Content and Language Integrated Learning (CLIL) is a

form of education that combines language and content learning objectives, a shared concern with other models of bilingual education. While CLIL research has often addressed learning outcomes, this volume focuses on how integration can be conceptualised and investigated. Using different theoretical and methodological approaches, ranging from socioconstructivist learning theories to systemic functional linguistics, the book explores three intersecting perspectives on integration concerning curriculum and pedagogic planning, participant perceptions and classroom practices. The ensuing multidimensionality highlights that in the inherent connectedness of content and language, various institutional, pedagogical and personal aspects of integration also need to be considered.

Special Report: Education in Bahrain IGI Global

Economics is the nexus and engine that runs society, affecting societal well-being, raising standards of living when economies prosper or lowering citizens through class structures when economies perform poorly. Our society only has to witness the booms and busts of the past decade to see how economics profoundly affects the cores of societies around the world. From a household budget to international trade, economics ranges from the micro- to the macro-level. It relates to a breadth of social science disciplines that help describe the content of the proposed encyclopedia, which will explicitly approach economics through varied disciplinary lenses. Although there are encyclopedias of covering economics (especially classic economic theory and history), the *SAGE Encyclopedia of Economics and Society* emphasizes the contemporary world, contemporary issues, and society. Features: 4 volumes with approximately 800 signed articles ranging from 1,000 to 5,000 words each are presented in a choice of print or electronic editions Organized A-to-Z with a thematic Reader's Guide in the front matter groups related entries Articles conclude with References & Future Readings to guide students to the next step on their research journeys Cross-references between and among articles combine with a thorough Index and the Reader's Guide to enhance search-and-browse in the electronic version Pedagogical elements include a Chronology of Economics and Society, Resource Guide, and Glossary This academic, multi-author reference work will serve as a general, non-technical resource for students and researchers within social science programs who seek to better understand economics through a contemporary lens.

In *Evidence, Politics, and Education Policy*, political scientists Lorraine M. McDonnell and M. Stephen Weatherford provide an original analysis of evidence use in education policymaking to help scholars and advocates shape policy more effectively. The book shows how multiple types of evidence are combined as elected officials and their staffs work with researchers, advocates, policy entrepreneurs, and intermediary organizations to develop, create, and implement education policies. *Evidence, Politics, and Education Policy* offers an in-depth understanding of the political environment in which evidence is solicited and used. Two key case studies inform the book's findings. The primary case—a major, multimethod study—examines the development and early implementation of the Common Core State Standards at the national level and in four states: California, Indiana, Massachusetts, and Tennessee. A comparative case analyzes the evidence used in Congressional hearings over the twenty-year history of the Children's Health Insurance Program. Together, the two cases illustrate the conditions under which different types of evidence are used and, in particular, how federalism, the complexity of the policy problem, and the policy's maturity shape evidence use. McDonnell and Weatherford focus on three leverage points for strengthening the use of research evidence in education policy: integrating research findings with value-based policy ideas; designing policies with incentives for research use built into their rules and organizational structures; and training policy analysts to promote the use of research in policymaking venues.

Bahrain's education sector, like education sectors around the world, had to adapt quickly in early 2020 when the first case of COVID-19 was recorded in the country in late February 2020. However, with digital learning already on the rise, universities such as the Arabian Gulf University and the American University were quick to scale up distance learning capacity in order to afford their students an uninterrupted educational experience. Going forward, it is clear that much of what has been learned and developed over this difficult period will carry into the post-COVID-19 period, with blended learning becoming a more permanent fixture at universities in Bahrain, the region, and the world. This 22-page special report includes interviews with the country's top education players, as well as articles and analysis on the state of the sector. It is our hope that it provide a key snapshot of Bahrain's education sector as this crucial moment in its development.

Parents had questions about the tests their children took at school. They considered them to be common sense questions. They posed them to the businesspeople, publishers, and politicians who championed tests. They also posed them to the school administrators, teachers, and union leaders who criticized them. This book examines the questions the parents posed, the answers they elicited, and the changes they prodded.

Education Mania Is a University The New Doctor is about people who think that a college degree is a real degree. In fact, the doctorate is doing the goals of the college. In many ways, the full benefits of a college degree go to the doctorate. Like in the majors in the field of engineering, psychology, and English. there are a lot of college grads around the world who face the food stamp line, and it is contrary to how the university gets people a job. The scandal involves an essay and dissertation. That is an approximately five-chapter essay. Also, the book has introductions to explain to the reader how a university degree becomes a new doctor. My book explores solutions to subject areas that prove the doctor is the new college. The solutions include having college to nothing, getting rid of the bus, child labor, and apprentices.

FROM THE VERY FOUNDING OF OUR NATION, diversity has been one of our greatest strengths but also the greatest source of conflict. In less than a generation, America will become "minority-majority," and the world economy, already interconnected, will be even more globalized. The stakes for how we handle this evolution couldn't be higher. Will diversity be a source of growth, prosperity, and progress-or perpetual division and strife? America has the potential to realize huge gains economically and socially by more fully capitalizing on diversity, but significant challenges remain and it's a problem that all Americans should be focused on solving. Despite tremendous progress, women and minorities still face barriers to accessing the full promise of the American dream. It doesn't have to be this way. Many of the solutions are right in front of us, and many exceptional, committed Americans are doing their part to make a difference. In the twenty-first century, nations will prosper only insofar as they embrace and celebrate the individuals, organizations, and collective efforts to advance every kind of diversity. Lauren Leader-Chivée believes America must lead the way. In *CROSSING THE THINNEST LINE*, she explores the state of our diverse union and shares important stories of progress and potential, highlighting those who are crossing dividing lines of race, gender, culture, and political party to build a more united and prosperous nation. Her revelations will transform the discussion and set the agenda for America's

progress on these critical issues. A work of originality and ambition, *CROSSING THE THINNEST LINE* changes our understanding of diversity and offers lessons to change our lives and our country.

