The Building Regulations Createspace Independent Publishing Platform

Since publication of the first edition in 1976, *The Building Regulations: Explained and Illustrated* has provided a detailed, authoritative, highly illustrated and accessible guide to the regulations that must be adhered to when constructing, altering or

extending a building in England and Wales. This latest edition has been fully revised throughout. Much of the content has been completely rewritten to cover the substantial changes to the Regulations since publication of the 13th edition, to ensure it continues to provide the detailed guidance needed by all those concerned with building work, including architects, building control officers, Approved Inspectors, Competent Persons, building surveyors, engineers, contractors and students in the relevant disciplines.

offers a novel
approach to design,
construction, and
facility
management in
which a digital
representation of
the building product
and process is
used to facilitate
the exchange and
interoperability of
information in
digital format. BIM
is beginning to
change the way
buildings look, the
way they function,
and the ways in
which they are
designed and built.
The BIM

An aggregate approach for improvements of new non-domestic buildings will deliver an improvement of 25% overall, rather than for each individual building. This is due to the fact that there is a greater variety amongst non- domestic buildings and some will be much easier than others to make efficient. The changes to Part L will increase the

minimum levels of energy efficiency for building fabric and services, so that CO2 targets cannot be achieved through renewables alone. This reflects the principles of reducing overall demand for energy. The measures will also be relevant when people elect to carry out work to existing buildings including extensions and conversions, fabric renovations, replacement windows and boilers. This Approved Document L2A (2010) comes into force October 2010 in support of the Building Regulations 2000. The Approved Documents provide technical guidance on ways of

complying with the Building Regulations; They are continuously revised in line with new legislations. Governments
across the globe
are setting targets
for reducing their
carbon emissions.
For example, the
UK Government
has committed to
an eighty per cent
reduction by
2050, when
twenty-eight
million buildings

that currently exist
will still be
standing; this
represents a
challenge to
improve the
energy efficiency
of more than one
building per
minute between
now and 2050!
This is a problem
that needs tackling
worldwide and is a
challenge to both
the refurbishment
sector of the
global construction
industry and to
those who own
and operate
existing buildings.
Sustainable
Retrofit and
Facilities
Management
provides
comprehensive
guidance to those
involved in the

refurbishment and
management of
existing buildings
on minimizing
carbon emissions,
water
consumption and
waste to landfill,
along with
enhancing the
long term
sustainability of a
building. Practical
guidance is
provided on
measures that can
be used to
improve the
efficiency and
sustainability of
existing buildings,
through both good
management and
refurbishment.
Also explored is
the relationship
between the
refurbishment of
existing buildings,
facility

management and the wider community infrastructure. The book looks at management tools such as post occupancy evaluation, building health checks, energy management software, green building management toolkits and green leases. Illustrated throughout with case studies and examples of best practice, this is a must-have handbook for engineers, architects, developers, contractors and facility managers.
