Arithmetic is still hugely important in many aspects of modern life, but our personal attitudes to it differ greatly. Many people struggle with the basic principles of arithmetic, whilst others love it and feel confident in their arithmetical abilities. Why are there so many individual differences in people's performance in, and feelings about, arithmetic? Individual Differences in Arithmetic explores the idea that there is no such thing as arithmetical ability, only arithmetical abilities. The book discusses several important components of arithmetic, from counting principles and procedures to arithmetical estimation, alongside emotional and cognitive components of arithmetical performance. This edition has been extensively revised to include the latest research, including recent cross-cultural and cross-linguistic research, the development of new interventions for children with difficulties and studies of early foundations of mathematical abilities. Drawing on developmental, educational, cognitive and neuropsychological studies, this book will be essential reading for all researchers of mathematical cognition. It will also be of interest to educators and other professionals working within individuals with arithmetic deficits.

*Mergers, Acquisitions, and Other Restructuring Activities: An Integrated Approach to Process, Tools, Cases, and Solutions*, Tenth Edition, is the most comprehensive and cutting-edge text available on the subject. Supported by recent peer-reviewed academic research, this book provides many recent, notable deals, precedent-setting judicial decisions, government policies and regulations, and trends affecting M&As, as well as takeover strategies and tactics. Today's policies, politics and economics are reflected in the book's 40 case studies, 90% of which involve deals either announced or completed during the last several years. These cases represent friendly, hostile, highly leveraged, and cross-border transactions in ten different industries, involving public and private firms and those experiencing financial distress. Sections discuss an overview of M&As, key regulations, common strategies and tactics, how managers may choose a business strategy from available options, valuation methods and basic financial modeling techniques, the negotiating process, how deal structuring and financing are inextricably linked, how consensus is reached during the bargaining process, the role of financial models in closing the deal and strategic growth options as alternatives to domestic M&As. Provides a rigorous discussion of the strengths and limitations of financial modeling as applied to M&A and how these models can be applied in various areas Includes new academic research and updated/revised case studies Presents updated M&A tactics and strategies, along with court cases and new regulations governing business combinations, valuation methodologies and financing

Raises two important and related issues: the changing social aspects of math and the quality of math schemes and textbooks. Math is no longer a subject studied by intellectuals but has become a subject for study by all children aged 5 to 16 years. The continuing failure of many children in this subject is cause for concern.

Dowling critically examines textbooks, and the part they play in children's learning. He clearly shows the reader how to analyze and evaluate textbooks they are currently using. This interrogation of classroom resources has important implications for teaching strategies and for textbook design and use.

Engineers looking for an accessible approach to calculus will appreciate Young's introduction. The book offers a clear writing style that helps reduce any math anxiety they may have while developing their problem-solving skills. It incorporates Parallel Words and Math boxes that provide detailed annotations which follow a multi-modal approach. Your Turn exercises reinforce concepts by allowing them to see the connection between the exercises and examples. A five-step problem solving method is also used to help engineers gain a stronger understanding of word problems.
