**Cities by Design** Univ of California Press  
Originally published in 1898 as *To-Morrow: A peaceful path to reform*, "the book", writes F.J. Osborn "holds a unique place in town planning literature, is cited in all planning bibliographies, stands on the shelves of the more important libraries, and is alluded to in most books on planning; yet most of the popular writers on planning do not seem to have read it - or if they have read it, to remember what it says." The book led directly to two experiments in town-founding that by imitation, and imitation of imitation, have had a profound influence on practical urban development throughout the world. The book was responsible for the introduction of the term Garden City in numbers of languages - Cite-Jardin, Gartenstadt, Ciudad-jardin, Tuinstad - and set into motion ideas that have helped transform the scientific and political outlook on town structure and town growth. With urban renewal and the development of suburban communities as features of the contemporary American scene, *Garden cities of To-Morrow* becomes "must" reading. In the words of Lewis Mumford: "This is not merely a book for Technicians: above all it is a book for citizens, for the people whose actively expressed needs, desires and interests should guide the planner and administrator at every turn." This book was first published in its current form in 1965.

## The City Cities of Tomorrow

While the official history of planning as a defined profession celebrates the state and its traditions of city building and regional development, this collection of essays reveals a flip side. This scrutiny of the class, race, gender, ethnic, or other biased agendas previously hidden in planning histories points to the need for new planning paradigms for our multicultural cities of the future. ## *Great Planning Disasters* Wiley-Blackwell

Thirty years after its publication, *The Death and Life of Great American Cities* was described by *The New York Times* as "perhaps the most influential single work in the history of town planning....[It] can also be seen in a much larger context. It is first of all a work of literature; the descriptions of street life as a kind of ballet and the biting satiric account of traditional planning theory can still be read for pleasure even by those who long ago absorbed and appropriated the book's arguments." Jane Jacobs, an editor and writer on architecture in New York City in the early sixties, argued that urban diversity and vitality were being destroyed by powerful architects and city planners. Rigorous, sane, and delightfully epigrammatic, Jacobs's small masterpiece is a blueprint for the humanistic management of cities. It is sensible, knowledgeable, readable, indispensable. The author has written a new foreword for this Modern Library edition.

The design of every aspect of the urban landscape - from streets and sidewalks to green spaces, mass transit, and housing - fundamentally influences the health and safety of the communities who live there. It can affect people's stress levels and determine whether they walk or drive, the quality of the air they breathe, and how free they are from crime. *Changing Places* provides a compelling look at the new science and art of urban planning, showing how

scientists, planners, and citizens can work together to reshape city life in measurably positive ways.

Ranging over 2,500 years, *Cities in Civilization* is a tribute to the city as the birthplace of Western civilization. Drawing on the contributions of economists and geographers, of cultural, technological, and social historians, Sir Peter Hall examines twenty-one cities at their greatest moments. Hall describes the achievements of these golden ages and outlines the precise combinations of forces -- both universal and local -- that led to each city's belle époque. Hall identifies four distinct expressions of civic innovation: artistic growth, technological progress, the marriage of culture and technology, and solutions to evolving problems. Descriptions of Periclean Athens, Renaissance Florence, Elizabethan London, and nineteenth-century Vienna bring to life those seedbeds of artistic and intellectual creativity. Explorations of Manchester during the Industrial Revolution, of Henry Ford's Detroit, and of Palo Alto at the dawn of the computer age highlight centers of technological advances. Tales of the creation of Los Angeles' movie industry and the birth of the blues and rock 'n' roll in Memphis depict the marriage of culture and technology. Finally, Hall celebrates cities that have been forced to solve problems created by their very size. With Imperial Rome came the apartment block and aqueduct; nineteenth-century London introduced policing, prisons, and sewers; twentieth-century New York developed the skyscraper; and Los Angeles became the first city without a center, a city ruled instead by the car. And in a fascinating conclusion, Hall speculates on urban creativity in the twenty-first century. This penetrating study reveals not only the lives of cities but also the lives of the people who built them and created the civilizations within them. A decade in the making, *Cities in Civilization* is the definitive account of the culture of cities.

Since cities emerged ten thousand years ago, they have become one of the most impressive artifacts of humanity. But their evolution has been anything but linear—cities have gone through moments of radical change, turning points that redefine their very essence. In this book, a renowned architect and urban planner who studies the intersection of cities and technology argues that we are in such a moment. The authors explain some of the forces behind urban change and offer new visions of the many possibilities for tomorrow's city. Pervasive digital systems that layer our cities are transforming urban life. The authors provide a front-row seat to this change. Their work at the MIT Senseable City Laboratory allows experimentation and implementation of a variety of urban initiatives and concepts, from assistive condition-monitoring bicycles to trash with embedded tracking sensors, from mobility to energy, from participation to production. They call for a new approach to envisioning cities: futurecraft, a symbiotic development of urban ideas by designers and the public. With such participation, we can collectively imagine, examine, choose, and shape the most desirable future of our cities.

