Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

In 900 text pages, Campbell Biology in Focus emphasizes the essential content and scientific skills needed for success in the college introductory course for biology majors. Each unit streamlines content to best fit the needs of instructors and students, based on surveys, curriculum initiatives, reviews, discussions with hundreds of biology professors, and careful analyses of course syllabi. Every chapter includes a Scientific Skills Exercise that builds skills in graphing, interpreting data, experimental design, and math--skills biology majors need in order to succeed in their upper-level courses. This briefer book upholds the Campbell hallmark standards of accuracy, clarity, and pedagogical innovation.

For non-majors/mixed biology courses. Build a flexible non-majors biology course with science literacy at its core. Eric Simon's Biology: The Core combines a succinct, beautifully illustrated 12-chapter textbook with engaging MasteringBiology assignment options and extensive instructor support materials. The Core delivers a uniquely flexible teaching and learning package that supports Active Learning or "Flipped Classroom" teaching techniques, and an emphasis on current issues that relate to basic biological concepts. The modular organization of the text makes it easy for instructors to teach concepts in their preferred order, and powerful online assignment options reinforce those concepts by clarifying the "big picture" and preparing your students with the biological literacy skills required to make informed decisions outside the classroom. The Second Edition text and MasteringBiology assignment options further revolutionize teaching in and out of the classroom with a greater emphasis on the nature of science and dozens of new opportunities for students to practice basic science literacy skills. The Core's concise modules continue to focus students' attention on the most important concepts, combining dynamic figures and illustrations with supporting narrative as the primary source of instruction to create a more engaging and accessible learning experience for students. The new edition has been revised to strengthen the ways the text, MasteringBiology, and the instructor support materials work together in meeting the needs of both instructors and students--before, during, and after class. Also available with MasteringBiology (tm) MasteringBiology is an online homework, tutorial, and assessment product proven to improve results by helping students quickly master concepts. Students benefit from opportunities to practice basic science literacy skills, using interactive resources that create engaging learning experiences. Effective activities in MasteringBiology help students further visualize and understand complex biological processes. Comprehensive instructor tools include MasteringBiology assignment options. This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. Social Studies for the Preschool/Primary Child, 9/e, written by respected authors Sharon Castle and Renee C. Falconer, and begun by the late Carol Seefeldt, remains one of the most popularly read texts on teaching social studies to young children. Filled with a multitude of ideas, suggestions, and activities that prospective early childhood teachers can use to interest young children in social studies, the practicality and applicability of this resource is proven. Not only will novice teachers learn the content and methods of teaching social studies, but also they will be given sound ways to integrate social studies in other areas of the curriculum, including science, the arts, literacy and literature, and mathematics. The importance of understanding and using child development knowledge is a focus throughout the book. It includes a full chapter on play as a crucial part of children's learning and development, and incorporates ideas for play throughout the material. Revised with the most current

research, topics, and more, the book includes three extensively revised chapters to offer all of the 10 NCSS Thematic Strands; a new emphasis on the use of such technology as e-mail, digital cameras, and the World Wide Web; and thoroughly incorporates the current NAEYC standards for quality, curriculum, and professional preparation.

Handbook of Aging and the Social Sciences, Seventh Edition, provides extensive reviews and critical evaluations of research on the social aspects of aging. It also makes available major references and identifies high-priority topics for future research. The book is organized into four parts. Part 1 reviews developments in the field of age and the life course (ALC) studies and presents guidelines on conducting cohort analysis. Part 2 covers the demographic aspects of aging; longevity trends; disability and aging; and stratification and inequality research. Part 3 includes chapters that examine socioeconomic position and racial/ethnic disparities in health at older ages; the role of social factors in the distribution, antecedents, and consequences of depression; and aspects of private wealth transfers and the changing nature of family gift-giving. Part 4 deals with pension reform in Europe; the political activities of older Americans; the future of retirement security; and gender differences in old age. The Handbook is intended for researchers, professional practitioners, and students in the field of aging. It can also serve as a basic reference tool for scholars, professionals, and others who are not presently engaged in research and practice directly focused on aging and the aged. Contains all the main areas of social science gerontological research in one volume Begins with a section on theory and methods Edited by one of the fathers of gerontology (Binstock) and contributors represent top scholars in gerontology

For courses in Writing Across the Curriculum or Writing About Biology. Developing the tools to effectively write about biology Teaching biology and strong writing skills simultaneously is a challenge, especially when students exhibit a range of abilities. The Ninth Edition of A Short Guide to Writing about Biology provides tools to strengthen student writing and reinforce critical thinking. Written by a prominent biologist, this best-selling guide teaches students to express ideas clearly and concisely. It emphasizes writing as a way of examining, evaluating, and refining ideas: students learn to read critically, study, evaluate and report data, and communicate with clarity. Using a narrative style, the text is its own example of good analytical writing. In this new edition, students learn how to avoid plagiarism (Ch 1 and 3), read and interpret data (Ch 3, 4 and 9), prepare effective Materials and Methods sections in research reports and more (Ch 9), and prepare manuscripts for submission (Ch 9). The text also provides advice on locating useful sources (Ch 2), maintaining laboratory and field notebooks (Ch 9), communicating with different audiences (Ch 6 and 10), and crafting research proposals (Ch 10), poster presentations (Ch 11), and letters of application (Ch 12). Also available with MyWritingLab(tm) This title is also available with MyWritingLab -- an online homework, tutorial, and assessment program that provides engaging experiences for teaching and learning. Flexible and easily customizable, MyWritingLab helps improve students' writing through context-based learning. Whether through self-study or instructor-led learning, MyWritingLab supports and complements course work.

Biology, an authoritative text with a diverse author team, focuses on the process of evolution to explain biodiversity. The book emphasizes problem-solving and the scientific method in its approach to cutting-edge content. The use of historical and

experimental approaches offers students not only a current view of the field, but more importantly, how it evolved. The authors have tried to keep as much historical context as possible and provide information within an experimental framework throughout the text.

**Research Methods in Psychology** OUP Oxford

For all the discussion in the media about creationism and 'Intelligent Design', virtually nothing has been said about the evidence in question - the evidence for evolution by natural selection. Yet, as this succinct and important book shows, that evidence is vast, varied, and magnificent, and drawn from many disparate fields of science. The very latest research is uncovering a stream of evidence revealing evolution in action - from the actual observation of a species splitting into two, to new fossil discoveries, to the deciphering of the evidence stored in our genome. Why Evolution is True weaves together the many threads of modern work in genetics, palaeontology, geology, molecular biology, anatomy, and development to demonstrate the 'indelible stamp' of the processes first proposed by Darwin. It is a crisp, lucid, and accessible statement that will leave no one with an open mind in any doubt about the truth of evolution.
