### XML Programming with C++

XML Example. XML documents create a hierarchical structure looks like a tree so it is known as XML Tree that starts at "the root" and branches to "the leaves". Example of XML Document. XML documents uses a self-describing and simple syntax:

C Create XmlDocument Example  
In the above example, we typed various items on the same line. If you are creating a long XML document, although creating various items on the same line is acceptable, this technique can make it (very) difficult to read. One way you can solve this problem is to separate tags with empty spaces. Here is an example:

```

generated XML into various objects.  
Before we create a complex XML document, let's create a simple XML.

```
// Create a text string, which is  
used to output the text file string  
myText; // Read from the text file  
ifstream  
MyReadFile("filename.txt"); // Use  
a while loop together with the  
getline() function to read the file  
line by line
