” Denis Johnson seems to be the abiding spirit of the novel, which achieves the incendiary strangeness of his prose . . . Bible offers us a remarkable vision of adolescence as not just a time of extreme exposure but one of visionary longing. ” — THE NEW YORK TIMES After an adolescent prank leads to a stranger ’ s death, Alvis Maloney rambles westward. He lands in a small North Carolina town and falls in love—in love with his neighbor Molly, with a lonesome quarterback called Miles, with a whole community of enduring misfits and losers. But at the same time, another life takes shape in Maloney ’ s dreamlike visions: a horse named Forever, a princess with hypochondria, and an electric city that ’ s always just out of reach. As these two promises of home fight for their hold on Maloney, the story careens toward disaster, and in the end Maloney must choose between love and redemption. From the author Electric Literature called “ one of the most interesting and exciting new novelists in years, ” Michael Bible ’ s Empire of Light blooms with mystical imagination and a hopeful heart.

Drs. Leonard Scinto and Kirk Daffner provide a comprehensive survey of new diagnostic approaches to Alzheimer's disease. The authoritative contributors critically survey the most promising current research on early diagnostic markers for Alzheimer's disease, including the elucidation of changes in the brain revealed by structural and functional neuroimaging, as well as the characteristic patterns of cognitive decline that are documented by sensitive neuropsychological tests, various genetic markers, and biological assays. Early Diagnosis of Alzheimer's Disease illuminates the complex issues surrounding the search for early markers of

this increasingly widespread disease. It will establish a new standard reference guide for all those working with Alzheimer's patients.

Evolutionary biologists and neurologists may find some clues in this book to aid their research.

Keeping open house Bloodaxe Books Quantitative MRI of the Spinal Cord is the first book focused on quantitative MRI techniques with specific application to the human spinal cord. This work includes coverage of diffusion-weighted imaging, magnetization transfer imaging, relaxometry, functional MRI, and spectroscopy. Although these methods have been successfully used in the brain for the past 20 years, their application in the spinal cord remains problematic due to important acquisition challenges (such as small cross-sectional size, motion, and susceptibility artifacts). To date, there is no consensus on how to apply these techniques; this book reviews and synthesizes state-of-the-art methods so users can successfully apply them to the spinal cord. Quantitative MRI of the Spinal Cord introduces the theory behind each quantitative technique, reviews each theory ’ s applications in the human

spinal cord and describes its pros and cons, and suggests a simple protocol for applying each quantitative technique to the spinal cord. Chapters authored by international experts in the field of MRI of the spinal cord Contains “ cooking recipes —examples of imaging parameters for each quantitative technique—designed to aid researchers and clinicians in using them in practice Ideal for clinical settings

A traditional view of the Autonomic Nervous System (ANS) considers only its peripheral part: the sympathetic and parasympathetic systems. However, this view misses to consider the most important ANS function: the maintenance of homeostasis. This term is used today to define not only the strategies that allow the body proper response to changes in the environment (reactive homeostasis), but also temporal mechanisms that allow the body to predict the most likely timing of environmental stimuli (predictive homeostasis based on biological rhythms). This book discusses the ANS from both an enlarged and a timed perspective. First, it presents how the organization of the ANS is hierarchical into different levels. Following that, the book discusses how the ANS changes functionally in the three-body configurations (wakefulness, slow sleep, rapid eye movement sleep) found in a 24-hour cycle. Finally, the most important clinical implications of this enlarged and timed vision of ANS will be discussed. Autonomic Nervous System – Basic and Clinical Aspects is a comprehensive text intended for medical students and health professionals who are interested in a deeper approach to this important part of the nervous system. It provides a detailed and complete understanding of the neuroscience behind the ANS, allowing a proper clinical applicability of this knowledge.

Extraordinary Powers. She wants vengeance. He wants justice. The Renegades are a syndicate of prodigies—humans with extraordinary abilities—who emerged from the ruins of a crumbled society and established peace and order where chaos reigned. As champions of justice, they remain a symbol of hope and courage to everyone...except the villains they once overthrew. Nova has a reason to hate the Renegades, and she is on a mission for vengeance. As she gets closer to her target, she meets Adrian, a Renegade boy who believes in justice—and in Nova. But Nova's allegiance is to the villains who have the power to end them both.

