Good Morning Message "O'Reilly Media, Inc." The quality your customers really need inevitably differs from the

quality as prescribed in specifications, rules and regulations. The author's message is, in short, to be aware of this fact in all quality related issues. Quality as required by fitness for purpose can be in conflict with quality according to prevailing specifications, rules and regulations. It is then in the interest of the buyer to agree with the supplier on desirable exemptions. But often we can see that the supplier chooses the easy way out of just complying with the contract specifications without caring too much about the particular interests of the customer. In the Damen Shipyards Group, we try to induce a corporate culture of always paying attention to the interests of our customers and making serious efforts to serve those interests, also when there is no contractual obligation to do so. This book constitutes a welcome means to spread this word throughout the entire organisation. I wholeheartedly recommend it to whoever wishes to be a genuine quality supplier -- From publisher's provided.

In 2016, Americans fed up with the political process vented that frustration with their votes. Republicans nominated for president a wealthy businessman and former reality show host best known on the campaign trail for his sharp rhetoric against immigration and foreign trade. Democrats nearly selected a self-described socialist who ran on a populist platform against the influence of big money in politics. While it is not surprising that Americans would channel their frustrations into votes for contenders who pledge to end business as usual, the truth is that we don't have to pin our hopes for greater participation on any one candidate. All of us have a say—if we learn, master

and practice the skills of effective citizenship. One of the biggest roadblocks to participation in democracy is the perception that privileged citizens and special interests command the levers of power and that everyday Americans can't fight City Hall. That perception is undoubtedly why a 2015 Pew Charitable Trusts survey found that 74 percent of those Americans surveyed believed that most elected officials didn't care what people like them thought. Graham and Hand intend to change that conventional wisdom by showing citizens how to flex their citizenship muscles. They describe effective citizenship skills and provide tips from civic experts. Even more importantly, they offer numerous examples of everyday Americans who have used their skills to make democracy respond. The reader will see themselves in these examples of citizens who chose to be victorious participants rather than tranquil spectators in the arena of democracy. By the end of the book, you will have new confidence that citizen participation is the lifeblood of America -- and will be ready to make governments work for you, not the other way around.

Internetworking with TCP/IP, Volume III describes the fundamental concepts of client-server computing used to build all distributed

computing systems, and presents an in-depth guide to the Posix sockets standard utilized by Linux and other operating systems. Dr. Douglas E. Comer compares leading server designs, and describes the key tools and techniques used to build clients and servers, including Remote Procedure Call (RPC). The book contains examples of running programs that illustrate each approach. Comer introduces the client-server model and its software design implications; the role of concurrent processing and threads; the Socket API, and differences that impact Linux programmers. Understand the key algorithms and issues associated with client and server software design; then review three leading approaches: iterative, connectionless servers (UPD); and both iterative and concurrent connection-oriented servers (TCP). The book contains extensive coverage of threading, including a new chapter on using threads for concurrency; as well as coverage of single-threaded and multi-threaded concurrent servers. Comer introduces multi-protocol and multi-service services; reviews client concurrency; tunneling at the transport and application levels; and external data representation (XDR). He reviews RPC, distributed program generation, NFS concepts and protocol; Telnet; streaming media transport; and finally, techniques for avoiding deadlock and starvation in client-server systems. For everyone who wants to master TCP/IP and understand how the Internet works.

The "how-not-to" leadership book There is a paradox in leadership: we can only succeed by knowing failure. Every accomplished leader knows there are minefields of failures that need to be navigated in order to succeed. Wouldn't it be great to have the insights to help you prevent from making avoidable mistakes? Unfortunately, in business talking about mistakes can be taboo, and, at a certain level, learning from failure is not an option. Weinzimmer and McConoughey speak frankly about the things that are difficult to talk about – the unvarnished truths necessary to become a successful leader. Based on a groundbreaking 7-year study of what almost 1000 managers across 21 industries really think about lessons from failures Includes exclusive interview material from CEOs at a wide range of organizations, including major firms such as Caterpillar, Priceline.com, and Allstate; startups; and entrepreneurial small businesses Drills down into failure to uncover the strategies that aspiring leaders need in order to avoid the most damning leadership mistakes: unbalanced orchestration, drama management, and reckless vanity Learning from the mistakes of others is a necessary part of the journey of effective leadership, and this book offers an indispensable guide to learning these powerful lessons—without paying the price of failure.

Owner's Guide to Using Your Bible The 100 Best Business Books of All Time

The z/OS® Distributed File Service zSeries® File System (zFS) is a z/OS UNIX® file system that can be used like the Hierarchical File System (HFS). zFS file systems contain files and directories, including Access Control Lists (ACLs), that can be accessed with the z/OS HFS application programming interfaces (APIs). zFS file systems can be mounted into the z/OS UNIX hierarchy along with other local or remote file system types (for example, HFS, TFS, AUTOMNT, NFS, and so on). zFS does not replace HFS, but it is the z/OS UNIX strategic file system and IBM® recommends migrating HFS file systems to zFS. Beginning with z/OS V1R7, there are no restrictions for file system structures that should be

kept as HFS instead of zFS. This IBM Redbooks® publication helps you to install, tailor, and configure new zFS file systems. This information can be used by system administrators who work with the zFS component of the IBM z/OS Distributed File Service base element. The book provides a broad description of the new architecture of the zFS file system for all releases up to zFS V1R13. You can use it as a reference when converting HFS file systems to zFS file systems. It will help you to create a solution for migrating to zFS file systems, and to understand the performance differences between HFS file systems and zFS file systems.
