From bombs to bombillas, Snow Nomad: An Avalanche Memoir, chronicles the fifty seasons author Alan Dennis worked in the avalanche patch, travelling between Canada, New Zealand, Scotland, and Argentina. His nomadic account is composed of “ facts, factoids, truths, half-truths, rumours, gossip, and fake news. ” This unconventional journey on an undulating career path is one riddled with wit and the wisdom he gained when plying his trade at ski resorts, in mining patches, on film sets, and beyond. It ’ s a story of mentors, mishaps, and moments of solitude. Dennis introspectively recalls the times when he was in over his head, but learned to rely on his training, intuition and, perhaps most of all, luck. Snow Nomad is a humble and heartfelt tribute to his dear family, friends, and colleagues (and sometimes even foes) with whom he shared these decades, whether shooting military artillery for avalanche control in Canada ’ s remote reaches, scrambling up a summit in the Scottish Highlands, or bunking at a mining camp in Argentina ’ s Andes.

* For climbers who know the basics and are ready to venture at higher altitudes* Written by longtime guides and climbing instructors certified by the American Mountain Guide Association (AMGA)* Teaches situational thinking and learning as well as techniqueThis intermediate-level guide addresses tools, skills, and techniques used in alpine terrain including rock, snow, ice, and glaciers at moderate altitude - approximately 5000 meters (16,000 feet) and lower. The technical protection systems are covered, of course. But 30 years of alpine climbing experience has convinced the authors that mastery - and safety - lie in the far more difficult task of knowing exactly which techniques to use, where and when. Therefore, they teach step-by-step decision-making skills, providing scenarios, checklists, and self-posed questions to inform the decision process. Alpine Climbing assumes some prior knowledge, primarily in rock climbing skills and techniques. Basic knots, belaying,rappelling, building rock anchors, leading, placing rock protection, and movement skills on rock: variations of these skills that are of particular value in the alpine environment are addressed in this book.

2019 Banff Mountain Book Competition Category Finalist in Mountain Literature On May 20, 1986, high on Mount Everest, Sharon Wood was ready to give up. Snow plumes swirled off the summit ridge and spilled down the North Face, engulfing her. A four-hundred-foot high rock wall, the crux of the Hornbein Couloir, loomed above—impossible. Then Wood’s partner, Dwayne Congdon, handed her the end of the rope and said, “your lead.” Hours later, at the far too late hour of 9:00 p.m., Wood became the first North American woman to reach the summit, and the first woman in the world to do so via the difficult West Ridge. Their ascent of the West Ridge by a new variation, without Sherpa assistance, is an accomplishment that has never been repeated. In *Rising*, Wood reflects on the seventy days she spent on the mountain and on the pivotal experiences and influences that brought her to that staggeringly beautiful and austere corner of the world. Beyond the physical hardships, she faced personal challenges as an outlier in the male bastion of Himalayan climbing. These were compounded by the vexing presence of her past mentor and lover with his new girlfriend on the American team climbing on the same side of the mountain. It didn’t help that the media pitched the two women as rivals, both vying to become the first North American woman to reach the summit of the highest mountain in the world. Wood rose to all these challenges, finding camaraderie and inspiration among her teammates, particularly in the expedition cook, a strong woman whose perspectives were essential to the team’s remarkable esprit de corps, as well as with “the other woman,” her so-called American rival. *Rising* is both a gripping, adrenalin-filled mountain story and a reflective memoir that reaches beyond the summit to explore a life lived in Everest’s long shadow: unexpected acclaim, outrageous expectations, and personal struggles. As Wood tells her story today, her perspective is steeped in six decades of life experience rich with adventure, change, growth, and humility. It is a tale that feels poignantly relevant—a testament to the strength of the human spirit to overcome all obstacles, whether mountain peaks, social expectations, or self-imposed barriers. *A History in Photographs* Canmore, Alta. : Alpine Club of Canada
On January 20, 2003, at 10:45 a.m., a massive avalanche released from Tumbledown Mountain in the Selkirk Range of British Columbia. Tonnes of snow carried 13 members of two guided backcountry skiing groups down the 37-degree incline of a run called La Traviata and buried them. After a frantic hour of digging by remaining group members, an unthinkable outcome became reality. Seven people were dead. The tragedy made international news, splashing photos of the seven dead Canadian and US skiers on television screens and the pages of newspapers. The official analysis did not specifically note guide error as a contributing factor in the accident. This interpretation has been insufficient for some of the victims’ families, the public and some members of the guiding community. Why did the guiding team seemingly ignore a particularly troublesome snowpack? Why were two groups travelling so close together? Were the guides adhering to best practices for terrain selection and snow stability evaluation? What motivated them to go there? Buried is the assistant guide’s story. It renders an answerable truth about what happened by delving deep into the human factors that played into putting people in harm’s way. The story begins buried metres deep in snow, and through care-filled reflection emerges slowly like spring after a long winter, nurturing a hopeful, courageous dialogue for all who make journeys through the mountains of their life. The story illustrates the peace that comes from accountability and the growth that results from understanding. **For Work at Height** University of Alberta

