badland management in India and some surrounding regions. It examines the processes operating in the headwaters and main channels of ephemeral rivers in lateritic environments of India. In particular, the book covers a range of vital topics in the areas of gully erosion and water to soil erosion at lateritic uplands regions of India and other regions in Asia. It explores the probable gully erosion modeling through Remote Sensing & GIS Techniques. It is divided into three

units. Unit I deals with the introduction of badland, types of badland and the process of badland formation. Unit II is devoted to a description of quantitative measurements. Unit III deals with the control and management processes related to various issues from different regions. As such this book serves as a reference book for research activities in this area. It is an efficient guide for aspiring researchers in applied geography, explaining advanced

techniques to help students recognize both simple and complex concepts. Progress of Education in India CRC Press

Any growing discipline continuously adds to the corpus of factual knowledge about the phenomena being studied and enriches its conceptual apparatus. Over time, some themes are dropped, and new concerns incorporated. This makes older and classical texts less relevant, and necessitates a process of selection and reprioritization of themes

to meet changing times. Hence the need for new textbooks, especially one as detailed and concise as *Sociology: A Study of the Social Sphere*. The book serves as an invitation to sociology and it helps the reader to learn the language that sociologists employ, and the way commonly used words (such as family, marriage, caste) are

given distinct definitions. It follows the logic of scientific research that governs sociological analysis. The various topics covered in the book are illustrated with examples taken from everyday life, and from studies conducted in India. *Bulletin Geographical Review of India*, *The Green Guide to Environmental Courses and Careers (Green Career)* Part of the *Critical Perspectives on Work and Employment* series, this edited

collection brings together contributions from leading international scholars to initiate an important dialogue between labour process analysis and scholarship on work in the Global South. This book characterises the forms of work and labour process that characterise globalising capitalism today and addresses core analytical concerns within Labour Process Theory and research on work in the South. It explores how a wide range of production relations in the Global South, ranging from formal to informal employment and self-employment, are embedded in wider social relations of gender, caste, religion and ethnicity, and are related to wider patterns of

commodification and resistance. Drawing on cutting-edge research, the book's chapters consider a diverse range of working situations, covering migrant workers in the Middle East, commercial surrogacy work in India and cooperative garment workers in Argentina. In offering a novel reading of the political economy of work in the Global South and shedding light on lesser-considered fields of work and worker organization, this volume will provide new insights for making sense of the changing world of work for students, scholars, labour activists and practitioners alike. Environment, Population, and Development The Energy and Resources Institute (TERI) This book charts the developments in the discipline of geography from the 1950s to the 1980s, examining how geography now connects with urban, regional and national planning, and impacts on areas such as medicine, transport, agricultural development and electoral reform. The book also discusses how technical and theoretical advancements have generated a renewed sense of philosophic reflection – a concern closely linked with the critical

examination and development of social theory. Handbook of Universities Rudra Publications The wide range of challenges in studying Earth system dynamics due to uncertainties in climate change and complex interference from human activities is creating difficulties in managing land and water resources and ensuring their sustainable use. Mapping, Monitoring, and Modeling Land and Water Resources brings together real-world

case studies accurately surveyed and assessed through spatial modeling. The book focuses on the effectiveness of combining remote sensing, geographic information systems, and R. The use of open source software for different spatial modeling cases in various fields, along with the use of remote sensing and geographic information systems, will aid researchers, students, and practitioners to understand better the phenomena and the predictions by future analyses for problem-solving and decision-making.
