It then explains what business analysis really means, outlines the principal features of analyst workbenches, and considers the ways in which they can solve the problems. The	following chapters focus on how the analyst can deal with performance issues and lay proper foundations for the later, more detailed, work of the designer; the use of artificial intelligence techniques in workbenches; and strategic information systems planning technology. Integrated Project Support Environments (IPSEs) and the workbench-related phenomenon of mapping are also discussed. The final chapter evaluates future prospects for	workbench products. This volume constitutes the proceedings of the 4th IFIP WG 8.1 Working Conference on the Practice of Enterprise Modeling, held in Oslo, Norway, during November 2-3, 2011. The conference series is a dedicated forum where the use of enterprise modeling (EM) in practice is

addressed by bringing together researchers, users, and practitioners in order to develop a better understanding of the practice of EM, to contribute to improved industrial EM applications, and to share knowledge and experiences. The 18 papers presented were carefully reviewed and selected from 38 submissions. Authored by both researchers and practitioners, they reflect the fact that EM encompasses human, organizational issues as well as technical aspects related to the development of information

systems. The papers are organized in five thematic sessions on process modeling, business modeling, enterprise architecture, EM, and model-driven development. In addition, two keynotes on EM in an agile world and on intra- and inter-organizational process mining complete the volume.
