Active Calculus - single variable is a free, open-source calculus text that is designed to support an active learning approach in the standard first two semesters of calculus, including approximately 200 activities and 500 exercises. In the HTML version, more than 250 of the exercises are available as interactive WeBWorK exercises; students will love that the online version even looks

great on a smart phone. Each section of Active Calculus has at least 4 in-class activities to engage students in active learning.

Normally, each section has a brief introduction together with a preview activity, followed by a mix of exposition and several more activities. Each section concludes with a short summary and exercises; the non-WeBWorK exercises are typically involved and challenging. More information on the goals and structure of the text can be found in the preface.

In SELF-EVIDENT ASTROLOGY (TM) the planets mean what they are and are what they mean. It is this simple. All we need to understand astrology is to look into the nature of the solar system and sky around us. This book shows that the physical arrangement of the solar

system, the orbital positions, the inclinations of orbital planes and things such as the mere size of a planet lead to a natural meaning for each planet. Jeffrey Sayer Close has been an amateur astrologer for 40 years and the Director of the Astrological Bureau of Ideas ([www.aboi.com](http://www.aboi.com)) for the past 12 years. He has a B.A. in physics and a M.A. in telecommunications. He has designed telecommunications network for over 25 corporations and built his own successful telecom software company. He has often been quoted and written about in

the trade press. He has also made guest appearances on Andrea Klim's "Turn To The Stars" TV show in Manchester, NH. Mr. Close has taken his background in science, his experience in complex networks and long experience in astrology and found new, more basic fundamentals of astrology. These fundamentals have incorporated in his innovative astrological software, INTREPID.
