Introduction to Teaching: Helping Students Learn provides students and instructors with the tools with which they can achieve the many goals of today's Introduction to Education course or its equivalent. The book introduces prospective teachers to the dynamic world of teaching and learning and to the realities of the classroom experience by providing engaging student-focused activities, rich real-life examples, and thoughtful reflective exercises that will encourage students to think critically and to develop their own ideas and personal philosophy of education. This active learning approach enables prospective teachers to develop both a knowledge core about education and the critical tools they will need to meet the challenges they will face as educators in today's fast-paced, highly connected society. By exposing students to the realities of teaching, the book will help students decide if teaching is the right career for them. This text is built around two themes that are central to an exploration of the professional education field: student learning and diverse voices. As students consider a teaching career, it is important that they not lose sight of what is the most fundamental goal of education—to help students learn. The text will encourage students to examine each aspect of education as it relates to student learning. Additionally, as students explore the possibilities in being a teacher, they will begin to develop their own philosophy of education. This text will provide the

prospective teacher with opportunities to explore multiple perspectives on a variety of issues of importance to today's teachers, and encourage the reader to develop his or her own personal voice as an educator and to make that voice heard in the educational community.

Introduction to Teaching Routledge
This much-anticipated fifth edition of Exploring Education offers an alternative to traditional foundations texts by combining a point-of-view analysis with primary source readings. Pre- and in-service teachers will find a solid introduction to the foundations disciplines -- history, philosophy, politics, and sociology of education -- and their application to educational issues, including school organization and teaching, curriculum and pedagogic practices, education and inequality, and school reform and improvement. This edition features substantive updates, including additions to the discussion of neo-liberal educational policy, recent debates about teacher diversity, updated data and research, and new selections of historical and contemporary readings. At a time when foundations of education are marginalized in many teacher education programs and teacher education reform pushes scripted approaches to curriculum and instruction, Exploring Education helps teachers to think critically about the "what" and "why" behind the most pressing issues in contemporary education.

This edited collection addresses the institutional context and social issues in which teaching the women's studies introductory course is embedded and provides readers with practical classroom strategies to meet the challenges raised. The collection serves as a resource and preparatory text for all teachers of the course including experienced teachers, less experienced teachers, new faculty, and graduate student teaching assistants. The collection will also be of interest to educational scholars of feminist and progressive pedagogies and all teachers interested in innovative practices. The contributors discuss the larger political context in which the course has become a central representative of women's studies to a growing, although less feminist-identified, population. Increased enrollments and changes in student population are noted as a result, in part, of the popularity of Introduction to Women's Studies courses in fulfilling GED and diversity requirements. New forms of student resistance in a climate of backlash and changes in course content in response to internal and external challenges are also discussed. Evidence is provided for an emerging paradigm in the conceptualization of the introductory course as a result of challenges to racism, heterosexism, and classism in women's studies voiced by women of color and others in the 1980s and 1990s. Sensationalist charges that women's studies teachers, including those who teach the Introduction to Women's Studies course, are the academic shock troops of a monolithic feminism are challenged and refuted by the collection's contributors who share their struggles to make possible classrooms in which informed dialogue and disagreement are valued.

University Teaching: An Introductory Guide is a vital tool for the new lecturer that aims to encourage and support an inquiry into university teaching and academic life. This book understands that teaching is not discrete but one of many activities integrated in academic work. It recognizes that teaching is directly affected by administrative concerns such as timetabling and workload demands, departmental culture, disciplinary research expectations and how we think about the purposes and values of higher education. The new lecturer must learn to adapt to and shape the circumstances of their academic work.

Understanding that teaching is an integral part of this work, rather than a dislocated discipline, can help us think about practice in new ways. Harland argues against the teaching-research divide and popular opinion that ' teaching takes time away from research ' . He proffers the sentiment that all aspects of academic practice need to be considered when inquiring into learning how to teach, and that teaching is better understood when it is firmly embedded and integrated in this work. Writing from his experience extracted from a ten-year research project working with early career staff, he addresses popular concerns of academics, including: Lecturing Peer review of teaching Discussion as an approach to teaching Research and the new academic The subject and the idea of critical thinking This clearly written and practical book will be ideal for all new lecturers in higher education, and also more seasoned academics wishing to progress their professional development. Tony Harland is Associate Professor at the Higher Education Development Centre, University of Otago, New Zealand
