Invention and innovation are what distinguish the human race from all of the other species on Earth. Throughout history the imagination and pioneering spirit of human kind has compelled us to question why we do things in a certain way and, more importantly, how we can do things better. Celebrating the ingenuity, creativity and resourcefulness that has led to some of the most amazing technological leaps through the ages, Breverton's Encyclopedia of Inventions examines the key innovations and breakthroughs of all time and the genius behind them. Starting with the building of the pyramids in ancient Egypt and the discovery of the solar system, moving through surgery, dynamite and rockets, to modern technology such as the smart card and genetic engineering, Terry Breverton springs many surprises. He uncovers fascinating and little-

known facts: for example, that Price, not Fleming, discovered penicillin; that Swan, not Edison invented the electric light, and that Wallace, not Darwin first advanced the theory of evolution. Tracing the sheer persistence of brilliant men and women across the globe, who fought the prevailing ideas of their times and advanced technology, Breverton's Encyclopedia of Inventions will inspire anyone interested in the history and developments that have changed our lives and shaped our planet's future.