Pamela Gillilan was born in London in 1918, married in 1948 and moved to Cornwall in 1951. When she sat down to write her poem Come Away after the death of her

husband David, she had written no poems for a quarter of a century. Then came a sequence of incredibly moving elegies. Other poems followed, and two years after starting to write again, she won the Cheltenham Festival poetry competition. Her first collection That Winter (Bloodaxe, 1986) was shortlisted for the Commonwealth Poetry Prize.

This book is the first of its kind entirely dedicated to carbohydrate vaccines written by renowned scientists with expertise in carbohydrate chemistry and immunochemistry. It covers the synthesis of carbohydrate antigens related to bacteria and parasites such as: *Haemophilus influenzae*, *Streptococcus pneumoniae*, *Shigella flexneri*, *Candida albicans*, *Mycobacterium tuberculosis*, and *Chlamydia*. The first three chapters are of wide interest as they cover fundamental concerns in new vaccine developments. The first one presents the immune system and how carbohydrate antigens are processed before protective antibodies are produced. It also illustrates antigen presentation in the context of major histocompatibility complexes (MHCs). The second chapter describes regulatory issues when carbohydrate vaccines are involved while the third one discusses several techniques used in conjugation chemistry and the implication of certain chemical linkages that may induce unexpected anti-linker antibodies. This section will be particularly appealing for those involved in drug-conjugate design, pro-drug developments, and drug vectorization. The book concludes with one chapter that illustrates the principle through which peptide antigens can functionally mimic carbohydrate epitopes, thus, unraveling the potential for peptide surrogates as replacement for complex carbohydrate structures. This book is unique in that it covers all aspects related to carbohydrate vaccines including the success story with the first semi-synthetic bacterial polysaccharide vaccine against *Haemophilus influenzae* type b responsible for pneumonia and meningitis, liable for more than 600,000 infant deaths worldwide in developing countries. The book also presents regulatory issues and will thus be vital for government agencies approving candidate vaccines. It widely covers synthetic methodologies for the attachment of carbohydrate antigens to peptides and immunogenic protein carriers. Vaccines against bacterial antigens, cancer, and parasites are also discussed by worldwide experts in this field in details. No other book contains such a wide panel of different expertise.

It will also be useful to students and researchers involved with the immunology of foreign antigens and how the under appreciated carbohydrate antigens are processed by the immune system.

NEW YORK TIMES BEST SELLER • A poignant and hilarious memoir from the cultural icon, gay rights activist, and four-time Tony Award-winning actor and playwright, revealing never-before-told stories of his personal struggles and conflict, of sex and romance, and of his fabled career Harvey Fierstein ' s legendary career has transported him from community theater in Brooklyn, to the lights of Broadway, to the absurd excesses of Hollywood and back. He ' s received accolades and awards for acting in and/or writing an incredible string of hit plays, films, and TV shows: Hairspray, Fiddler on the Roof, Mrs. Doubtfire, Independence Day, Cheers, La Cage Aux Folles, Torch Song Trilogy, Newsies, and Kinky Boots. While he has never shied away from the spotlight, Mr. Fierstein says that even those closest to him have never heard most of the tales—of personal struggles and conflict, of sex and romance, of his fabled career—revealed in these wildly entertaining pages. I Was Better Last Night bares the inner life of this eccentric nonconforming child from his roots in 1952 Brooklyn, to the experimental worlds of Andy Warhol and the Theatre of the Ridiculous, to the gay rights movements of the seventies and the tumultuous AIDS crisis of the eighties, through decades of addiction, despair, and ultimate triumph. Mr. Fierstein ' s candid recollections provide a rich window into downtown New York City

life, gay culture, and the evolution of theater (of which he has been a defining figure), as well as a moving account of his family's journey of acceptance. *I Was Better Last Night* is filled with wisdom gained, mistakes made, and stories that come together to describe an astonishingly colorful and meaningful life. Lucky for us all, his unique and recognizable voice is as engaging, outrageously funny, and vulnerable on the page.

*Trouble Boys* is the first definitive, no-holds-barred biography of one of the last great bands of the twentieth century: The Replacements. With full participation from reclusive singer and chief songwriter Paul Westerberg, bassist Tommy Stinson, guitarist Slim Dunlap, and the family of late band co-founder Bob Stinson, author Bob Mehr is able to tell the real story of this highly influential group, capturing their chaotic, tragic journey from the basements of Minneapolis to rock legend. Drawing on years of research and access to the band's archives at Twin/Tone Records and Warner Bros. Mehr also discovers previously unrevealed details from those in the group's inner circle, including family, managers, musical friends and collaborators.

