Many inherited diseases are due to enzyme deficiencies located within the subcellular 'organelles'. Such diseases can have devastating

effects such as mental impairment, muscle wasting or retarded growth. Early and correct diagnosis is vital so that appropriate care can be given. This book will be the first to provide a comprehensive coverage of these conditions with emphasis both on clinical and laboratory recognition. This unique book provides a compendium of how to recognize organelle diseases and how to confirm their diagnosis using clinical, medical and laboratory procedures. The chapters on basic biology explain the basic function of each organelle and explains how each group of diseases may be caused.

Bladder cancer is the second most
common genitourinary malignancy,
with 81,190 estimated new
diagnoses in 2018, in the United
States alone. Transurethral

resection of the bladder and radical cystectomy with bilateral pelvic lymph node dissection constitute the standard treatment for non-muscle invasive or very high-risk non-muscle invasive bladder cancer, respectively. However, survival expectations have not shown to improve in the last 20 years, and new diagnostic and therapeutic tools are urgently needed to improve the outcomes of this potentially lethal disease.

In addition it also examines the complex morphology, cultivation, harvesting, and processing of cannabis and the ways in which the plant's chemical composition can be controlled. As well as offering a raft of scientific information there is extensive coverage of cannabinoid-based medicines.

Helping readers to identify and evaluate their benefits, chapters explore pharmacological actions and the effects that seem to underlie approved therapeutic uses, how they are currently used to treat certain disorders, and the ever-growing number of wide-ranging potential clinical applications. There is also coverage of both the legal and illegal sources of cannabis, including 'coffee shops' and

'cannabis dispensaries'. The complex issue of 'recreational cannabis' is also tackled.

A critical and comprehensive look at current state-of-the-art

scientific and translational research being conducted internationally, in academia and industry, to address new ways to provide effective treatment to victims of ischemic and hemorrhagic stroke and other ischemic diseases. Currently stroke can be successfully treated through the administration of a thrombolytic, but the therapeutic window is short and many patients are not able to receive treatment. Only about 30% of patients are "cured" by available treatments. In 5 sections, the proposed volume will explore historical and novel neuroprotection mechanisms and targets, new and combination therapies, as well as clinical trial design for some of the recent

bench-side research.
