Microsoft Forefront Security Administration Guide John Wiley & Sons The IAM Portal is a centralized One Stop Shop with self-service capabilities for access and service management requests. It autonomously helps the nominated User Administrators to manage access rights through

business roles for all users under their responsibility (Figure 1: Transforming the Service). By using the capabilities of IAM Portal, MSCA User Administrators and NEA Administrators can manage all different types of requests (create/suspend accounts, join/leave business roles, service requests, etc.) without requiring help from ECHA. IAM Portal is based on RBAC model (role based access control); hence it reduces the complexity in requesting detailed and fine-grained application permissions. It improves the response and resolution time for all access requests. The users are able to request access based on their role in the national authorities, rather than on-off user access rights requests. Moreover, the User Administators can grant access to multiple systems simultaneously based on predefined business roles tailored to the job responsibilities of their organisation.
