Probably Someday Cancer John Wiley & Sons

Jewels of India: Leading Indo-American Personalities (Vol II) is our 50th publication themed on the inspiring real-life stories of struggles, sacrifices and successes of 75 Indo-Americans.

Jewels of India McGraw Hill
After learning that she inherited a BRCA2 genetic mutation that put her at high risk for breast and ovarian cancer, Kim Horner's doctors urged her to consider having a double mastectomy. But how do you decide whether to have a surgery to remove your breasts to reduce your risk for a disease you don't have and may never get? Horner shares her struggle to answer that question in Probably Someday Cancer. The mother of a one-year-old boy, she wanted to do whatever would give her the best odds of being around for her son and protect her from breast cancer, which killed her grandmother and great-grandmother in their 40s. Which would give her the best chance at a long healthy life: a double mastectomy or frequent screenings to try to catch any cancer early? The answers weren't that simple. Based on extensive research, interviews, and personal experience, Horner writes about how and why she ultimately opted for a double mastectomy—the same decision actress Angelina Jolie made for a similar genetic mutation—and the surprising diagnosis that followed. The book explores difficult truths that get overshadowed by upbeat messages about early detection and survivorship—the fact that screenings can miss cancers and that even early-stage breast cancers can spread and become fatal. Probably Someday Cancer is about the author's efforts to push past her fear and anxiety. This

book can help anyone facing hereditary risk of breast and ovarian cancer feel less alone and make informed decisions to protect their health and end the devastation that hereditary cancer has caused for generations in so many families.