The global crisis revealed that credit rating agencies (CRAs) are capable of bringing about potential distortions in the financial sector, thereby resulting in a reduction in market confidence which, in turn, influences negotiations and expectations. CRAs need to be held accountable for lack of transparency and inaccurate ratings, however the existing regulatory framework does not secure adequate investor protection. This book provides a new and important contribution to research in the area, at a crucial time in the debate around financial regulation and investment regimes.

Innovation in information and production technologies is creating benefits and disruption, profoundly altering how firms and markets perform. Digital DNA provides an in depth examination of the opportunities and challenges in the fast-changing global economy and lays out strategies that countries and the international community should embrace to promote robust growth while addressing the risks of this digital upheaval. Wisely guiding the transformation in innovation is a major challenge for global prosperity that affects everyone. Peter Cowhey and Jonathan Aronson demonstrate how the digital revolution is transforming the business models of high tech industries but also of traditional agricultural, manufacturing, and service sector firms. The rapidity of change combines with the uncertainty of winners and losers to create political and economic tensions over how to adapt public policies to new technological and market surprises. The logic of the policy trade-offs confronting society, and the political economy of practical decision-making is explored through three developments: The rise of Cloud Computing and trans-border data flows; international collaboration to reduce cybersecurity risks; and the consequences of different national standards of digital privacy protection. The most appropriate global strategies will recognize that a significant diversity in individual national policies is inevitable. However, because digital technologies operate across national boundaries there is also a need for a common international baseline of policy fundamentals to facilitate "quasi-convergence" of these national policies. Cowhey and Aronson's examination of these dynamic developments lead to a measured proposal for authoritative "soft rules" that requires governments

to create policies that achieve certain objectives, but leaves the specific design to national discretion. These rules should embrace mechanisms to work with expert multi-stakeholder organizations to facilitate the implementation of formal agreements, enhance their political legitimacy and technical expertise, and build flexible learning into the governance regime. The result will be greater convergence of national policies and the space for the new innovation system to flourish.

Credit rating agencies play an essential role in the modern financial system and are relied on by creditors and investors on the market. In the recent financial crisis, their power and reliability were often questioned, yet a simple rating downgrade could threaten to bankrupt a whole country. This book examines the governance of credit rating agencies, as expressed by their ability to fairly, ethically and consistently assign higher rates to issuers having lesser default risks. However, factors such as the drive for increased revenue and market share, the inadequate business model, the inadequate methodology of assessing risk, opacity and inadequate internal monitoring have all been identified as critical governance failures for credit agencies. This book explores these issues, and proposes some potential solutions and improvements. This will be of interest to researchers and advanced students of corporate finance, finance, financial economics, risk management, investment management, and banking.

Neoliberalism is often studied as a political ideology, a government program, and even as a pattern of cultural identities. However, less attention is paid to the specific institutional resources employed by neoliberal administrations, which have resulted in the configuration of a neoliberal state model. This accessible volume compiles original essays on the neoliberal era in Latin America and Spain, exploring subjects such as neoliberal public policies, power strategies, institutional resources, popular support, and social protest. The book focuses on neoliberalism as a state model: a configuration of public power designed to implement radical policy proposals. This is the third volume in the State and Nation Making in Latin America and Spain series, which aims to complete and advance research and knowledge about national states in Latin America and Spain.

Psychological and Pedagogical Considerations in Digital Textbook Use and Development Oxford University Press

Entire service businesses have been built around the ideas of Heskett, Sasser, and Schlesinger, pioneers in the world of service. Now they test their ideas against the actual experiences of successful and unsuccessful practitioners, as well as against demands of the future, in a book service leaders around the world will use as a guide for years to come. The authors cover every aspect of optimal service leadership: the best hiring, training, and workplace organization practices; the creation of operating strategies around areas such as facility design, capacity planning, queue management, and more; the use—and misuse—of technology in delivering top-level service; and practices that can transform loyal customers into “owners.” Looking ahead, the authors describe the world of great service leaders in which “both/and” thinking replaces trade-offs. It's a world in which new ideas will be tested against the sine qua non of the “service trifecta”—wins for employees, customers, and investors. And it's a world in which the best leaders admit that they don't have the answers and create organizations that learn, innovate, “sense and respond,” operate with fluid boundaries, and seek and achieve repeated strategic success. Using examples of dozens of companies in a wide variety of industries, such as Apollo Hospitals, Châteaufort, Starbucks, Amazon, Disney, Progressive Insurance, the Dallas Mavericks, Whole Foods, IKEA, and many others, the authors present a narrative of remarkable successes, unnecessary failures, and future promise.

South African universities face major challenges in meeting the needs of their students in the area of academic language and literacy. The dominant medium of instruction in the universities is English and, to a much lesser extent, Afrikaans, but only a minority of the national population are native speakers of these languages. Nine other languages can be media of instruction in schools, which makes the transition to tertiary education difficult enough in itself for students from these schools. The focus of this book is on procedures for assessing the academic language and literacy levels and needs of students, not in order to exclude students from higher education but rather to identify those who would benefit from further development of their ability in order to undertake their degree studies successfully. The volume also aims to bring the innovative solutions designed by South African educators to a wider international audience.
