithms in twenty-first-century bioinformatics education,

Bioinformatics Algorithms covers: General algorithmic techniques, including dynamic programming, graph-theoretical methods, hidden Markov models, the fast Fourier transform, seeding, and approximation algorithms Algorithms and tools for genome and sequence analysis, including formal and approximate models for gene clusters, advanced algorithms for non-overlapping local alignments and genome tilings, multiplex PCR primer set selection, and sequence/network motif finding Microarray design and analysis, including algorithms for microarray physical design, missing value imputation, and meta-analysis of gene expression data Algorithmic issues arising in the analysis of genetic variation across human population, including computational inference of haplotypes from genotype data and disease association search in case/control epidemiologic studies Algorithmic approaches in structural and

systems biology, including topological and structural classification in biochemistry, and prediction of protein-protein and domain-domain interactions Each chapter begins with a self-contained introduction to a computational problem; continues with a brief review of the existing literature on the subject and an in-depth description of recent algorithmic and methodological developments; and concludes with a brief experimental study and a discussion of open research challenges. This clear and approachable presentation makes the book appropriate for researchers, practitioners, and graduate students alike.

Dusman Gonzaga lives in a squalid apartment block overrun by poverty and cockroaches. The crumbling building is owned by Tumbo Kubwa, a mindless slum lord with a heart of stone, and occupied by a strange mix of characters; from garbage collectors to hawkers, from conmen to witch doctors, from wise men to mad men. In this crazy world of wild adventures and appalling poverty, Dusman tries to organize the tenants to boycott paying rent in a desperate move to force the landlord to heed their cries. Dusman, however, finds himself alone against the landlord. Afraid that the landlord will summon the police to evict them as promised, his neighbours beg out of the confrontation, pleading special, personal circumstances. An inside look at how patients living with terminal illness created one of the country ' s first medical marijuana collectives Marijuana as medicine has been a politically charged topic in this country for more than three decades. Despite overwhelming public support and growing scientific evidence of its

therapeutic effects (relief of the nausea caused by chemotherapy for cancer and AIDS, control over seizures or spasticity caused by epilepsy or MS, and relief from chronic and acute pain, to name a few), the drug remains illegal under federal law. In Dying to Get High, noted sociologist Wendy Chapkis and Richard J. Webb investigate one community of seriously-ill patients fighting the federal government for the right to use physician-recommended marijuana. Based in Santa Cruz, California, the Wo/Men ' s Alliance for Medical Marijuana (WAMM) is a unique patient-caregiver cooperative providing marijuana free of charge to mostly terminally ill members. For a brief period in 2004, it even operated the only legal non-governmental medical marijuana garden in the country, protected by the federal courts against the DEA. Using as their stage this fascinating profile of one remarkable organization, Chapkis and Webb tackle the broader, complex history of medical marijuana in America. Through compelling interviews with patients, public officials, law enforcement officers and physicians, Chapkis and Webb ask what distinguishes a legitimate patient from an illegitimate pothead, good drugs from bad, medicinal effects from just getting high. Dying to Get High combines abstract argument and the messier terrain of how people actually live, suffer and die, and offers a moving account of what is at stake in ongoing debates over the legalization of

Epidemics and the Modern World

This textbook fills the gap between the very basic and the highly advanced volumes that are widely available on the subject. It offers a concise but comprehensive overview of a number of topics, like general relativity, fission and fusion, which are otherwise only available with much more detail in other textbooks. Providing a general introduction to the underlying concepts (relativity, fission and fusion, fundamental forces), it allows readers to develop an idea of what these two research fields really involve. The book uses real-world examples to make the subject more attractive and encourage the use of mathematical formulae. Besides short scientists' biographies, diagrams,

end-of-chapter problems and worked solutions are also included. Intended mainly for students of scientific disciplines such as physics and chemistry who want to learn about the subject and/or the related techniques, it is also useful to high school teachers wanting to refresh or update their knowledge and to interested non-experts.
