Business Process Management

Business Process Management (BPM) has been in existence for

---

decades. It uses, complements, integrates and extends theories, methods and tools from other scientific disciplines like: strategic management, information technology, managerial accounting, operations management etc. During this period the main focus themes of researchers and professionals in BPM were: business process modeling, business process analysis, activity based costing, business process simulation, performance measurement, workflow management, the link between information technology and BPM for process automation etc. More recently the focus moved to subjects like Knowledge Management, Enterprise Resource Planning (ERP) Systems, Service Oriented Architectures (SOAs), Process Intelligence (PI) and even Social Networks. In this collection of papers we present a review of the work and the outcomes achieved in the classic BPM fields as well as a deeper insight on

recent advances in BPM. We present a review of business process modeling and analysis and we elaborate on issues like business process quality and process performance measurement as well as their link to all other organizational aspects like human resources management, strategy, information technology (being SOA, PI or ERP), other managerial systems, job descriptions etc. We also present recent advances to BPR tools with special focus on information technology, workflow, business process modeling and human resources management tools. Other chapters elaborate on the aspect of business process and organizational costing and their relationship to business process analysis, organizational change and reorganization. In the final chapters we present some new approaches that use fuzzy cognitive maps and a recently developed software tool for scenario creation and simulation in strategic management, business

process management, performance measurement and social networking. The audience of this book is quite wide. The first chapters can be read by professionals, academics and students who want to get some basic insight into the BPM field whereas the remaining present more elaborate and state of the art concepts methodologies and tools for an audience of a more advanced level.

The business environment of the 1990s demands significant changes in the way we do business. Simply formulating strategy is no longer

sufficient; we must also design the processes to implement it effectively. The key to change is process innovation, a revolutionary new approach that fuses information technology and human resource management to improve business performance. The cornerstone to process innovation's dramatic results is information technology--a largely untapped resource, but a crucial "enabler" of process innovation. In turn, only a challenge like process innovation affords maximum use of information technology's potential.

Davenport provides numerous examples of firms that have succeeded or failed in combining business change and technology initiatives. He also highlights the roles of new organizational structures and human resource programs in developing process

Diploma Thesis from the year 2010 in the subject Business economics - Business Management, Corporate Governance, grade: 2.0, University of Applied Sciences Essen, language: English, abstract: On the one hand, it is often said that the manufacturing and service companies in the industrialised countries are well organised, the business processes are well managed, so the companies are able to work effectively and efficiently. On the other hand, a lot of companies, even big corporations, have gone bankrupt over the last years, because of their confusing and inefficient business process organisation, which also led the management to take wrong decisions. So how do these two statements match? Hence it has become more important for companies, especially for those which are globally organised, to focus on their business processes to either optimise or eliminate the one which adds no value. In this context it is an important approach to find out, in what way the most important methods of BPM, BPR, and Six Sigma can help

organisations to face the challenges of today's turbulent marketplaces.

The co-author of the monumental bestseller Reengineering the Corporation continues the reengineering revolution with another national bestseller that has already sold more than 165,000 copies in hardcover Reengineering Management is a brilliant, practical and much needed book on the most powerful management idea of the decade. Reengineering—changing the traditional and outdated organization, processes and culture of a company—is corporate America's greatest challenge today. In Reengineering Management, Champy examines the far-reaching changes managers must make for themselves and their companies to succeed in an era of unprecedented competition. Through his extensive consulting and research work, he shows how reengineering succeeds only when managers reinvent their own jobs and managerial styles. Otherwise, the ultra-efficient and effective

reengineered processes for acquiring and serving customers, filling orders, bringing new concepts to market and other key business activities eventually fall apart. Champy illustrates this new management agenda through first-hand experiences of managers of reengineered operations at Federal Express, Wisconsin Electric, CIGNA Health Care, Hewlett-Packard, AT&T Universal Card Services and other companies. Champy shows how they are mastering the managerial challenges of reengineering, and as a result are making their organizations exciting and competitive. As more and more organizations reengineer, the experiences of these managers will become an insiders' guide to managerial life in the company of the future. Reengineering Management picks up where Reengineering the Corporation left off—by exploring the managerial implications of the reengineered workplace. As reengineering becomes critical to all organizations, Reengineering Management will be the road map for managerial success in the

future. It is, indeed, the manifesto for the next managerial revolution.
