This book explores the international law framework governing the use of armed force in occupied territory through a rigorous analysis of the interplay between jus ad bellum, international humanitarian law, and international human rights law. Through an examination of state practice and opinio juris, treaty provisions and

relevant international and domestic case law, this book offers the first comprehensive study on this topic. This book will be relevant to scholars, practitioners, legal advisors, and students across a range of sub-disciplines of international law, as well as in peace and conflict studies, international relations, and political science. This study will influence the way in which States use armed force in occupied territory, offering guidance

and support in litigations before domestic and international courts and tribunals.

User modeling researchers
look for ways of enabling
interactive software systems
to adapt to their users-by
constructing, maintaining,
and exploiting user models,
which are representations of
properties of individual
users. User modeling has

been found to enhance the
effectiveness and/or usability
of software systems in a
wide variety of situations.

Techniques for user
modeling have been
developed and evaluated by
researchers in a number of
fields, including artificial
intelligence, education,
psychology, linguistics,
human-computer interaction,
and information science. The
biennial series of
International Conferences on
User Modeling provides a
forum in which academic
and industrial researchers
from all of these fields can

exchange their
complementary insights on
user modeling issues. The
published proceedings of
these conferences represent
a major source of
information about
developments in this area.
