In 1965, the Hart-Cellar Immigration Reform Act ushered in a huge wave of immigrants from across the Caribbean—Jamaicans, Cubans, Haitians, and Dominicans, among others. How have these immigrants and their children negotiated languages of race and ethnicity in American social and cultural politics? As black immigrants, to which America do they assimilate? *Constructing Black Selves* explores the cultural production of second-generation Caribbean immigrants in the United States after World War II as a prism for understanding the formation of Caribbean American identity. Lisa D. McGill pays particular attention to music, literature, and film, centering her study around the figures of singer-actor Harry Belafonte, writers Paule Marshall, Audre Lorde, and Piri Thomas, and meringue-hip-hop group Proyecto Uno. Illuminating the ways in which Caribbean identity has been transformed by mass migration to urban landscapes, as well as the dynamic and sometimes conflicted relationship between Caribbean American and African American cultural politics, *Constructing Black Selves* is an important contribution to studies of twentieth century U.S. immigration, African American and Afro-Caribbean history and literature, and theories of ethnicity and race.

Always dispose of oily shop cloths in an enclosed container to prevent a fire. SEE FIGURE 1-69. Whenever oily cloths are thrown together on the floor or workbench, a chemical reaction can occur, which can ignite the cloth even without an open flame. This process of ignition without an open flame is called spontaneous combustion A customer complained that after driving for a while, he got a static shock whenever he grabbed the door handle when exiting the vehicle. The customer thought that there must be an electrical fault and that the shock was coming from the vehicle itself. In a way, the shock was caused by the vehicle, but it was not a fault. The service technician sprayed the cloth seats with an anti-static spray and the problem did not reoccur. Obviously, a static charge was being created by the movement of the driver's clothing on the seats and discharged when the driver touched the metal door handle"--
