Knowledge updating is a
never-ending process and
so should be the revision
of an effective textbook.
The book originally written
fifty years ago has, during
the intervening period,
been revised and
reprinted several times.

The authors have,
however, been thinking,
for the last few years that
the book needed not only
a thorough revision but
rather a substantial
rewriting. They now take
great pleasure in
presenting to the readers
the twelfth, thoroughly
revised and enlarged,
Golden Jubilee edition of
the book. The subject-
matter in the entire book
has been re-written in the
light of numerous
criticisms and suggestions
received from the users of
the earlier editions in India
and abroad. The basis of
this revision has been the
emergence of new
literature on the subject,
the constructive feedback
from students and
teaching fraternity, as well
as those changes that
have been made in the
syllabi and/or the pattern
of examination papers of
numerous universities.

This graduate textbook covers topics in

statistical theory essential for graduate students preparing for work on a Ph.D. degree in statistics. This new edition has been revised and updated and in this fourth printing, errors have been ironed out. The first chapter provides a quick overview of concepts and results in measure-theoretic probability theory that are useful in statistics. The second chapter introduces some fundamental concepts in statistical decision theory and inference.

Subsequent chapters contain detailed studies on some important topics: unbiased estimation, parametric estimation, nonparametric estimation, hypothesis testing, and confidence sets. A large number of exercises

in each chapter provide not only practice problems for students, but also many additional results.
