The last ten years have seen explosive growth in the technology available to the collision analyst, changing the way reconstruction is practiced in fundamental ways. The greatest technological advances for the crash reconstruction community have come in the realms of photogrammetry and digital media analysis. The widespread use of scanning technology has facilitated the implementation of powerful new tools to digitize forensic data, create 3D models and visualize and analyze crash

vehicles and environments. The introduction of unmanned aerial systems and standardization of crash data recorders to the crash reconstruction community have enhanced the ability of a crash analyst to visualize and model the components of a crash reconstruction. Because of the technological changes occurring in the industry, many SAE papers have been written to address the validation and use of new tools for collision reconstruction. Collision Reconstruction Methodologies Volumes 1-12 bring together seminal SAE technical papers surrounding advancements in the crash reconstruction field. Topics featured in the series include: • Night Vision Study and Photogrammetry • Vehicle Event Data Recorders • Motorcycle, Heavy Vehicle, Bicycle and Pedestrian Accident Reconstruction The goal is to provide the latest technologies and methodologies being introduced into collision reconstruction - appealing to crash analysts, consultants and safety engineers alike.

In subsequent chapters the author builds a computer model of the P-40B fighter, gradually introducing new methods and tools. Every step of this workflow is shown in numerous illustrations. This first volume ("Preparations") describes how to prepare and verify the reference drawings, which you need to build a 3D model. "Preparations" also discusses various methods of checking and enhancing these reference images. It can be useful, as a guide on its own, for all who would like to draw accurate scale plans. You can learn there how to use photos and original aircraft documentation (including manufacturer's blueprints).

The purpose of this handbook is to provide aviation enthusiasts with a simple checklist on where to find the surviving retired military aircraft that are preserved in Canada. The majority of the Canadian Warbird Survivors are on display within a great number of well maintained aviation museums, many others are displayed as gate guards near or in a number of Canadian Forces Bases, and a good number are in the hands of private collectors. Many are not listed in any catalogue, but have been found by word of mouth, or personal observation. The museum staffs and volunteer organizations throughout Canada have done a particularly good job of preserving the great variety of Canadian military aircraft, illustrated here. Hopefully, as more aircraft are recovered from their crash sites in the bush and restored, traded or brought back from private owners, they too will be added to the record. The book lists the aircraft alphabetically by manufacturer, number and type. This list is also appended with a brief summary of the aircraft presently on display within the nation and a bit of its history within the Canadian Forces. Canadian Warbirds books are available through the iUniverse.com or the Amazon.com online bookstores.
