This volume offers the most comprehensive and wide-ranging

treatment available today of the Uralic language family, a group of languages spoken in northern Eurasia. While there is a long history of research into these languages, much of it has been conducted within several disparate national traditions; studies of certain languages and topics are somewhat limited and in many cases outdated. The Oxford Guide to the Uralic Languages brings together leading scholars and junior researchers to offer a comprehensive and up-to-date account of the internal relations and diversity of the Uralic language family, including the outlines of its historical development, and the contacts between Uralic and other languages of Eurasia. The book is divided into three parts. Part I presents the origins and development of the Uralic languages: the initial chapters examine reconstructed Proto-Uralic and its divergence, while later

chapters provide surveys of the history and codification of the three Uralic nation-state languages (Hungarian, Finnish, and Estonian) and the Uralic minority languages from Baltic Europe to Siberia. This part also explores questions of endangerment, revitalization, and language policy. The chapters in Part II offer individual structural overviews of the Uralic languages, including a number of understudied minority languages for which no detailed description in English has previously been available. The final part of the book provides cross-Uralic comparative and typological case studies of a range of issues in phonology, morphology, syntax, and the lexicon. The chapters explore a number of topics, such as information structure and clause combining, that have traditionally received very little attention in Uralic studies. The volume will be an

essential reference for students and researchers specializing in the Uralic languages and for typologists and comparative linguists more broadly. Congressional Record Springer
The tools provided here, including a Strategic Organizational Planning Process (SOPP) model, can be used to foster a dynamic change in how staffs are trained, developed, managed, and led. The results of successfully implementing these changes include productivity gains without additional capital expenditures, a more satisfied workforce, lower turnover costs, and a more effective relationship between management and staff. In today's organizations, staffs are undervalued, misdirected, misunderstood, disrespected, and undereducated businesspeople.

They are often ignorant of what their true role in the organization should be. They are valued for their specialized knowledge, but are rarely seen by senior management as major contributors to the bottom line. For this reason, staffs are ripe targets for reorganization, reengineering, or reduction, with little or no consideration of consequences other than the immediate impact on corporate profits. Whose fault is this situation? Is it merely a product of poor organizational design, or ineffective strategic planning? There exists a significant gulf in the understanding of staffs' roles in furthering organizational success on the part of all parties: line management, staff management,

and the staff members themselves. Yet while the blame can be widely shared, only an effective staff manager can change the situation for the better.
