ACT Prep Plus 2022 Neal A. Maxwell Institute for Religious Scholarship Based on course-tested material, this rigorous yet

accessible graduate textbook covers both fundamental and advanced optimization theory and algorithms. It covers a wide range of numerical methods and topics, including both gradient-based and gradient-free algorithms, multidisciplinary design optimization, and uncertainty, with instruction on how to determine which algorithm should be used for

a given application. It also provides an overview of models and how to prepare them for use with numerical optimization, including derivative computation. Over 400 high-quality visualizations and numerous examples facilitate understanding of the theory, and practical tips address common issues encountered in practical engineering design optimization and how to address them. Numerous end-of-chapter homework problems, progressing in difficulty, help put knowledge into practice. Accompanied online by a solutions manual for instructors and source code for problems, this is ideal for a one- or two-semester graduate course on optimization in aerospace, civil, mechanical, electrical, and chemical engineering departments.

Class-tested and coherent, this textbook teaches classical and web information retrieval, including web search and the related areas of text classification and text clustering from basic concepts. It gives an up-to-date treatment of all aspects of the design and implementation of systems for gathering, indexing, and searching documents; methods for evaluating systems; and an introduction to the use of machine learning methods on text collections. All the important ideas are explained using examples and figures, making it perfect for introductory courses in information retrieval for advanced undergraduates and graduate students in computer science. Based on feedback from extensive classroom experience, the book has been carefully structured in order to make teaching more natural

and effective. Slides and additional exercises (with solutions for lecturers) are also available through the book's supporting website to help course instructors prepare their lectures.

This volume examines the development and growing use of online student ratings and the potential impact online rating systems will have on the future of students' evaluations of teaching.

The contributors demonstrate how the preference for online evaluation is growing, even amidst challenges and

doubt. Sharing their first-hand experience as researchers and administrators of online systems, they explore major concerns regarding online student ratings and suggest possible solutions. D. Lynn Sorenson and Christian M. Reiner review existing online-rating systems that have been developed independently across the globe. Kevin Hoffman presents the results of a national survey that tracks the increased use of the Internet for student ratings of instruction. At Northwestern University, Nedra Hardy demonstrates how ongoing research about online student evaluations is helping to dispel common misperceptions. Application of online rating systems can present institutions with new challenges and obligations. Trav D. Johnson details a case study based on five years

of research in the response rates for one university ' s online evaluation system and suggests strategies to increase student participation. Reviewing online reporting of results of online student ratings, Donna C. Llewellyn explores the emerging issues of security, logistics, and confidentiality. Other chapters explore existing online systems, highlighting their potential benefits for institution and instructor alike. Beatrice Tucker, Sue Jones, Lean Straker, and Joan Cole analyze Course Evaluation on the Web (CEW), a comprehensive online system for instructional feedback and improvement. Cheryl Davis Bullock reviews the Evaluation Online (EON) system and its successful role in facilitating midcourse student feedback. The fate of online rating may rest in the unique advantages it may – or may not – have over traditional ratings systems. Debbie E. McGhee and Nana Lowell compare online and paper-based methods through mean ratings, inter-rater reliabilities and factor structure of items. Comparing systems from another angle, Timothy W. Bothell and Tom Henderson examine the fiscal costs and benefits of implementing an online evaluation system over paper-based systems. Finally, Christina Ballantyne considers the prominent issues and thought-provoking ideas for the future of online student ratings raised in this volume. Together, the contributors bring insight and understanding to the processes involved in researching and initiating innovations in online-rating systems. This is the 96th issues of the quarterly journal *New Directions for Teaching and Learning*.

