Books and Pamphlets, Including Serials and Contributions to Periodicals Detroit Iron

A User's Guide to Business Analytics provides a comprehensive discussion of statistical methods useful to the business analyst. Methods are developed from a fairly basic level to accommodate readers who have limited training in the theory of statistics. A substantial number of case studies and numerical illustrations using the R-software package are provided for the benefit of motivated beginners who want to get a head start in analytics as well as for experts on the job who will benefit by using this text as a reference book. The book is comprised of 12 chapters. The first chapter focuses on business analytics, along with its emergence and

application, and sets up a context for the whole book. The next three chapters introduce R and provide a comprehensive discussion on descriptive analytics, including numerical data summarization and visual analytics. Chapters five through seven discuss set theory, definitions and counting rules, probability, random variables, and probability distributions, with a number of business scenario examples. These chapters lay down the foundation for predictive analytics and model building. Chapter eight deals with statistical inference and discusses the most common testing procedures. Chapters nine through twelve deal entirely with predictive analytics. The chapter on regression is quite extensive, dealing with model development and model complexity from a user ' s

perspective. A short chapter on tree-based methods puts forth the main application areas succinctly. The chapter on data mining is a good introduction to the most common machine learning algorithms. The last chapter highlights the role of different time series models in analytics. In all the chapters, the authors showcase a number of examples and case studies and provide guidelines to users in the analytics field.

Cadillac Eldorado and Seville Detroit Iron

"In 1948 while the rest of the industry geared up to selling their warmed over pre World War II models, Cadillac introduced an all new design with styling cues taken from a World War II fighter plane, the P-38. The plane's twin tail booms inspired the rear fender tail fins. An ERA was born. Tail fins would

dominate the US auto industry for the next two decades. Welcome to the 1950's and 1960's. Tail-fins, lots of chrome and bright colors. The big American cars we all love." --Back cover.
