I have physical scars from past surgeries, however, I have emotional scars as well. They were buried deep inside (hidden). It wasn't until my mother died was I able to "catch my breath" and to make sense of or process the emotional pain I had endured due to her prescription drug addiction, resulting in my own addictions.

The ocean covers approximately 71% of the Earth's surface, 90% of the biosphere and contains 97% of Earth's water. The Synthetic Aperture Radar (SAR) can image the ocean surface in all weather conditions and day or night. SAR remote sensing on ocean and coastal monitoring has become a research hotspot in geoscience and remote sensing. This book--Progress in SAR Oceanography--provides an update of the current state of the science on ocean remote sensing with SAR. Overall, the book presents a variety of marine applications, such as, oceanic surface and internal waves, wind, bathymetry, oil spill, coastline and intertidal zone classification, ship and other man-made objects' detection, as well as remotely sensed data assimilation. The book is aimed at a wide audience, ranging from graduate students, university teachers and working scientists to policy makers and managers. Efforts have been made to highlight general principles as well as the state-of-the-art technologies in the field of SAR Oceanography.

Describes the types of information available from spaceborne images of the ocean.  
Pesticide Enforcement Policy Statement[s] CRC Press  
A critical and comprehensive look at current state-of-the-art scientific and translational research being conducted internationally, in academia and industry, to address new ways to provide effective treatment to victims of ischemic and hemorrhagic stroke and other ischemic diseases. Currently stroke can be successfully treated through the administration of a thrombolytic, but the therapeutic window is short and many patients are not able to receive treatment. Only about 30% of patients are "cured" by available treatments. In 5 sections, the proposed volume will explore historical and novel neuroprotection mechanisms and targets, new and combination therapies, as well as clinical trial design for some of the recent bench-side research.

Many inherited diseases are due to enzyme deficiencies located within the subcellular 'organelles'. Such diseases can have devastating effects such as mental impairment, muscle wasting or retarded growth. Early and correct diagnosis is vital so that appropriate care can be given. This book will be the first to provide a comprehensive coverage of these conditions with emphasis both on clinical and laboratory recognition. This unique book provides a compendium of how to recognize organelle diseases and how to confirm their diagnosis using clinical,

medical and laboratory procedures. The chapters on basic biology explain the basic function of each organelle and explains how each group of diseases may be caused.

Molecular, Genetic, and Nutritional Aspects of Major and Trace Minerals is a unique reference that provides a complete overview of the non-vitamin micronutrients, including calcium, copper, iodine, iron, magnesium, manganese, molybdenum, phosphorus, potassium, selenium, sodium, and zinc. In addition, the book covers the nutritional and toxicological properties of nonessential minerals chromium, fluoride and boron, and silicon and vanadium, as well as ultra-trace minerals and those with no established dietary requirement for humans. Users will find in-depth chapters on each essential mineral and mineral metabolism, along with discussions of dietary recommendations in the United States and around the world. Presents the only scientific reference to cover all of the nutritionally relevant essential major and trace minerals Provides a broad introductory chapter on each mineral to give readers valuable background and context Clarifies the cellular and molecular aspects of each mineral and its genetic and genomic aspects Includes coverage of all nutritionally relevant minerals—essential major trace minerals and ultra-trace minerals Underscores the important interactions between minerals so readers learn how metabolism of one mineral influences another

Bladder cancer is the second most common genitourinary malignancy, with 81,190 estimated new diagnoses in 2018, in the United States alone. Transurethral resection of the bladder and radical cystectomy with bilateral pelvic lymph node dissection constitute the standard treatment for non-muscle invasive or very high-risk non-muscle invasive bladder cancer, respectively. However, survival expectations have not shown to improve in the last 20 years, and new diagnostic and therapeutic tools are urgently needed to improve the outcomes of this potentially lethal disease.
