Meet Alex and Bobbie, who both like to play poker. Alex is a professional poker player who plays for a living and is a solid long-term winner. Bobbie is a recreational player who plays a decent enough game but mainly wants to have a good time. If you play poker regularly you will meet thousands of players like Bobbie in your games and very few like Alex. Of course one would expect that, in the long run, Alex will perform better than Bobbie. But have you ever wondered EXACTLY what it is that Alex understands better and does differently to Bobbie? This is a rather complex question that does not have a simple answer. In this book, UCLA maths professor Duncan Palamourdas addresses this question via a journey through human psychology, game theory, easy-to-understand mathematics and even philosophy. Topics include: * Understanding the instinctive but unprofitable tendencies of inexperienced players. * How to identify what a mistake actually is in poker - and how to exploit it. * Why poker does not revolve around bluffing. * The great impact of variance in poker and how to account for it. * How to develop a consistent approach that allows

you to play like Alex and not Bobbie.

Infinite Ideas

In this book we are given a unique view of East Africa of the 1950s; not the stereotyped picture of wildlife safaris and leaping Masai, but the emerging independence struggle of a new African nation from the viewpoint of a white police officer, in an exceptionally detailed, thoroughly readable, firsthand account of a rare period of recent history. It tells how an Australian veteran, fresh from the Korean War, became a colonial police officer in Tanganyika Territory (later Tanzania after federation with the offshore islands of Zanzibar in 1964). The reader is taken on a journey which tourists

in Africa never see: from back alleys and police cells in the polyglot city of Dar es Salaam, to snake-infested camps on Uganda-Ruanda border patrols, and on police field force emergency operations from barracks at the foot of Kilimanjaro. There is much here to discover about a mostly benign semi-colonial period in Africa which lasted less than fifty years, passing, in one African's description, as briefly as a butterfly's heartbeat; where a few conscientious white administrators and their loyal African assistants managed vast regions of a desolate territory with remarkably selfless care and scarce resources; where things worked most of the time, but sometimes where chaos reigned. It is about the country itself, its ubiquitous animals and its people at close range, including villagers, criminals, hunters, witch doctors, and colonial officials, but most of all, the African askari policemen who were the author's close and often only companions.

This report presents study results and recommendation intended to illustrate the potential contributions of science and technology to crime control. The report supplements and amplifies the discussion of science and technology in the general report of the President's Commission on Law Enforcement and Administration of Justice, entitled "The Challenge of Crime in a Free Society." Two chapters address the application of technology in police apprehension of criminals. Topics considered are the use of technology to reduce police response time, means to modernize the command and control process, and how to relieve the radio frequency congestion in most large

police departments. Another chapter discusses aspects of court management, corrections, and crime prevention. The court-management discussion focuses on delay reduction in case processing. Two aspects of corrections addressed are the use of programmed instruction as a rehabilitation aid, and the use of statistical techniques to aid in correctional decisionmaking. Auto ignition redesign and street lighting are discussed as technological means to reduce crime opportunities. A chapter examines the uses of systems analysis for the study of the entire criminal justice system as an integrated whole. One chapter considers the potential role of modern information technology in the development of an integrated criminal justice information system. The final chapter outlines a program of research and development by which the Federal Government can stimulate a major infusion of science and technology into the criminal justice process and counter the broader problems of crime control.

Sam Bleakley and the surf EXPLORE team take us on a roller coaster ride through Gabon, India, Vietnam, Algeria, China and Haiti, drumming up a tropical beat. Combining 'Deep Travel', John Callahan's incredible photography and Sam's performance writing, they capture the spirit of these turbulent coast scapes, blood racing, running on salt water fuel. The wide belt around the Equator - the

tropics - has become an alluring path for travel, but a region often steeped in war and environmental disasters. Sam and surf EXPLORE go off the regular route, carving a niche, collaborating with locals, documenting the occasion poetically and with precision. Where 'waves transform from green glass to white foam, the surfboard is the frozen double of that transition - a rainbow bridge that allows you to step in the blink of an eye from inertia to adrenaline-fuelled ecstasy to the fear of the water-wrestling hold-down.' The paradoxical red hot and cool blue of surfing, and the often icy logic of preparation for challenging travel, form a matrix from which springs a distinctive kind of writing as performance. By turns, surf EXPLORE gather their wits at the cross roads where 'lovers part and souls get taken by the lost high way, lured down the wrong route.'

Beat back pain

2017 Gold Medal Winner of the International Automotive Media Competition! Uncover the captivating history of the highest-performance cars in America, illustrated with beautiful photography. The American muscle car began not in the factories of the big three automakers, but in the garages and dealerships of a hot-rod subculture bent on making the hottest, highest-performance cars on the street. The Complete Book of American Muscle Supercars catalogs these amazing cars, along with the builders who unleashed them on the American scene. From Michigan's Royal Pontiac dealership and the souped-up Royal Pontiac Bobcats they built and sold, to the new cars from such fabled names as Carroll Shelby, Mr. Norm's Grand Spaulding Dodge, Nickey Chevrolet, Don Yenko, George Hurst, Baldwin-Motion, Calloway, SLP, and Steve Saleen. This

gorgeously illustrated book chronicles the outstanding contribution of the tuner/builder to American automotive history through the amazing machines they created. From the oldest of these muscle tuners commanding top dollar at today's classic-car auctions, to the latest vehicles by Ford and Chrysler, with their SVT and SRT divisions, this book gives readers a full and fascinating look at American high-performance in its purest form.
