In the years since 9/11 Special Forces of many nations have been in almost constant action in covert, high risk operations around the globe. These include the two long conflicts in Iraq and Afghanistan, fighting

nationalist insurgents and jihadist terrorists, as well as other lesser known operations. The weapons used by SF are a constant source of interest and speculation, as are SF training, methods and vehicles. The armories of these elite units have developed rapidly to meet their demands and the ever more sophisticated threat.

They include for example suppressed piston-driven carbines, programmable grenade launchers that airburst behind hidden enemy and sniper rifles of extreme accuracy and range. This highly researched book gives the reader a privileged insight into this secret world exploring the custom-built weapons that operators carry on capture/kill missions in

the 21st Century.

As Hitler's dreams of a Thousand Year Reich crumbled in the face of overwhelming assaults from both East and West in the first months of 1945 the heavily out numbered German armed forces were still capable of fighting with a tenacity and professionalism at odds with the desperate circumstances. While Hitler fantasized about deploying divisions and armies that had long since ceased to exist, boys of fifteen, officer cadets, sailors and veterans of the Great War joined the survivors of shattered formations on the front line. Leading historian

Tony Le Tissier gives a German perspective to the mayhem and bloodshed of the last months of the Second World War in Europe. Teenaged Flak auxiliaries recount their experiences alongside veteran Panzergrenadiers attempting to break out of Soviet encirclement. Struggles between the military, industry and the Nazi Party for influence over the defenders of Berlin contrast with a key participant's account of Goebbel's abortive attempt to conclude a cease-fire with the Soviets. This is fascinating reading for anybody interested in the ordinary soldier's experience of the

culminating battles in central Europe in 1945.

This manual has been written with the Law Enforcement Firearms Instructor in mind. It is an attempt to save the instructor time by furnishing already prepared outlines that cover most of the subject currently taught by and to law enforcement personnel. The purpose of the manual is twofold: First, it can be used by current firearms instructors as a handy

reference guide and also as a way of keeping all of the firearms outlines in one simple format. By preparing the manual in this fashion, all of an instructor's outlines are easily accessible should an instructor's class be challenged by the legal system. Secondly, this manual can be used as the text for firearms instructor initial certification classes. Once the new instructor completes the basic certification course, he or she will have a complete set of outlines that can be used for teaching their classes. The first four outlines in this manual (The Role of the Firearms Instructor, Safety Responsibilities,

Record Keeping, and Discipline) are generally used during instructor development classes. The rest of the outlines, while also used in instructor development classes, are also appropriate for basic recruit classes as well as classes that are designed for in-service personnel. The Appendix contains material that can be used as class handouts or made into overheads for class presentations. Some of the courses can be used for general firearms qualification, while others are used for training a specific skill, such as linear and lateral movement or multiple attackers. The manual has been written to take the pain

out of the "office work" part of being a firearms instructor and to give the instructor more time to teach.

The major combat operations of Operation Iraqi Freedom (OIF) have been judged from virtually all quarters as a remarkable success, although accompanied by some perceptions that this success was achieved in the face of severe logistics problems. This monograph describes how Army forces were sustained during Operation Iraqi Freedom, examines how well this support performed, and discusses the effects on operations with an emphasis on the period from the start of ground

combat to the fall of Baghdad. The findings should be of interest throughout the Army as well as the broader Department of Defense supply chain, deployment planning, and force development communities. The findings have implications for the design of the logistics system, logistics process improvement efforts, future force design and warfighting concepts, and the acquisition of end items such as vehicles as well as logistics enablers such as those that provide logistics situational awareness.
