Bridge the gap between theory and reality by implementing real-world examples using the Sparx EA tool and ArchiMate® 3.1 specification to develop sophisticated enterprise architecture models serving every unit in your organization  
**Key Features • Discover the**

various artifacts that enterprise architects need to develop for stakeholders to make sound decisions • Build a functional enterprise architecture repository that is rich in information, references, and metamodels • Learn how to use Sparx Enterprise Architect from scratch Book Description Most organizations face challenges in defining and achieving evolved enterprise architecture practices, which

can be a very lengthy process even if implemented correctly. Developers, for example, can build better solutions only if they receive the necessary design information from architects, and decision-makers can make appropriate changes within the organization only if they know the implications of doing so. The book starts by addressing the problems faced by enterprise architecture practitioners and

provides solutions based on an agile approach to enterprise architecture, using ArchiMate® 3.1 as an industry standard and Sparx EA as the modeling tool. You'll learn with the help of a fictional organization that has three business units, each expecting something different from you as the enterprise architect. You'll build the practice, satisfy the different requirements of

---

each business unit, and share the knowledge with others so they can follow your steps. Toward the end, you'll learn how to put the diagrams and the content that you have developed into documents, presentations, and web pages that can be published and shared with any stakeholder. By the end of this book, you'll be able to build a functional enterprise architecture practice that supports every part of your

organization. You'll also have developed the necessary skills to populate your enterprise architecture repository with references and artifacts. What you will learn • Discover how enterprise architects can contribute to projects and departments within organizations • Use Sparx Enterprise Architect to build a rich architecture repository • Learn about the ArchiMate® 3.1 specification as

you apply it in real-world projects • Use the focused metamodel technique to build the information necessary for maintaining your repository's consistency and accuracy • Understand the importance of keeping architectural artifacts simple yet eye-catching • Define an operational model that fits your initial needs and expands as required Who this book is for This book is for enterprise

architects at all architectural layers and practices of any maturity level. Many of the artifacts suggested in this book are inspired by The Open Group Architecture Framework (TOGAF®); however, familiarity with TOGAF® is not required. Whether you work within the business, applications, data, or technology layers, this book covers examples that apply to your work. Although

not mandatory, experience modeling in Sparx Systems Enterprise Architect using any modeling language will be helpful. No prior knowledge of ArchiMate® is required to get started with this book. *Staying Ahead of the Competition* Packt Publishing Ltd This book is essential reading for any manager who has to make competitive decisions ? decisions which affect the competitive success of a corporation or business unit. The book is unique in

that it is based on detailed research spanning a decade of dramatic competitive change. Thanks to the internet, globalization, technological and demographic change, the velocity of competition is increasing and competitive decisions have to be made faster. The book, however, shows that many senior managers are unprepared and unable to meet quite common competitive challenges even half the time. Moreover, many firms have developed cultures where people do not trust each other with information critical

to competitive success. Employees can spend more time competing with one another for the bonus pool than dealing with the real competitive forces. This book will equip managers with the intelligence and knowledge they need to make good competitive decisions at all levels of the organization.

or loss of diversity within our economies. On the contrary, KIBS are active agents of divergence and there is no universal pattern of the nature and the evolution of KIBS, but national varieties. It also shows that in order to well understand the inter-organizational collaboration between

KIBS and their clients and more generally KIBS dynamics and their performance, transaction cost economies and agent theory should be complemented by other perspectives such as knowledge-based approaches, network theories, modularity theories, etc. This book, which is strongly