We live in an aging world. Illnesses that are prevalent and cause significant morbidity and mortality in older people will consume an increasing share of health care resources. One such illness is depression. This illness has a particularly devastating impact in the elderly because it is often undiagnosed or inadequately treated. Depression not only has a profound impact on quality of life but it is associated with an increased risk of mortality from suicide and vascular disease. In fact for every medical illness studied, e.g. heart disease, diabetes, cancer, individuals who are depressed have a worse prognosis. Research has illuminated the

physiological and behavioral effects of depression that accounts for these poor outcomes. The deleterious relationship between depression and other illnesses has changed the concept of late-life depression from a "psychiatric disorder" that is diagnosed and treated by a psychiatrist to a common and serious disorder that is the responsibility of all physicians who care for patients over the age of 60. This is the first volume devoted to the epidemiology, phenomenology, psychobiology, treatment and consequences of late-life depression. Although much has been written about depressive disorders, the focus has been primarily on the illness as experienced in younger adults. The effects of aging on the brain, the physiological and behavioral consequences of recurrent depression, and the impact of other diseases common in the elderly, make late-life depression a distinct entity. There is a compelling need for a separate research program, specialized treatments, and a book dedicated to this disorder. This book will be invaluable to psychiatrists, gerontologists, clinical psychologists, social workers, students, trainees, and others who care for individuals over the age of sixty.

When Barack Obama won the 2008 presidential election, he also won a long-running debate with his wife Michelle. Contrary to her fears, politics now seemed like a worthwhile, even noble pursuit. Together they planned a White House life that would be as normal and sane as possible. Then they moved in. In the Obamas, Jodi Kantor takes us deep inside the White House as they try to grapple with their new roles, change the country, raise children, maintain friendships, and figure out what it means to be the first black President and First Lady. Filled with riveting detail and insight into their partnership, emotions and personalities, and written with a keen eye for the ironies of public life, *The Obamas* is an intimate portrait that will surprise even readers who thought they knew the President and First Lady. Digitisation is creating an entirely new and wonderfully inter-connected world. This fundamental and forthcoming transformation necessitates and makes possible utterly original understandings, approaches, arrangements and aspirations. However, while sectors such as communication, banking, entertainment, defence, information, retail and security have been radically restructured by digitisation, the

applications of ICT in education have been characterised by four decades of disappointment, disillusionment and frustration. Clearly, isolated and piecemeal digital innovations can achieve little of value within twentieth century schools and archaic educational systems. Given that we are in a time of unparalleled challenges and opportunities, One World One School recognises that, as our starting-point, we must agree upon a fresh comprehension of what education is really for in the third millennium and beyond. Mike Douse and Philip Uys affirm that it needs to be totally restructured with digitisation as the cohesive force. Moreover, the novel Coronavirus/COVID-19 pandemic (appearing as this book was on the point of completion) necessitates an immediate and inspirational online educational response which may well pave the way towards that fundamental transformation. Education's substance, practice and consequences may now become much more equitable, ethical and enjoyable (and far less competitive, test-oriented and world-of-work-dominated). Billions of learners are yearning for education. Instead, nine-tenths of them are fobbed off with job preparation - and discriminatory job preparation at that. Just as there is now, virtually, just the one global library, so also we are moving towards the worldwide universal school, consigning contemporary educational arrangements (including competitive examinations, imposed curricula, indoctrination and propaganda, the reproduction of inequality and the demeaning power of PISA) to the rubbish bin of history. As delineated in One World One School, the primary phase is the time of preparation - enjoyable and stimulating years aimed at enabling each child to become ready for self-directed learning. From then onwards, throughout life, the curriculum may and must be learner driven (rather than designed externally from and directed at learners as victims) embodying a convivial learning-supporting pedagogy, with teachers playing (dramatically altered, more professionally fulfilling and essentially responsive) concierges of learning and escorts to wisdom roles. The Digital Age creates the universal consciousness embodying the tangible/digital duality that characterises these petrifyingly exciting times. These coming COVID19 months offer an opportunity to invest substantially in effective and enjoyable online education for all. Digitisation involves a pivotal leap in human potential as profound as the wheel in terms of development, as significant as the book in relation to information, and as iconoclastic as anything dreamed up by the deepest analyst/therapist in terms of the human psyche. Nothing - educationally - will ever be the same again [just as nothing - economically and socially - will ever be

the same post-pandemic] and all of this is thoughtfully and entertainingly explored in One World One School.
