Personality Tests and Reviews II The Council Grounded in cutting-edge developmental research, this book examines what school readiness entails and how it can be improved. Compelling longitudinal findings are presented on the benefits of early intervention for preschoolers at risk due to poverty and other factors. The volume identifies the cognitive, language, behavioral, motor, and socioemotional skills that enable young children to function successfully in school contexts. It explores specific ways in which school- and family-based interventions—including programs that target reading and language, math, self-regulation, and social-emotional development—can contribute to school readiness. The book also addresses challenges in the large-scale dissemination of evidence-based practices.

How do we prepare children for a future we can't even imagine? Across Canada, a debate swirls around what our children will need to know in the face of huge technological, economic, social and political change. The question has become an ideological battleground, and there is a hunger for a deeper understanding of what we should be doing to prepare children now for the challenges of the future. This timely, important book is an answer to that call. In *Pushing the Limits*, Kelly Gallagher-Mackay and Nancy Steinhauer draw on their experiences as educational leaders to reveal that the schools of the future exist in the here and now. They introduce us to extraordinary Canadian public schools, deeply rooted in their communities, that are fostering innovators, nimble problem-solvers and engaged citizens, boosting math comprehension, cultivating creativity and using technology to broaden the parameters of learning.

And they explore why the role of schools is expanding to nurture students' social-emotional skills and growth mindsets, and how vital this broader definition of education is to children's long-term health, happiness and success. This book provides a vision of what schooling can and should look like in our rapidly shifting world and explores how we—parents and teachers—can realize this vision together.

Designed to complement the Mental Measurements Yearbooks, Tests in Print fills a pressing need for a comprehensive bibliography of all commercially available English language tests in print. Although these volumes are useful in and of themselves, their maximum usefulness requires the availability and use of the Mental Measurements Yearbooks. Although information on available tests and specific test bibliographies is valuable, the greatest service which Tests in Print can perform is to encourage test users to choose tests more wisely by consulting the MMY test reviews, test reviews from journals, and the professional literature on the construction, use, and validity of the tests being considered. Tests in Print VI contains information on over four thousand testing instruments. Informative descriptions of each test include specific data on their purpose, population, scoring, and pricing. Indexes of test titles, publishers, acronyms, and subject classifications are provided, as well as notations on out-of-print tests. Specific information about testing is required by a wide range of professionals in areas such as education, psychology, counseling, management, personnel, health care, career planning, sociology, child development, social science, and research. Tests in Print VI also serves as a comprehensive index to the Mental Measurements Yearbook series by directing readers to the appropriate volume for reviews of specific tests.

What does it mean to be literate? What does it mean to be a cognizing individual? What is the nature of cognizing? These are not new questions. They have been treated as "philosophical puzzles" to be pondered systematically in

the hope of some eventual solution. They have also been viewed as sets of "language games" with their own rules to enable the individual to understand the world. These age-old and significant issues gain renewed meaning with our advances in technology and neurosciences. Psychologists and educators would need to be aware of the explicit knowledge needed to prepare their students to be literate individuals. These were some of the questions that a small number of psychologists, educators, and computer scientists attempted to answer when they gathered for the Symposium Literacy and Cognition, which was held at the University of Saskatchewan, Saskatoon, Canada from 29th to 31st October, 1987. The occasion also marked the sixtieth anniversary of the College of Education of the University, which had as its beginning the Normal School for the Province of Saskatchewan. We are grateful to the presenters for their presentations and their written papers, and also to our other colleagues from the United States and Sweden for their contributions to the multi faceted theme of literacy and cognition. There are many other people whom we would like to thank. These include: Dr. Sylvia Fedoruk, Chancellor of the University and Lieutenant Governor of Saskatchewan, for her opening remarks at the Symposium; Dr.

