Eureka Math is a comprehensive, content-rich PreK–12 curriculum that follows the focus and coherence of the Common Core State Standards in Mathematics (CCSSM) and carefully sequences the mathematical progressions into expertly crafted instructional modules. The companion Study Guides to Eureka Math gather the key components of the curriculum for each grade into a single location, unpacking the standards in detail so that both users and non-users of Eureka Math can benefit equally from the content presented. Each of the Eureka Math Curriculum Study Guides includes narratives that provide educators with an overview of what students should be learning throughout the year, information on alignment to the instructional shifts and the standards, design of curricular components, approaches to differentiated instruction, and descriptions of mathematical models. The Study Guides can serve as either a self-study professional development resource or as the basis for a deep group study of the standards for a particular grade. For teachers who are new to the classroom or the standards, the Study Guides introduce them not only to Eureka Math but also to the content of the grade level in a way they will find manageable and useful. Teachers familiar with the Eureka Math curriculum will also find this resource valuable as it allows for a meaningful study of the grade level content in a way that highlights the coherence between modules and topics. The Study Guides allow teachers to obtain a firm grasp on what it is that students should master during the year. The Eureka Math Curriculum Study Guide, Grade 1 provides an overview of all of the Grade 1 modules, including Sums and Differences to 10; Introduction to Place Value Through Addition and Subtraction Within 20; Ordering and Comparing Length Measurements as Numbers; Place Value, Comparison, Addition and Subtraction to 40; Identifying, Composing, and Partitioning Shapes; and Place Value, Comparison, Addition and Subtraction to 100.

As stated in the Education Commission of the States (ECS) website, the graduation requirements shown are the minimum course requirements, however, local boards may adopt graduation requirements above and beyond those authorized by the state. In the state of California, a student must complete two units of math while in high school, grades 9-12, and must meet or exceed the Algebra 1 course. If the student met the requirement of Algebra 1 before high school, two years of math are still required, excluding Algebra 1 (ECS, 2007). Algebra is very important for all children to take in their educational career and is also a high school graduation requirement in California. The students are also learning problem solving strategies and applying algebra to solving real world situations. Researchers and teachers have investigated many strategies of effective studying in an effort to improve student assessment scores. Research by Duncan (2007) found that individual students will perform slightly better on exams if they prepare reference notes to use for their exams. The effect of making and using a note card during quizzes, however, has not been explored in high school Algebra 1 classes. Data was collected and pooled from students in two high school algebra 1 classes whom currently attend a suburban public high school located in Northern California. This mixed methods study occurred over the course of one algebra 1 unit, which consisted of two quizzes and one unit test. The experimental group consisted of one algebra 1 high school class that was allowed to use one 3" x 5" note card on each quiz, but not the test. The control group consisted of another algebra 1 high school class that were not allowed any use of a note card. There was a pre-test, two quizzes, end of unit

test (post-test), and finally a post-post-test that was given after a couple of weeks to see if they retained the information. There was also a survey that included open-ended questions, provided qualitative data, and was conducted using pre-test and post-test. Although the results of this research did suggest that the use of note cards was significantly related to achievement for one specific subgroup and not the whole sample, a teacher may want to consider adopting the idea of making and using note cards on specific assessments at a students' early stage of education, so they become familiar with the process prior to high school. Students can be taught the strategy of thinking about what is known and unknown and how using a note card to quantify critical information may be helpful to learning the material.

Integrated Math, Course 1, Student Edition Simon and Schuster Middle school math placement and progression are topics that are part of an active policy and practice discussion in California and elsewhere. Beginning in the 2008/09 school year, California's State Board of Education recommended that students complete algebra I by the end of grade 8. Between 2003 and 2009 the proportion of grade 8 students taking algebra I rose from 32 percent to 54 percent (Williams et al., 2011). This increase resulted in a larger percentage of grade 8 students scoring "proficient" or "advanced" (achieving proficiency) on the algebra I California Standards Test (CST; see box 1 for definitions of key terms used in this report) and in a larger number of grade 8 students scoring "far below basic" or "below basic" on the test (Williams et al., 2011). Recent studies show that enrolling in algebra I in grade 8 works well for some students but backfires for others. The consequences of misplacement are most pronounced for students with weaknesses in key foundational areas that support algebra readiness, which frequently translates into difficulty reaching proficiency in higher level math in high school (Finkelstein et al., 2012). One study of California students concludes that placing all grade 8 students in algebra I, regardless of their preparation, sets up many students to fail (Williams et al., 2011). Recent longitudinal analysis of California statewide assessment data suggests that students who do not take algebra I in grade 8 but are successful in general math have a better chance of succeeding in algebra I when they wait until grade 9 (Liang, Heckman, & Abedi, 2012). Tables and figures are appended.

The Eureka Math curriculum provides detailed daily lessons and assessments to support teachers in integrating the Common Core State Standards for Mathematics (CCSSM) into their instruction. The companion guides to Eureka Math gather the key components of the curriculum for each grade into a single location. Both users and non-users of Eureka Math can benefit equally from the content presented. The CCSSM require careful study. A thorough study of the Guidebooks is a professional development experience in itself as users come to better understand the standards and the associated content. Each book includes narratives that provide educators with an overview of what students learn throughout the year, information on alignment to the instructional shifts and the standards, design of curricular components, and descriptions of mathematical models. The Guidebooks can serve as either a self-study professional development resource or as the basis for a deep group study of the standards for a particular grade. For teachers who are either brand new to the classroom or to the Eureka Math curriculum, the Grade Level Guidebooks introduce them not only to Eureka Math but also to the content of the grade level in a way they will find manageable and useful. Teachers already familiar with the curriculum will also find this resource valuable as it allows for a meaningful study of the grade level content in a way that highlights the coherence between modules and topics. The Guidebooks allow teachers to obtain a firm grasp on what it is that students should master during the year.

"The purpose of this study was to discover what teaching strategies were utilized by Special Day Class (SDC) teachers to prepare their 9-12 grade students to pass a course in Algebra 1 and the mathematics section of the California High School Exit Exam (CAHSEE). This study used a mixed methodology involving a quantitative survey and qualitative data gathering that included open-ended interview questions, individual in-depth interviews, and document analysis. The primary research question was: What curriculum materials and instructional strategies are used by SDC teachers--particularly highly successful SDC teachers--to prepare students to pass Algebra 1 and the mathematics section of the CAHSEE? The supplementary research questions focusing this study were: (1) To what extent are SDC teachers using direct instruction to prepare students to pass Algebra 1 and the

mathematics section of the CAHSEE? (2) To what extent are SDC teachers using differentiated instruction to prepare students to pass Algebra 1 and the CAHSEE? The research methodology was a mixed-methods design. The quantitative aspect of the study consisted of items on a questionnaire administered to the SDC teacher population in two unified school districts in a Northern California county. The qualitative data for this research consisted of two open-ended questions from the questionnaire, interviews with three successful SDC teachers, an observation of each teacher, a follow-up interview with each teacher, and document analysis. In summation, the majority of respondents to the questionnaire stated they used direct instruction as the primary teaching strategy to help SDC students pass a course of Algebra 1. The qualitative data showed that all three focus teachers used a step-by-step method to teach their students how to identify and solve different types of linear equations. In addition, all three teachers provided daily reinforcement of prior math skills, reinforcing new math skills, along with weekly assessments. " -- Abstract, p. 1.
