Many modern surface coatings and adhesives are derived from fossil feedstocks. With fossil fuels becoming more polluting and expensive to extract as supplies dwindle, industry is turning increasingly to nature, mimicking natural solutions using renewable raw materials and employing new technologies. Highlighting sustainable technologies and applications of renewable raw materials within the framework of green and sustainable chemistry, circular economy and resource efficiency, this book provides a cradle-to-cradle perspective. From potential feedstocks to recycling/reuse opportunities and the de-manufacture of adhesives and solvents, green chemistry principles are applied to all aspects of surface coating, printing, adhesive and sealant manufacture. This book is ideal for students, researchers and industrialists working in green sustainable chemistry, industrial coatings, adhesives, inks and printing technologies.

Creativity in Product Innovation describes a remarkable new technique for improving the creativity process in product design. Certain "regularities" in product development are identifiable, objectively verifiable and consistent for almost any kind of product. These regularities are described by the authors as Creativity Templates. This book describes the theory and implementation of these templates, showing how they can be used to enhance the creative process and thus enable people to be more productive and focused.

Representing the culmination of years of research on the topic of creativity in marketing, the Creativity Templates approach has been recognized as a breakthrough in such journals as Science, Journal of Marketing Research, Management Science, and Technological Forecasting and Social Change.

This book explores the role of phonological templates in early language use from the perspective of usage-based phonology and exemplar models and within the larger developmental framework of Dynamic Systems Theory. After analysing children's first words and their adult targets, Vihman sets out procedures for establishing the children's later prosodic structures and templates, drawing on data from American and British English, Estonian, Finnish, French, Italian, and Welsh; she also provides briefer longitudinal accounts of template use in Arabic and Brazilian Portuguese. The children are found to begin with simple word forms that match their selected adult targets; this is followed by the production of more challenging words, adapted to fit the child's existing patterns. Early accuracy is replaced by later recourse to an 'inner model'--a template--of a favoured word shape. The book also examines the timing, fading, quantification, and function of child phonological templates. In addition, two chapters focus on the use of templates in adult language, in the core grammar and in the more creative morphology of colloquial 'short forms' and hypocoristics in French and Estonian and of English rhyming compounds. The idea of templates is traced back to its origins in Prosodic Morphology, but its uses are most in evidence in the informal settings of adult language 'at play'. Throughout the volume, the discussion returns to the issues of emergent systematicity, the roles of articulatory and memory challenges for children, and the similarities and differences in the function of templates for adults as compared with children.

How would you assemble a machine that can be creative, what would its cogs be? Starting from how humans do creative problem solving, the author has developed a framework to explore whether a diverse set of creative problem-solving tasks can be solved computationally using a unified set of principles. In this book she describes the implementation of related prototype AI systems, and the computational and empirical experiments conducted. The book will be of interest to researchers, graduate students, and laypeople engaged with ideas in artificial intelligence, cognitive science, and creativity.
