A guide to combining two powerful management techniques to transform any business organization into a masterpiece of business efficiency. Lester Dean Thurow, Dean of MIT's Sloan School of Management, recently stated that benchmarking combined with process engineering will be the most important management technique of the 1990s. Now, in this groundbreaking book, Gregory Watson describes how top corporations worldwide have already successfully implemented that powerful cutting-edge technique--which he calls "business systems engineering"--to promote continuous improvement. More importantly, he clearly demonstrates how you can do the same in your organization. * Introduces business systems engineering, a dynamic new approach to rethinking and redesigning business processes to

achieved dramatic improvements in quality, cost, service, speed, and more * Offers clear guidelines for using business systems engineering techniques to make your organization more dynamic, productive, and able to adapt to change in today's global marketplace * Incorporates key aspects of TQM, business process improvement, policy deployment, industrial engineering, teamwork, problem solving, and information technology into one holistic system * Includes business systems engineering success stories, including those at Compaq, United Services Automobile Association and Motorola, as well as a survey of the effect of systems change across the global automobile industry

Fundamentals of Business Process Management

DIANE Publishing

Businesses must constantly adapt to a dynamically changing environment that requires choosing an adaptive and dynamic information architecture that has the flexibility to support both changes in the business environment and changes in technology. In general, information systems reengineering has the objective of extracting the contents, data structures, and flow of data and process contained within existing legacy systems in order to reconstitute them into a new form for

subsequent implementation. Information Systems Reengineering for Modern Business Systems: ERP, Supply Chain and E-Commerce Management Solutions covers different techniques that could be used in industry in order to reengineer business processes and legacy systems into more flexible systems capable of supporting modern trends such as Enterprise Resource Planning (ERP), supply chain management systems and e-commerce. This reference book also covers other issues related to the reengineering of legacy systems, which include risk management and obsolescence management of requirements. The business environment of the 1990s demands significant changes in the way we do business. Simply formulating strategy is no longer sufficient; we must also design the processes to implement it effectively.

The key to change is process innovation, a revolutionary new approach that fuses information technology and human resource

management to improve business performance. The cornerstone to process innovation's dramatic results is information technology--a largely untapped resource, but a crucial "enabler" of process innovation. In turn, only a challenge like process innovation affords maximum use of information technology's potential. Davenport provides numerous examples of firms that have succeeded or failed in combining business change and technology initiatives. He also highlights the roles of new organizational structures and human resource programs in developing process innovation. Process innovation is quickly becoming the byword for industries ready to pull their companies

out of modest growth patterns and compete effectively in the world marketplace.

Abstract: "This book focuses on business process standards and standardization, offering an indepth multi-methodological analysis of the benefits organizations may

obtain from BPS and how the benefits can best be achieved" --Provided by publisher Business Process Change Management Zondervan

In 1996, the Ethiopian government introduced the Civil Service Reform Program (CSRP) to disentangle the intricacies of the old bureaucratic system, and to build a fair, responsible, efficient, ethical and transparent civil service that accelerates and sustains the economic development of the country. However, lack of competent personnel, prevalence of attitudinal problems and absence of a strong institutional framework constrained the success of the reform. To reinvigorate the CSRP, the Ethiopian government has been

implementing BPR in public organizations since 2004. In this regard, there are claims and counter-claims on the effectiveness of BPR implementation in improving the performance of public organizations. Motivated by such claims, this research has assessed the design, challenges, implementation and outcome of BPR in four public organizations using questionnaires, interviews, observations and review of secondary sources.
