This work proposes an entirely new type of plants, with a vertical axis of rotation, and with reduced costs, due to the method of construction and to the reduction in materials used. In addition, the most interesting aspect is the possibility of constructing plants that are much more powerful than those existing at present with a linear increase of the costs/power ratio. In fact, by building plants with an effective power 20 times greater than that of the most powerful current wind power plants built to date, about 68,000 plants would be sufficient to meet today's world energy needs satisfied by non-renewable sources. Furthermore, in a future scenario with world population increased to 10 billion and average consumption per capita equal to that of the most industrialized countries (but excluding countries with high consumption of energy), the overall energy needs would be covered by about 165,000 plants.

global climate change and the u.s. climate action report Cambridge University Press

This Intergovernmental Panel on Climate Change Special Report (IPCC-SREX) explores the challenge of understanding and managing the risks of climate extremes to advance climate change adaptation. Extreme weather and climate events, interacting with exposed and vulnerable human and natural systems, can lead to disasters. Changes in the frequency and severity of the physical events affect disaster risk, but so do the spatially diverse and temporally dynamic patterns of exposure and vulnerability. Some types of extreme weather and climate events have increased in frequency or magnitude, but populations and assets at risk have also increased, with consequences for disaster risk. Opportunities for managing risks of weather- and climate-related disasters exist or can be developed at any scale, local to international. Prepared following strict IPCC procedures, SREX is an invaluable assessment for anyone interested in climate extremes, environmental disasters and adaptation to climate change, including policymakers, the private sector and academic researchers.

Financial Management Granth S. Chand Publishing

This Intergovernmental Panel on Climate Change Special Report (IPCC-SRREN) assesses the potential role of renewable energy in the mitigation of climate change. It covers the six most important renewable energy sources - bioenergy, solar, geothermal, hydropower, ocean and wind energy - as well as their integration into present and future energy systems. It considers the environmental and social consequences associated with the deployment of these technologies and presents strategies to overcome technical as well as non-technical obstacles to their application and diffusion.

SRREN brings a broad spectrum of technology-specific experts together with scientists studying energy systems as a whole. Prepared following strict IPCC procedures, it presents an impartial assessment of the current state of knowledge: it is policy relevant but not policy prescriptive. SRREN is an invaluable assessment of the potential role of renewable energy for the mitigation of climate change for policymakers, the private sector and academic researchers.

Managing the Risks of Extreme Events and Disasters to Advance Climate Change Adaptation Cambridge University Press

- New York Times bestseller
- The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world

“ At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope. ” —Per Espen Stoknes, Author, What We Think About When We Try Not To Think About Global Warming

“ There's been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom. ” —David Roberts, Vox

“ This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook. ” —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA

In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth's warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

Summary on IDT Penguin

'UN Secretary-General Ban Ki-moon has called Climate Change "the defining issue of our era". It presents international law and lawyers with a wide range of novel issues, practical as well as conceptual. These challenges are addressed in this volume with great authority by many of the leading international law scholars of our generation. It is an important and distinctive contribution to the burgeoning literature on an issue critical for the future of our planet.' – David Freestone, George Washington University, US

Climate change will fundamentally affect every area of human endeavour, including the development of international law. This book maps the current and potential impacts of climate change on the norms, principles, rules and processes of international law. This timely study brings together a group of leading scholars in their respective fields of international law to examine the impacts of climate change, and our responses to it, on the whole spectrum of international legal regimes, including those dealing with everything from climate displacement, human rights, and international trade and investment, to the oceans, the environment, armed conflicts and the use of force, and outer-space. The volume also examines the impacts of climate change on the underlying principles and processes of international law including those relating to the making and enforcement of international law and to third party dispute resolution. The book shows that there is much more to dealing with climate change than negotiating one global climate change-specific regime. Other areas of international law can, and must, be included in the solution. In this way international law can maximise its coherence and its efficacy. This well-documented study will appeal to international lawyers, academics, policy makers, government employees, negotiators, practitioners, international legal theorists and anyone interested in climate change and how to maximise our international legal and policy responses to it.

First Edition of this book got released at the end of November 2014 and took the blessings of “ The Trio ” of CA Education – SSR sir, RSN sir and MFJ sir and went into the hands of MT Educare students, with the administrative support of Mr. Sheik sir & Team. This book has got an unbelievable response and students just showered praises on me (the actual credit should go to almighty). Students rejoiced reading this pocket book and gave good insights to make it more wonderful. Its Exam time in May 2015 and many students asked me “ Sir what to read in indirect tax? ” and I gave only one reply “ Revise That ’ s it...!!! ” and post completion of exams, my Gmail and facebook flooded with appreciation of that ’ s it as it was very handy for them before exam and they are able to perform well in exams. The point is so simple; in subjects like indirect tax you should be very strong on provisions and intricate points and should have conceptual clarity. Finally, when you revise and revise, you will have command over the subject and will be waiting for the question paper to arrive. Now, you are holding the second edition of this book and hope you too make best use out of this book for your exams. In this edition amendments carried out upto April 30, 2014 has been covered, which are applicable for November 2015 exams
