In International Standardisation of Good Corporate Governance - Best Practices for the Board of Directors the Academy of Directors (AoD) presents a multidisciplinary approach for the

governance of a company. The AoD also aims to use the interaction between the academic and the business world to change the environment in which companies work. This task is realised in different ways: by conducting applied scientific research, creating a large pool of professional experience and networking within the AoD, confronting these research results with the practical experience of the members, publishing these results, and organising training programmes. The AoD therefore collaborates very closely with the academic world. The Vlerick School of Management was the co-founder of the AoD, together with a great number of national and international business partners. The foundation of the AoD goes back to the initiative of its president, Mr. L.H. Verbeke (Loeff Claeys Verbeke). He was convinced that the increasing international interest in corporate governance would also affect Belgian companies, but that there was a need for an 'indigenous coherent' view of corporate governance. Being at the cross-roads of different cultures and languages and at the same time being a very open economy, Belgium could not simply copy another country's code on good corporate governance. Therefore the initiative was taken to set up a broad international overview of the best practices for the board of directors, which is presented in this volume. This analysis is not only oriented towards the 'famous' codes but aims to highlight as well the practical applications and problems faced in implementing these suggestions. Consequently special attention is given to the best practices for family businesses

and medium-sized companies.

Innovations J. Ross Publishing TRIM is the acronym for: The Rational IT Model™. This is a vendor neutral reference model that can be used to adopt IT Service Management as a practice. The model originates from the experience of more than fifteen years of IT Service Management implementations, and describes the foundations and mechanisms of IT Service Management in such a way that it fits all sizes of organizations. TRIM is a complete model for IT service delivery based on the ITIL® framework that has been simplified and scaled down to a

level that all organizations can handle. The model includes all the processes, roles, templates and procedures that you need to implement IT Service Management as a working and efficient production of IT services that provide value to your organization. In addition to all the documents, the concept of the model is based on a holistic view with functions, escalation paths and governance of the organization, making it easy to get your entire organization, including suppliers, to work together. The model is easy to understand and to implement. It can be used as the basis for an ISO/IEC 20000 certification. This means that organizations that have decided to adopt ITIL as a source of best practice still can get benefit from using TRIM as a reference model, without changing the aim for ITIL or ISO/IEC20000. The difference is that ITIL is a framework of best practices, while TRIM is a reference model designed to be a guidance in connecting roles and organizational parts to functions and processes so that it becomes clearer how everything is connected in the delivery of IT services. Since the model is complete, managers and consultants can use this

book to get a basic understanding for the mechanisms in delivering IT services and as criteria for gap analyses. TRIM is community driven by its members, whose experience will contribute to the future development of the model. The members also consist of tool vendors, course providers and consultants who have developed a wide range of TRIM specific tool configurations, cloud services, courses and workshops to make it easier for organizations to adopt the model.

The Corporate University Handbook Plunkett Research, Ltd.

Sustainability: What It Is and How to Measure It begins with a succinct business-focused summary of how to think about the risks and opportunities associated with sustainability. The author then includes his proprietary framework, The Corporate Sustainability Scorecard™ C-suite rating system, including the over 140 key sustainability indicators that are used to rate an organization's sustainability efforts. Each KSI includes examples from organizations around the world, giving the reader a complete and unbiased

understanding of all aspects of sustainability. The Scorecard has been developed over the past 20 years and used by more than 70 corporations to rate themselves on sustainability. Gilbert S. Hedstrom illustrates the use of the Scorecard with hundreds of examples. He discusses sustainability transformation, governance, and strategy and execution. Social responsibility and environmental stewardship form important parts of his discourse in this important contribution to the debate on sustainability that will benefit business executives and those interested in sustainability and business. Despite the exponential growth of computing and communications technology, the inertia of old business

technology management practices still drives most investment decisions in this area. Companies spend too much money on new technology, while their business models and processes underutilize the resources they already have. Written in a compelling, conversational manner, *Best Practices in Business Technology Management* advises those who buy, install, and support all types of computing and communications technology, empowering them to optimize their systems in new and innovative ways. Divided into six chapters, the book provides insight into the field, discussing decision-making, trends, alignment, optimization, processes, timing, and other areas. It includes practical hands-on advice that explores organization, the challenges of working with people, acquisition and measurement of technology, operational effectiveness, and strategic effectiveness. The best practices presented are not theoretical or untested. Rather, they are the result of trench warfare and real

applications. The insights contained in this volume represent what successful companies have done—and continue to do—to optimize the performance of business technology relationship. A nationally-known business technology veteran, author Stephen J. Andriole has developed a perspective on the optimization of computing and communications technology based on years of experience from government, industry, academia, and the venture capital business. In this book, he demonstrates how those who buy and deploy technology can optimize their technology in a way that saves costs and provides maximum performance.

The author shows that advisory boards in technology-based startups have seven different roles and functions: control, advice, networking, signalling, capital provision, co-management, coordination. It is shown that venture capital investors try to influence the importance of these roles in favour of control, coordination and co-management. Contrary to this, the satisfaction of founders as well as advisory

board members increases with a higher importance of advice, networking and signalling. This analysis provides both qualitative and quantitative empirical data on the usage of those boards in practice.