Autonomous unmanned air vehicles (UAVs) are critical to current and future military, civil, and commercial operations. Despite their importance, no previous textbook has accessibly introduced UAVs to students in the engineering, computer, and science disciplines--until now. *Small Unmanned Aircraft* provides a concise but comprehensive description of the key concepts and technologies underlying the dynamics, control, and guidance of fixed-wing unmanned aircraft, and enables all students with an introductory-

level background in controls or robotics to enter this exciting and important area. The authors explore the essential underlying physics and sensors of UAV problems, including low-level autopilot for stability and higher-level autopilot functions of path planning. The textbook leads the student from rigid-body dynamics through aerodynamics, stability augmentation, and state estimation using onboard sensors, to maneuvering through obstacles. To facilitate understanding, the authors have replaced traditional homework assignments with a simulation project using the MATLAB/Simulink

environment. Students begin by modeling rigid-body dynamics, then add aerodynamics and sensor models. They develop low-level autopilot code, extended Kalman filters for state estimation, path-following routines, and high-level path-planning algorithms. The final chapter of the book focuses on UAV guidance using machine vision. Designed for advanced undergraduate or graduate students in engineering or the sciences, this book offers a bridge to the aerodynamics and control of UAV flight.

The Book of Mormon Made Harder Cengage Learning

The prophet Brigham Young taught the restored gospel of Jesus Christ in a basic, practical way that gave inspiration and hope to the Saints struggling to build a home in the wilderness. Though more than a century has now passed, his words are still fresh and appropriate for us today as we continue the work of building the kingdom of God. President Young declared that as members of The Church of Jesus Christ of Latter-day Saints we possess the “doctrine of life and salvation for all the honest-in-heart” (DBY, 7). He promised that those who receive the gospel in their hearts will have awakened “within them a desire to know and understand the things of God more than they ever did before in their lives” and will begin to “inquire, read and search and when they go to their Father in the name of Jesus he will not leave them without a witness” (DBY, 450). This book reflects the desire of the First

Presidency and the Quorum of the Twelve Apostles to deepen the doctrinal understanding of Church members and to awaken within them a greater desire to know the things of God. It will inspire and motivate individuals, priesthood quorums, and Relief Society classes to inquire, read, search, and then go to their Father in Heaven for a witness of the truth of these teachings. Each chapter contains two sections—“Teachings of Brigham Young” and “Suggestions for Study.” The first section consists of extracts from Brigham Young’s sermons to the early Saints. Each statement has been referenced, and the original spelling and punctuation have been preserved; however, the sources cited will not be readily available to most members. These original sources are not necessary to have in order to effectively study or

Members need not purchase additional references and commentaries to study or teach these chapters. The text provided in this book, accompanied by the scriptures, is sufficient for instruction. Members should prayerfully read and study President Young’s teachings in order to gain new insights into gospel principles and discover how those principles apply to their everyday lives. By faithfully and prayerfully studying these selections, Latter-day Saints will have a greater understanding of gospel principles and will more fully appreciate the profound and inspired teachings of this great prophet. The second section of each chapter offers a series of questions that will encourage thoughtful contemplation, personal application, and discussion of President Young’s teachings.

Members should refer to and carefully reread his words on the principle being discussed. Deep and prayerful study of these teachings will inspire members to greater personal commitment and will help them resolve to follow the teachings of the Savior, Jesus Christ. If individuals and families prayerfully follow the principles in this book, they will be blessed and inspired to greater dedication and spirituality, as were the early Saints who heard these words directly from the lips of the “Lion of the Lord” (HC, 7:434)—the prophet, seer, and revelator, President Brigham Young.

A gripping story of how an entire family, deeply enmeshed in Mormonism for thirty years, found their way out and found faith in Jesus Christ. For thirty years, Lynn Wilder, once a tenured faculty member at Brigham Young University, and her family lived in, loved, and promoted the

Mormon Church. Then their son Micah, serving his Mormon mission in Florida, had a revelation: God knew him personally. God loved him. And the Mormon Church did not offer the true gospel. Micah's conversion to Christ put the family in a tailspin. They wondered, Have we believed the wrong thing for decades? If we leave Mormonism, what does this mean for our safety, jobs, and relationships? Is Christianity all that different from Mormonism anyway? As Lynn tells her story of abandoning the deception of Mormonism to receive God's grace, she gives a rare look into Mormon culture, what it means to grow up Mormon, and why the contrasts between Mormonism and Christianity make all the

difference in the world. Whether you are in the Mormon Church, are curious about Mormonism, or simply are looking for a gripping story, *Unveiling Grace* will strengthen your faith in the true God who loves you no matter what.
