Takt time is calculated as the amount of manufacturing time that is available divided by the volume of orders. In the 1930s, the German aviation industry employed Takt for the first time as a production management tool. The idea was widely used within Toyota in the 1950s, and by the late 1960s, it had been adopted by the majority of the Toyota supplier base. Every month, Toyota assesses the takt for a process, with a modifying

This book is aimed at all spreadsheet users, from the complete beginner to those familiar with VisiCalc who wish to use ready-made spreadsheets ('templates') to help run small businesses or to perform technical calculations. The section aimed at the complete beginner assumes no knowledge of VisiCalc or of any other spreadsheet, but teaches the basic principles of spreadsheets, using VisiCalc as the medium. Once VisiCalc is understood, it is easy to convert to any other spreadsheet. The skilled VisiCalc user is introduced to the concept of 'templates' or 'master spreadsheets' and hints on designing them are included. Spreadsheets in general, and VisiCalc in particular, are normally used in financial applications, but they have other uses. Several technical spreadsheets are included to stimulate the imagination as well as others for use in education. Finally the authors show how VisiCalc can even be fun!
