The Military Balance 2021 OUTSKIRTS PRESS

The major combat operations of Operation Iraqi Freedom (OIF) have been judged from virtually all quarters as a remarkable success, although accompanied by some perceptions that this success was achieved in the face of severe logistics problems. This monograph describes how Army forces were sustained during Operation Iraqi Freedom, examines how well this support performed, and discusses the effects on operations with an emphasis on the period from the start of ground combat to the fall of Baghdad. The findings should be of interest throughout the Army as well as the broader Department of Defense supply chain, deployment planning, and force development communities. The findings have implications for the design of the logistics system, logistics process improvement efforts, future force design and warfighting concepts, and the acquisition of end items such as vehicles as well as logistics enablers such as those that provide logistics situational awareness.

Sustainment of Army Forces in Operation Iraqi Freedom Echo Point Books & Media

As Hitler's dreams of a Thousand Year Reich crumbled in the face of overwhelming assaults from both East and West in the first months of 1945, the heavily outnumbered German armed forces were still capable of fighting with a tenacity and professionalism at odds with the desperate circumstances.

While Hitler fantasized about deploying divisions and armies that had long since ceased to exist, boys of fifteen, officer cadets, sailors and veterans of the Great War joined the survivors of shattered formations on the front line. Leading historian Tony Le Tissier gives a German perspective to the mayhem and bloodshed of the last months of the Second World War in Europe. Teenaged Flak auxiliaries recount their experiences alongside veteran Panzergrenadiers attempting to break out of Soviet encirclement. Struggles between the military, industry and the Nazi Party for influence over the defenders of Berlin contrast with a key participant's account of Goebbels' abortive attempt to conclude a cease-fire with the Soviets. This is fascinating reading for anybody interested in the ordinary soldier's experience of the culminating battles in central Europe in 1945.

High Value Fermentation Products, Volume 1 Routledge

Green technologies are no longer the “ future ” of science, but the present. With more and more mature industries, such as the process industries, making large strides seemingly every single day, and more consumers demanding products created from green technologies, it is essential for any business in any industry to be familiar with the latest processes and technologies. It is all part of a global effort to “ go greener, ” and this is nowhere more apparent than in fermentation technology. This book describes relevant aspects of industrial-scale fermentation, an expanding area of activity, which already generates commercial values of over one third of a trillion US dollars annually, and which will most likely radically change the way we produce chemicals in the long-term future. From biofuels and bulk amino acids to monoclonal antibodies and stem cells, they all rely on mass suspension cultivation of cells in stirred bioreactors, which is the most widely used and versatile way to produce. Today, a wide array of cells can be cultivated in this way, and for most of them

genetic engineering tools are also available. Examples of products, operating procedures, engineering and design aspects, economic drivers and cost, and regulatory issues are addressed. In addition, there will be a discussion of how we got to where we are today, and of the real world in industrial fermentation. This chapter is exclusively dedicated to large-scale production used in industrial settings.

The Road to Safwan John Wiley & Sons

The armored car has played a major role in American military operations since the relatively early days of the 20th Century. In 1989 Col. Royal P. Davidson arranged for the installation of a .30 caliber Colt machine gun on a Duryea light three-wheeled car. In doing so, he jump-started the development and production of armored fighting vehicles that have served in the American military ever since. Although the very first armored cars were merely outfitted with a gunshield, they were soon fully protected by armor plating. In this installment of R. P. Hunnicutt's 10-volume series on the history of American armored vehicles he details their early development through WWI, WWII, Korea, and Vietnam. Beginning with the development of armored cars on American soil at the outbreak of WWI-although none were ever

shipped overseas-Hunnicuttt goes on to describe the production of armored cars based on commercial car and truck chassis in the 1920s. These vehicles eventually reached limited production as the armored car M4. With detailed drawings and photographs to illustrate the history, Hunnicutt describes the development of the armored car T3, which was also designated as scout car T1. The development of these lightweight scout cars, which met the needs of the cavalry, made the armored car unnecessary by 1937. Although production of armored cars stopped for the American military, American development continued on armored cars intended for British use. However, in 1942 as the Palmer Board decided to limit the weight of reconnaissance vehicles, the light armored car T22E2 was standardized as the M8 and put into production. The M8 and a variation, the M20, served in the U.S. Army until after the Korean War, with new models developed for use in Vietnam. Spanning the history of American wheeled combat vehicles, Hunnicutt's "Armored Car" is a must have for anyone with a keen interest in the history of American military operations and equipment.

Operator and Organizational Maintenance Manual Bloomsbury Publishing The U.S. Army teamed up with cartoonist and graphic artist Will Eisner to produce teaching tools for U.S. soldiers in a medium that they could easily understand. The M16A1 Rifle: Operation and Preventive Maintenance, first printed in 1969, features a female narrator who instructs GIs on the proper care of their AR-15 (military name M16A1) rifles—firearms notorious for jamming and malfunctioning. More than a simple manual and step-by-step guide, this unconventional yet important military document tried to appeal to soldiers with suggestive chapter titles such as “ How to Strip Your Baby, ” “ What to Do in a Jam, ” “ Sweet 16, ” and “ All the Way with N é g l i g é . ” A copy of the thirty-two-page booklet was issued to nearly every soldier serving in Vietnam.

The Road to Safwan is a complete history of the 1st Infantry Divisions cavalry unit fighting in Operation Desert Storm.

Stephen A. Bourque and John W. Burdan III served in the 1st Infantry Bourque in Division Headquarters, Burdan as the Operations Officer of the 1st Squadron, 4th Cavalry. Based on extensive interviews and primary sources, Bourque and Burdan provide the most in-depth coverage to date of a battalion-level unit in the 1991 war, showing how the unit deployed, went into combat, and adapted to changing circumstances. The authors describe how the officers and men moved from the routine of cold war training to leading the Big Red One in battle through the Iraqi defenses and against the Iraqi Republican Guard. The 1st Squadron, 4th Cavalry participated in the 1st Brigade attack on G-Day, the large tank battle for Objective Norfolk, the cutting of Basra Road, and the capture of Safwan Airfield, the site where General H. Norman Schwarzkopf conducted cease-fire negotiations with the Iraqis. The squadrons activities are placed squarely within the context of both division and corps activities, which illustrates the fog of war, the chain of command, and the uncertainty of information affecting command decisions. The Road to Safwan challenges the myth that technology won the 1991 Persian Gulf War. Contrary to popular view, it was a soldier's war not much different from previous conflicts in its general nature. What was different was the quality and intensity of the unit's training, which resulted, repeatedly, in successful engagements and objectives secured. It is the story of the people,

not the machines, which ultimately led this squadron to the small town of Safwan.