CLICK HERE to download a portion of the chapter on "Scenarios & Solutions" from Climbing Self-Rescue featuring 5 different scenarios (Provide us with a little information and we'll send your download directly to your inbox) * Climbing self-rescue procedures for teams of two -- the most common climbing party size * Techniques equally effective on rock, snow, and ice * Utilizes gear climbers already carry in their rack * Includes 40 one-page rescue scenarios and solutions for climbing accident analysis The rope is stuck, or too short. A crucial piece of gear is MIA. You’ve wandered off route into dicey terrain. An injury leaves you or your partner in need of help. Climb long enough and finding yourself in a jam far from help is inevitable. In *Climbing: Self Rescue*, two long-time climbing instructors and guides teach how to improvise your own solutions, calling for outside help only when necessary. Because few climbers carry fancy (and expensive) search and rescue gear, all skills taught in this book use the items typically found on a climbing rack: rope, carabiners, slings, and cord. Text, illustrations, and photos explain knots, belaying and hauling systems, rappelling, ascension, passing knots, how to safely assist and rig an injured climber, and more. Roughly half of the book is devoted to real-life climbing scenarios and solutions ranging from moderate to severe. Because real-life situations rarely unfold as they do in practice, Climbing Self-Rescue teaches how to analyze and improvise your way out of a crisis. The Mountaineers Books

Ecology and Wonder celebrates Western Canada's breathtaking landscape. The book makes several remarkable claims. The greatest cultural achievement in the mountain region of western Canada may be what has been preserved, not what has been developed. Protecting the spine of the Rocky Mountains will preserve crucial ecological functions. Because the process of ecosystem diminshment and species loss has been slowed, an ecological thermostat has been kept alive. This may well be an important defence against future impacts of climate change in the Canadian West. **The Mountain Guide Manual** The Rosen Publishing Group, Inc

In May 1993 the British Mountaineering Council met to discuss the future of high altitude tourism. Of concern to attendees were reports of queues on Everest and reference was made to mountaineer Peter Boardman calling Everest an ‘amphitheater of the ego’. Issues raised included environmental and social responsibility and regulations to minimize impacts. In the years that have followed there has been a surge of interest in climbing Everest, with one day in 2012 seeing 234 climbers reach the summit. Participation in mountaineering tourism has surely escalated beyond the imagination of those who

attended the meeting 20 years ago. This book provides a critical and comprehensive analysis of all pertinent aspects and issues related to the development and the management of the growth area of mountaineering tourism. By doing so it explores the meaning of adventure and special reference to mountain-based adventure, the delivering of adventure experience and adventure learning and education. It further introduces examples of settings (alpine environments) where a general management framework could be applied as a baseline approach in mountaineering tourism development. Along with this general management framework, the book draws evidence from case studies derived from various mountaineering tourism development contexts worldwide, to highlight the diversity and uniqueness of management approaches, policies and practices. Written by leading academics from a range of disciplinary backgrounds, this insightful book will provide students, researchers and academics with a better understanding of the unique aspects of tourism management and development of this growing form of adventure tourism across the world.