Offering a historical and empirical account, this book provides a comprehensive overview of the socio-educational model of second language acquisition. This approach to understanding motivational variables that promote success in the learning of a second or foreign language - distinguishing between language classroom motivation and language learning motivation - is a major one in the history of this field of research. Chapters include a discussion of the definition and measurement of motivation; historical foundations of the model; recent studies with the International Attitude Motivation

Test Battery for English as a foreign language in different countries; the implications of the model to the classroom context; and a discussion of criticisms and misconceptions of the model. The book provides graduate students and researchers with unique coverage of this research-oriented approach as well as serving as a source book for the area. It is ideal for courses on motivation in second language learning, or as a supplemental text for research-oriented courses in applied linguistics, educational psychology, or language research in general.

A survey was undertaken to obtain information about the use of standardized tests in assessing the achievement of Canadian elementary and secondary school students. This information was garnered from the ministries or departments of education of all ten Canadian provinces and one territory, and a sample of about 120 of the local school boards in the country. The questionnaires sent to the ministries and school boards were similar, and consisted of two parts. The first part contained questions of a general nature about the province-wide testing program, if any, that had been conducted during the 1991-92 school year. The second part of the questionnaire was focused on the particular tests used in system-wide testing by province or board during any of the four academic years 1989-90 to 1992-93.

For the practicing

neuropsychologist or researcher, keeping up with the sheer number of newly published or updated tests is a challenge, as is evaluating the utility and psychometric properties of neuropsychological tests in a clinical context. The goal of the third edition of A Compendium of Neuropsychological Tests, a well-established neuropsychology reference text, is twofold. First, the Compendium is intended to serve as a guidebook that provides a comprehensive overview of the essential aspects of neuropsychological assessment practice. Second, it is intended as a comprehensive sourcebook of critical reviews of major neuropsychological assessment tools for the use by practicing clinicians and researchers. Written in a comprehensive, easy-to-read reference format, and based on exhaustive review of research literature in neuropsychology, neurology, psychology, and related disciplines, the book covers topics such as basic aspects of neuropsychological assessment as well as the theoretical background, norms, and the utility, reliability, and validity of neuropsychological tests. For this third edition, all chapters have been extensively revised and updated. The text has been considerably expanded to provide a comprehensive yet practical overview of the state of the field. Two new chapters have been added: "Psychometrics in Neuropsychological Assessment" and "Norms in Psychological Assessment." The first two chapters present basic psychometric concepts and principles. Chapters three and four consider practical aspects of the history-taking interview and the assessment process itself. Chapter five provides guidelines on report-writing and chapters six through sixteen consist of detailed, critical reviews of neuropsychological tests, and address the topics of intelligence, achievement, executive function, attention, memory, language, visual perception, somatosensory

olfactory function, mood/personality, and response bias. A unique feature is the inclusion of tables that summarize salient features of tests within each domain so that readers can easily compare measures. Additional tables within each test review summarize important features of each test, highlight aspects of each normative dataset, and provide an overview of psychometric properties. Of interest to neuropsychologists, neurologists, psychiatrists, and educational and clinical psychologists working with adults as well as pediatric populations, this volume will aid practitioners in selecting appropriate testing measures for their patients, and will provide them with the knowledge needed to make empirically supported interpretations of test results.

The Handbook of Psychoeducational Assessment is a practical guide for educational and psychological professionals using norm-referenced tests in the ability, achievement, and behavioral assessment of children. Written by key individuals involved in the construction and evolution of the most widely used tests, this book provides critical information on the nature and scope of commonly used tests, their reliability and validity, administration, scoring and interpretation, and on how the tests may differ and complement each other in their utility with specific populations. Part 1 of the Handbook of Psychoeducational Assessment focuses on ability assessment and the use of full battery intelligence tests as well as brief scales and short forms. Part 2 discusses achievement and the expanded role of psychologists in consultation with educators. Part 3 covers behavior assessment with special attention given to discussion of which tests are most suitable for assessing specific behavioral problems such as ADHD, anxiety, and depression. The final section recognizes the importance of context and person sensitive assessment practices, discussing cross-cultural assessment, neuropsychological assessment, and the usefulness of dynamic assessment for program planning and intervention delivery.
