Textbook of Clinical Dermatology Saunders

The best-selling text has been completely revised and revitalised in this fifth edition, with the authors once again encouraging general practitioners, medical students, general physicians and early stage dermatology specialist trainees and interns to relish the unique challenge of diagnosing and treating skin conditions.

Clinical Dermatology, 5th edition contains over 400 high quality pictures and diagrams combined with colourful phrases to illustrate and entertain as it teaches. The book has established a reputation as a 'way of learning' and as an accessible guide to the subject for the aspiring specialist. Readers are guided through the maze that too often lies between the presenting skin complaint and its final diagnosis and treatment. The authors have skilfully crafted an easily read text with enough detail to clarify the subject, but not enough to obscure it. This fifth edition contains new chapters on non-invasive physical treatment and dermoscopy, and new material on cosmetic dermatology, surgical dermatology, the skin and the psyche, and dermatoses of non-Caucasian skin. The text throughout the book has been updated in line with developments in the science and practice of dermatology. " ... brilliantly succeeds in enticing you to look further. The writing is clear, and the joint British-American authorship avoids any parochial views. " From a review of a previous edition in BMJ " ...a very well-presented book...an excellent aid for teaching. I recommend this book highly to individuals and departments. " From a review of a previous edition in J Derm Treatment " ... provides a good overview of the structure and function of the skin as well as a good foundation for learning dermatology...well organized and includes a chapter dedicated to skin signs of systemic disease which is not covered in the other dermatology primers. Books on dermatology are either focused for medical students or for students of dermatology. A general practitioner sees a lot of skin patients; about 17% of their patients are related to skin disease. We therefore decided to write a book that should meet the needs of a general practitioner. To make the book helpful for the primary care physician, we have focused more on common skin problems and have discussed the diagnosis and treatment of these disorders in depth to help the general practitioner in diagnosing and treating them. The chapter on the management of skin diseases also gives the details of topical, systemic, and the physical modalities used in treating skin disease. Uncommon skin diseases are only mentioned where required. The chapter on cutaneous manifestations of systemic diseases will

help the general practitioner to correlate the cutaneous signs of the common medical problems seen by them. Emphasis is laid on the bacterial, fungal, and parasitic disorders that are prevalent in tropical countries. We have included the common diseases of other continents, as the general practitioner especially of developed countries has patients from all over the world. Congenital and hereditary disorders are discussed with the corresponding chapters, which makes it easier for the reader to remember. A number of practical points are included with each subject, and history of dermatology is included where appropriate to make the subject interesting to read.

Skin Disease Clinical Dermatology
Each dermatologist that was board certified after 1992 is required by the American Board of Dermatology to take a recertification exam every ten years. One of the major components of the exam is to be able to identify clinical photographs of approximately 200 skin diseases, and while there are other components to the test, they vary according to subspecialty. However,

everyone is required to identify the images, so several months before the exam, the American Board of Dermatology releases a list of the skin diseases that will be tested, but does not provide the images or reveal which ones will appear. Review of Clinical Conditions for the Dermatology Recertification Examination provides a thorough, concise review of clinical images of the specific conditions that the reader will be required to recognize during the American Board of Dermatology recertification test. In addition, concise key clinical features for each image will be provided that will assist the reader in recognizing the clinical images on the examination, enabling them a more efficient way to study for the test without having to look up images online or in a large text book. Written by a board certified dermatologic surgeon who recently took the recertification exam, this book proves

indispensable to dermatologists taking the exam or residents who want a quick reference of the clinical appearances of the main conditions generally encountered by a dermatologist.
