The Politics of Actually Existing Unsustainability Springer Science & Business Media

This volume is dedicated to Hiroakira Ono life's work on substructural logics. Chapters, written by well-established academics, cover topics related to universal algebra, algebraic logic and the Full Lambek calculus; the book includes a short biography about Hiroakira Ono. The book starts with detailed surveys on universal algebra, abstract algebraic logic, topological dualities, and connections to computer science. It further contains specialised contributions on connections to formal languages (recognizability in residuated lattices and connections to the finite embedding property), covering systems for modal substructural logics, results on the existence and disjunction properties and finally a study of conservativity of expansions. This book will be primarily of interest to researchers working in algebraic and non-classical logic.

Reasoning in Quantum Theory Anchor
"Is quantum logic really logic?" This book argues for a positive answer to this question once and for all. There are many quantum logics and their structures are delightfully varied. The most radical aspect of quantum reasoning is reflected in unsharp quantum logics, a special heterodox branch of fuzzy thinking. For the first time, the whole story of Quantum Logic is told; from its beginnings to the most recent logical investigations of various types of quantum phenomena,

including quantum computation. Reasoning in Quantum Theory is designed for logicians, yet amenable to advanced graduate students and researchers of other disciplines.

This volume brings together generous selections from his major texts: Time and Free Will, Matter and Memory, Creative Evolution, Mind-Energy, The Creative Mind, The Two Sources of Morality and Religion and Laughter. In addition it features material from the Melanges never before translated in English, such as the correspondence between Bergson and William James. The volume will be an excellent textbook for pedagogic purposes and a helpful source book for philosophers working across the analytic/continental divide.

At the level of developing a progressive and critical theoretical understanding of unsustainability, it argues for the importance of integrating vulnerability, which has been largely neglected by both mainstream western political theory and analyses of the current global ecological crisis. It suggests that valuable insights into the causes of and alternatives to unsustainability can be found in a critical embracing of human vulnerability and dependency as both constitutive and ineliminable aspects of what it means to be human. Rather than seeing invulnerability as the appropriate response, the book defends resilience, and the ability to 'cope with' rather than 'solve' vulnerability, as more productive.

This book offers a unique opportunity to understand the essence of one of the great thinkers of western civilization. A guided reading of Euclid's Elements leads to a critical discussion and rigorous modern treatment of Euclid's geometry and its more recent descendants, with complete proofs. Topics include the introduction of coordinates, the theory of area, history of the parallel postulate, the various non-Euclidean geometries, and the regular and semi-regular polyhedra.

Features an introductory essay by Jack Womack! Welcome to the worlds of Charles Fort, chronicler of the odd, the weird, the strange, the unexpected, and the inexplicable. In words at times as beautiful as anything ever written in English, Fort reveals the marvels of an age, questions the nature of what we think we know for certain, and provides the reader with leads on how not to be fooled by shaggy dog stories. Here you'll find rains of the unexpected, fish, snakes, and other items from the _super-Sargasso seaÓ of the unexplained that circles the Earth. Here are accounts of UFOs, accounts of odd animals seen at sea or on land, mysterious attacks by what appear to have been animals, mysterious appearances of things and people in places they could not be. Here Fort's epic account of spontaneous combustion, lights in the sky, poltergeists, unseen. murderous wild animals, mysterious disappearances, manifestations of psychotic mania, speaking in tongues^{3/4}and, of course, the cow that gave birth to two lambs. All of this Fortean wonder is prefaced by a magnificent new introductory essay by Jack Womack, winner of the Philip K. Dick Award and lifetime Fortean. Integrated Science: Science without Borders" is the first volume of the INTEGRATED SCIENCE Book series, aiming to publish the results of the most updated ideas and reviews in transdisciplinary fields and to highlight the integration of discrete disciplines, including formal sciences, physical-chemical sciences and engineering, biological sciences, medical sciences, and social sciences. This volume primarily focuses on the research involving the integration of two or more academic fields offering an innovative, borderless view, which is one of the main focuses of the Universal Scientific Education and Research Network (USERN). The whole world is suffering from complex problems; these are borderless problems; thus, a borderless solution could merely solve such complex issues. Transdisciplinarity is a domain, that researchers work jointly, using a shared conceptual framework, drawing together disciplinary-specific theories, concepts, and approaches to address common problems. Lack of confidence, lack of expertise, complexities of

healthcare, the confusing nature of healthcare environments, and lack of organization and standardization are the obstacles of successful scientific communication. Consequently, this book provides an overview of the essential elements of transdisciplinary studies and integrated science. The unique aspect of this book -privileging it from other books- is covering all aspects of science as harmonies of a single symphony.

An Inquiry Into the Original of Our Ideas of Beauty and Virtue

This book draws on ancient Egyptian inscriptions in order to theorize the relationship between accounting and order. It focuses especially on the performative power of accounting in producing and sustaining order in society. It explores how accounting intervened in various domains of the ancient Egyptian world: the cosmos; life on earth (offerings to the gods; taxation; transportation; redistribution for palace dependants; mining activities; work organization; baking and brewing; private estates and the household; and private transactions in semi-barter exchange); and the cult of the dead. The book emphasizes several possibilities through which accounting can be theorized over and above strands of theorizing that have already been explored in detail previously. These additional possibilities theorize accounting as a performative ritual; myth; a sign system; a signifier; a time ordering device; a spatial ordering device; violence; and as an archive and a cultural memory. Each of these themes are summarized with further suggestions as to how theorizing might be pursued in future research in the final chapter of the book. This book is of particular relevance to all accounting students and researchers concerned with theorize accounting and also with the relevance of history to the project of contemporary theorizing of accounting.
