On the New Edition of "Building Classroom Discipline" "I feel the book is the best overview of Classroom Management for an entry-level teacher. It has a strong theoretical basis and provides students with a sound overview of classroom management. . . . [E]ach chapter is easy to follow and . . . [t]he case examples and the application examples strengthen each chapter. . . . I feel that Chapter 13 and 14 provide the students with a formula that helps them determine their knowledge of CM and the steps they can take to properly develop their own approach. . . . I like the format of Chapter 12, which looks at the eight fundamental questions in discipline. . . . It allows the students to become more cognizant of how they can apply CM in their future classes. . . . A true gem of a book!"

--Aubrey Fine, CA Poly University "I like the approach this new edition takes. The author presents information that is accurate and up-to-date with the research in the field. I particularly like the author's attention to detail, as he interacted with the authorities in the field (who

were featured in this textbook) to ensure their points of view were accurate. . . . The activities at the end of the chapters (tests, self tests, case studies) were great reinforcements of the content covered in the chapters, enabling the students to apply what they have learned. . . . [Two things] I like about the new edition that the [previous edition did] not have [are] the chapter on self-assessment, as well as [the] inclusion of the "Be the Teacher Scenarios" in all the chapters. My students have enjoyed the "Be the Teacher" practice exercises a lot, and I am glad that with the new edition they will have even more opportunities to practice." --Madalina Tanase, University of North Florida "Not only does Charles provide the essence of each model, but he focuses on how to execute the model in a classroom. The step-by-step approach is exceptional. . . . I believe the 11th edition is much more suited to college teaching in all aspects. The organizations of the chapters are much more ordered and the less explained/known theorists have been omitted. . . . Chapter 14 is a welcomed, refined addition! We have our students design their Classroom Management Plan and this certainly will provide them with an outline aligned with the content from the text."

On MyEducationLab for Classroom Management "I have used MyEducationLab for Classroom Management in the past. I find that this material is useful in expanding the learning experience outside of the classroom and provides some great ideas for further explanation, exploration, and application of concepts learned in the class. I have also used Simulations in Classroom Management as part of my course. I do find them to be reasonable starting places to understand how to apply a theory to a classroom situation." --Robert Harrington, University of Kansas

Looking in Classrooms uses educational, psychological, and social science theories and classroom-based research to teach future classroom teachers about the complexities and demands of classroom instruction. While maintaining the core approach of the first ten editions, the book has been thoroughly revised and updated with new research-based content on teacher evaluation, self-assessment, and decision-making; special emphases on teaching students from diverse ethnic, cultural, class, and gender-identity contexts; and rich suggestions for integrating technology into classroom instruction. Widely considered to be the most comprehensive and authoritative source available on effective, successful teaching, Looking in Classrooms synthesizes the knowledge base on student motivation, classroom management,

teacher expectations, teacher effectiveness, adaptive instruction for individual learners, and informative observational techniques for enhancing teaching. It addresses key topics in classroom instruction in an accessible fashion, promoting easy interpretation and transfer to practice, and articulates the roles of teacher-centered pedagogy, student-centered instruction, and project-based learning in today's classroom. Guided by durable historical knowledge as well as dynamic, emerging conceptions of teaching, this text is ideal for undergraduate teacher training programs and for masters-level courses for teachers, administrators, and superintendents.

It then examines multiple case studies of students from the study's control cohort who did not have classroom management coursework in their methods course. Can community-building begin in a classroom? The authors of this book believe that by applying restorative justice at school, we can build a healthier and more just society. With practical applications and models. Can an overworked teacher possibly turn an unruly incident with students into an "opportunity for learning, growth, and community-building"? If restorative justice has been able to salvage lives within the world of criminal behavior, why shouldn't its principles be applied in school classrooms and cafeterias? And if our children learn restorative practices early and daily, won't we be building a healthier, more just society? Two educators answer yes, yes, and yes in this new addition to The Little Books of Justice and Peacebuilding series. Amstutz and Mullet offer applications and models. "Discipline that restores is a process to make things as right as possible." This Little Book shows how to get there.

Elementary Classroom Management

Addison-Wesley Longman

First released in the Spring of 1999, *How People Learn* has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do-with curricula,

classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. *How People Learn* examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.