Knighted in 1998 'for services to the Town and Country Planning Association', and in 2003 named by Her Majesty Queen Elizabeth II as a 'Pioneer in the Life of the Nation', Peter Hall is internationally renowned for the breadth and depth of his studies and writings on urban and regional planning. For the last 50 years, he has captured and helped to create the 'planning imagination'. Here the editors have brought together in five themes a series of critical reflections on Peter's vast and diverse contributions. Those reflections are provided by colleagues familiar with his work. The five parts are devoted to Peter Hall's breadth of academic work, covering the history of cities and planning, London, spatial planning, connectivity and mobility, and urban globalization. Finally, as a sixth part, the editors have asked Peter Hall himself to reflect on his career and the sources of his imagination. The story this book tells is not one of a singular, totally consistent theoretical and philosophical view elaborated over several decades. Rather it covers a set of views that necessarily admits signs of Peter's inconsistency and imperfection over the years – the insights and imperfections

that inevitably accompany the exercise of a nonetheless remarkably fertile, restless and inspiring planning imagination. *The Death and Life of Great American Cities* Taylor & Francis  
Urban planning in today's world is inextricably linked to the processes of mass urbanization and modernization which have transformed our lives over the last hundred years. Written by leading experts and commentators from around the world, this collection of original essays will form an unprecedented critical survey of the state of urban planning at the end of the millennium.

This book is a unique collection: ordinary Londoners, in their own voices, tell about ordinary London lives. Interviews with over a hundred people in eight localities, from inner-city Battersea, to suburban Heston, to Greenhithe on the London fringe, have been edited with a linking commentary by Professor Sir Peter Hall. The first half, *London Voices*, introduces the characters - their hopes and aspirations, their frustrations and struggles, their determination and optimism. The second, *London Lives*, introduces the themes that dominate their everyday lives: the struggle to keep their heads above water, the search for a place to live, the hassle of the journey to work, their friends and neighbours, their concerns about crime, and the quality of their everyday lives. This is not only an extraordinary social record but also a compelling read for anyone and everyone interested in today's London, or in any other great global city. It will provide a mine of information for future historians on one of the world's greatest cities and will be of special academic or professional interest to sociologists, anthropologists, geographers, planners and social policymakers.

## *Exposed by the Mask* Univ of California Press

In these four lectures Peter Hall reveals a lifetime of discoveries about classical theatre, Shakespeare, opera and modern drama. The central argument is that form and structured language paradoxically give freedom to power of thought and feeling, much as the masks of early Greek drama enabled actors to express extreme emotion. The mask may take many forms – the precise language of Beckett and Pinter, the classical form of Mozart's operas, or Shakespeare's verse. Reprinted to form part of the Oberon Masters series, a brand new collection of attractive hardbacks on key themes within the arts written by leading lights in each subject.

A fictionalized retelling of how books from around the world helped children in Germany recuperate after WWII. Anneliese and Peter will never be the same after the war that took their father's life. One day, while wandering the ruined streets of Munich, the children follow a line of people entering a building, thinking there may be free food inside. Instead, they are delighted to discover a great hall filled with children's books — more books than Anneliese can count. Here, they meet the lady with the books, who will have a larger impact on the children's lives than they could have ever imagined. The place between despair and hope can often be found between the covers of a book.

*Sociable Cities* Routledge

Following the Second World War, modern systems of urban and regional planning were established in Britain and most other developed countries. In this book, Nigel Taylor describes the changes in planning thought which have taken place since then. He outlines the main theories of planning, from the traditional view of urban planning as an exercise in physical design, to the systems and rational process views of planning of the 1960s; from Marxist accounts of the role of planning in capitalist society in the 1970s, to theories about planning implementation, and more recent views of planning as a form of 'communicative action'.

*The City Reader* Routledge

*New Urbanism and American Planning* John Wiley & Sons

A comprehensive new survey tracing the global history of urbanism and urban design from the industrial revolution to the present. Written with an international perspective that encourages cross-cultural comparisons, leading architectural and urban historian Eric Mumford presents a comprehensive survey of urbanism and urban design since the industrial revolution. Beginning in the second half of the 19th century, technical, social, and economic developments set cities and the world's population on a course of massive expansion. Mumford recounts how key figures in design responded to these changing circumstances with both practicable proposals and theoretical frameworks, ultimately creating what are now mainstream ideas about how urban environments should be designed, as well as creating the field called "urbanism." He then traces the complex outcomes of approaches that emerged in European, American, and Asian cities. This erudite and insightful book addresses the modernization of the traditional city, including mass transit and sanitary sewer systems, building legislation, and model tenement and regional planning approaches. It also examines the urban design concepts of groups such as CIAM (International Congresses of Modern Architecture) and Team 10, and their adherents and critics, including those of the Congress for the New Urbanism, as well as efforts toward ecological urbanism. Highlighting built as well as unbuilt projects, Mumford offers a sweeping guide to the history of designers' efforts to shape cities.

*Sociable Cities* Bloomsbury Publishing

Who makes our cities, and what part do everyday users have in the design of cities? This book powerfully shows that city-making is a social process and examines the close relationship between the social and physical shaping of urban environments. With cities taking a growing share of the global population, urban forms and urban experience are crucial for understanding social injustice, economic inequality and environmental challenges. Current processes of urbanization too often contribute to intensifying these problems; cities, likewise, will be central to the solutions to such problems. Focusing on a range of cities in developed and developing contexts, *Cities by Design* highlights major aspects of contemporary urbanization: urban growth, density and sustainability; inequality, segregation and diversity; informality, environment and infrastructure. Offering keen insights into how the shaping of our cities is shaping our lives, *Cities by Design* provides a critical exploration of key issues and debates that will be invaluable to students and scholars in sociology and geography, environmental and urban studies, architecture, urban design and planning.
